Seiko Instruments Inc.

Voltage Detectors

Next-generation flagship model voltage detector

Ultra-low current consumption

350nA typ. S-1000 Series

350nA

±1.0%

Incredible low current consumption of 350 nA

The S-1000 achieves an **ultra-low current consumption of 350 nA (typ.)** due to a new fine process technology and optimized circuit design, while maintaining a **response speed equivalent to that of the S-808xxC**.

Ultra-high detection voltage accuracy of ±1.0%

The ±1.0% ultra-high detection voltage accuracy achieved by the S-1000 enables highly accurate detection of the battery (power supply) voltage.

From SII with recognized No. 1 global share^{Note}

Note SII's share in the CMOS voltage detector market;
data taken from SII market research.

Voltage Regulators

Rich lineup of highly innovative voltage regulators

±1.0%

High output voltage accuracy

S-1111/21	S-1112/22	S-1167	S-1323	S-T111
S-L2985	S-1200	S-1165	S-1131	S-1132
S-1170	S-1701	S-1711		

9 µA (70 dB)/50 µA (80 dB)

High ripple rejection ratio and low current consumption

9 µA typ. (70 dB, Cout=1 µF)	S-1167
18 µA typ. (70 dB, Cout=0.1 µF)	S-1200
20 µA typ. (70 dB, Cout=0.1 µF)	S-1132
50 µA typ. (80 dB)	S-1112/22 S-T111 S-L2985

0.1 µF/0.47 µF Ceramic capacitors

Small external input/output ceramic capacitors with high level of safety

0.1 µF Input/output	S-T111	S-1200	S-1132
0.47 µF Output	S-1112/22	S-L2985	

SNT/HSON/WLP

Wide range of small packages available
Ultra-small SNT package used in many products

SNT-4A	S-817	S-1323
SNT-6A	S-1711	
SNT-6A(H)	S-812C	S-1112 S-1167 S-1200
	S-1132	

80/70 dB

High ripple rejection ratio

80 dB	S-1112/22	S-T111	S-L2985
70 dB	S-1111/21	S-1167	S-1323
	S-L2980	S-1165	S-1131
	S-1170	S-1701	S-1711

~800 mA

CMOS voltage regulator with 800 mA high output current

~800 mA	S-1170
~300 mA	S-1131 S-1132

500 mW (SNT-6A (H))

Small package and high power dissipation

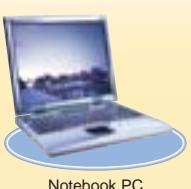

SNT-4A (1.2x1.6 mm)	300 mW (when mounted on PCB)
SNT-6A (1.6x1.8 mm)	400 mW (when mounted on PCB)
SNT-6A(H) (1.6x1.8 mm)	500 mW (when mounted on PCB)

0.4 Ω/0.7 Ω

Low on-resistance (low dropout voltage)
Battery can be used up completely, extending the battery life

0.4 Ω	S-1170
0.7 Ω	S-1165

Notebook PC

Mobile phone

PDA

Electric shaver

Game

SII IC Product Web site

The screenshot shows the main interface of the SII IC Product Web site. At the top, there's a navigation bar with links for "Product Information", "Design & Applications", "Technical Support", "Buy", and "About SII". Below the navigation, there's a search bar with the placeholder "What are you searching?". The "Design & Applications" section contains links for "Evaluation Circuits" and "Evaluation Tools". The "Technical Support" section includes links for "FAQ", "Technical Question Form", "Forum", and "Technical Test Results". The "Buy" section lists "Sales Office" and "Contact Us". The "About SII" section includes "Corporate Profile" and "Event Information". On the left side, there's a sidebar for "New Products" with several items listed, and a "Topics & Events" sidebar with links to various news items. The bottom of the page has a footer with links to "SII Home", "Product Pages", "Topics & Events", "Press Releases", and "SII Inductance Inc. All Rights Reserved".

**All the support you
need for selecting
the best products!
Full of hints!**

- **Extensive range of data sheets and support information**

Data sheets and technical details of new products and products listed in this catalog are downloadable.

- **Easy search of product information from various design support pages**

Set search conditions to make it even easier to find what you are looking for.

- **Environment information**

Provides latest response status to environmental measures, such as lead-free products or the RoHS Directive that will be even more important.

- **Wealth of up-to-the-minute information on the latest products and more**

Get the latest information in a timely manner.

- **GTSCAT Switching regulator simulator**

This is a tool for supporting the design of circuits to be used with switching regulators.

This software quickly analyses the performance of switching regulators made or sold by SII in the standard circuits.

<Types of analysis>

- Analysis of steady state waveforms
- Analysis of how efficiency and output voltage depend on output current
- Analysis of transient response during power on
- Analysis of transient response during input voltage fluctuation
- Analysis of transient response during load current fluctuation

Simulation results are clearly shown in a graph.

- **Delivers information covering a wide variety of information and events**

Carries important announcements

- **Web pages fully written in Chinese (simplified) are also provided.**

Secondary protection		S-8244 series	74	

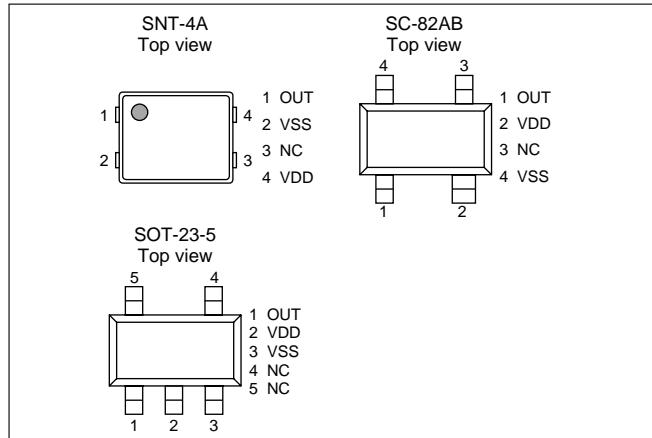

New : New product *1. S-1112 series only

ULTRA-SMALL PACKAGE HIGH-PRECISION VOLTAGE DETECTOR

S-1000 series

The S-1000 series is a series of high-precision voltage detectors developed using CMOS process. The detection voltage is fixed internally with an accuracy of $\pm 1.0\%$. It operates with low current consumption of 350 nA typ. Two output forms, Nch open-drain and CMOS output, are available. CMOS voltage detector, S-1000 Series is the most suitable for the portable equipments with ultra low current consumption, high precision and corresponding to the small package.

PIN CONFIGURATIONS

SELECTION GUIDE

Detection voltage	Open-drain (Nch open-drain) [low]			Push-pull (CMOS output) [low]

FEATURES

- low current consumption:
350 nA (0.35 μ A) typ.
(V_{DD} = detection voltage + 1.5 V)
- Detection voltage accuracy: $\pm 1.0\%$
- Operating voltage range: 0.95 to 5.5 V
- Hysteresis: 5% typ.
- Detection voltage: 1.5 to 4.6 V (0.1 V steps)
- Output type: Active low Open-drain (Nch open-drain) output
Active low Push-pull (CMOS output)

APPLICATIONS

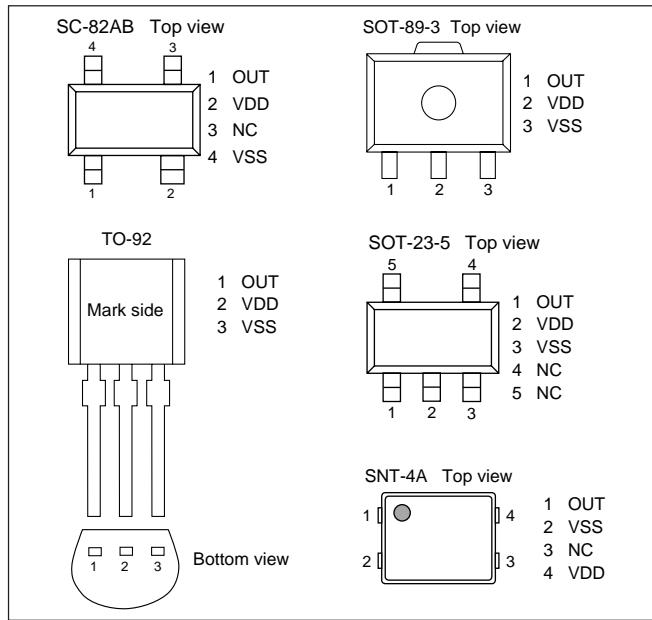

- Power monitor for microcomputers and reset for CPUs.
- Power monitor for portable equipments such as cellular phones, digital still cameras and PDAs.
- Constant voltage power monitor for cameras, video equipments and communication devices.

SUPER-SMALL PACKAGE HIGH-PRECISION VOLTAGE DETECTOR

S-808xxC series

The S-808xxC series is a family of high-precision voltage detectors, developed using CMOS technology. The detection voltage is fixed and its accuracy is $\pm 2.0\%$. Five package types are available for various uses. Open-drain (Nch open-drain) output and Push-pull (CMOS output) are available.

■ PIN CONFIGURATIONS

■ FEATURES

- Ultra-low current consumption:
1.3 μ A typ.
(Detection voltage 1.4 V typ. or below models, $V_{DD} = 1.5$ V)
0.8 μ A typ.
(Detection voltage 1.5 V typ. or above models, $V_{DD} = 3.5$ V)
- Detection voltage accuracy: $\pm 2.0\%$
- Operating voltage range:
0.65 to 5.0 V (Detection voltage 1.4 V typ. or below models)
0.95 to 10.0 V (Detection voltage 1.5 V typ. or above models)
- Hysteresis: 5% typ.
- Detection voltage: 0.8 to 6.0 V (0.1 V steps)
- Output type: Active low Open-drain (Nch open-drain) output
Active low Push-pull (CMOS output)

■ APPLICATIONS

- Battery checker
- Power failure detector
- Power supply monitor for portable equipment such as pagers, pocket calculators, electronic organizers, remote controllers
- Constant voltage power supply monitor for cameras, video equipment, communication devices
- Power supply monitor for microcomputers and reset for CPUs

*1. "X" in the model number of TO-92 differs as follows:

B: Bulk, T: Tape and reel (2000/reel), Z: Tape and ammo (2500/reel)

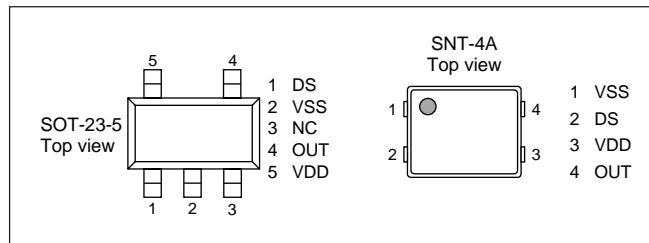

*2. Describes the release voltage.

SUPER-SMALL PACKAGE HIGH-PRECISION VOLTAGE DETECTOR WITH DELAY CIRCUIT (INTERNAL DELAY TIME SETTING)

S-801 series

The S-801 series is a high-precision voltage detector with a fixed delay time generator, developed using CMOS technology. The detection voltage is fixed internally with a precision of $\pm 2.0\%$. An integrated oscillator and counter timer make it possible to delay the release signal without using external components. One of three delay times can be selected. Open-drain (Nch open-drain) output and Push-pull (CMOS output) are available.

PIN CONFIGURATIONS

SELECTION GUIDE (1) SOT-23-5 (3000/reel)

Detection voltage	Delay time (typ.)	Open-drain (Nch open-drain) [low]	Push-pull (CMOS output) [low]	Detection voltage	Delay time (typ.)	Open-drain (Nch open-drain) [low]	Push-pull (CMOS output) [low]

FEATURES

- Ultra-low current consumption: $1.3 \mu\text{A}$ typ. ($V_{DD} = 3.5 \text{ V}$)
- Detection voltage accuracy: $\pm 2.0\%$
- Hysteresis: 60 mV typ.
- Three delay times: 50 ms typ. (A series)
 100 ms typ. (B series)
 200 ms typ. (C series)
- Delay time ON/OFF switch available (DS pin).
- Operating voltage range: 0.95 to 10.0 V
- Detection voltage: 2.2 to 6.0 V (0.1 V steps)
- Output type: Active-low Open-drain (Nch open-drain) output
Active-low Push-pull (CMOS output)

APPLICATIONS

- Power supply monitor for portable equipment such as notebook PCs, digital still cameras, PDAs, and cellular phones
- Constant voltage power supply monitor for cameras, video equipment and communication devices
- Power supply monitor for microcomputers and reset for CPUs

POWER SUPPLY ICS Voltage Detectors

SUPER-SMALL PACKAGE HIGH-PRECISION VOLTAGE DETECTOR WITH DELAY CIRCUIT (EXTERNAL DELAY TIME SETTING)

S-809xxC series

The S-809xxC series is a family of high-precision voltage detectors, developed using CMOS technology. The detection voltage is fixed and its accuracy is $\pm 2.0\%$.

The release signal can be delayed by an external capacitor. Open-drain (Nch open-drain) output and Push-pull (CMOS output) are available.

PIN CONFIGURATIONS

SELECTION GUIDE

Detection voltage	Hysteresis width (typ.)	Open-drain (Nch open-drain) [low]			Push-pull (CMOS output) [low]

FEATURES

- Ultra-low current consumption:
1.0 μ A typ.
(Detection voltage 1.4 V typ. or below models, VDD = 2.0 V)
1.1 μ A typ.
(Detection voltage 1.5 V typ. or above models, VDD = 3.5 V)
- Detection voltage accuracy: $\pm 2.0\%$
- Operating voltage range: 0.7 to 10.0 V
- Hysteresis: 5% typ.
- Detection voltage: 1.3 to 6.0 V (0.1 V steps)
- Output type: Active-low Open-drain (Nch open-drain) output
Active-low Push-pull (CMOS output)

APPLICATIONS

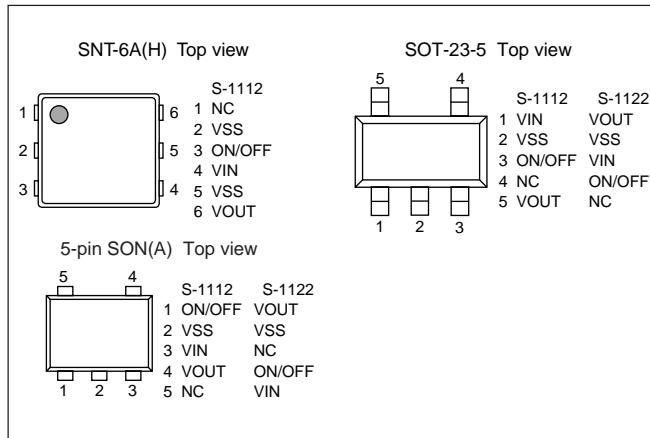

- Power supply monitor for portable applications such as notebook PCs, digital still cameras, PDAs, and cellular phones
- Constant voltage power supply monitor for cameras, video equipment, communication devices
- Power supply monitor for microcomputers and reset for CPUs

TO 150 mA OUTPUT CURRENT HIGH RIPPLE REJECTION AND LOW DROPOUT CMOS VOLTAGE REGULATOR

S-1112/1122 series

The S-1112/1122 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. A built-in overcurrent protection circuit prevents the load current from exceeding the current capacitance of the output transistor. Moreover, the battery life can be extended by using the power-on/off circuit. A greater variety of capacitors can be used with this series compared with existing voltage regulators developed using CMOS technology, including a small ceramic capacitor. Small SOT-23-5, SNT-6A(H) and 5-pin SON(A) packages realize high-density mounting.

■ PIN CONFIGURATIONS

■ FEATURES

- Low current consumption
50 μ A typ., 90 μ A max. (during operation)
0.1 μ A typ., 1 μ A max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: $\pm 1.0\%$
- Output current
150 mA capable (product with 3.0 V output, when $V_{IN} = 4\text{ V}$)¹
- Dropout voltage
190 mV typ. (product with 3.0 V output, when $I_{OUT} = 100\text{ mA}$)
- Ripple rejection rate: 80 dB typ. ($f = 1\text{ kHz}$, $V_{OUT} = 3\text{ V}$)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Output capacitor: Use of a ceramic capacitor of 0.47 μ F or more is possible.

¹1. Attention should be paid to the power dissipation of the package when the load is large.

■ APPLICATIONS

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances
- Constant voltage power supply for cellular phones

■ SELECTION GUIDE

TO 150 mA OUTPUT CURRENT HIGH RIPPLE REJECTION AND LOW DROPOUT CMOS VOLTAGE REGULATOR

S-T111 series

The S-T111 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. A built-in overcurrent protection circuit prevents the load current from exceeding the current capacitance of the output transistor. Moreover, the battery life can be extended by using the power-on/off circuit. A greater variety of capacitors can be used with this series compared with existing voltage regulators developed using CMOS technology, including a small ceramic capacitor. The small SOT-23-5 package realizes high-density mounting.

Remark Please contact our sales office if you desire a product with an inverted ON/OFF pin logic.

FEATURES

- Low current consumption
50 µA typ., 90 µA max. (during operation)
0.1 µA typ., 1 µA max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: ±1.0%
- Output current
150 mA capable (product with 3.0 V output, when $V_{IN} = 4 V$)^{*1}
- Dropout voltage
190 mV typ. (product with 3.0 V output, when $I_{OUT} = 100 mA$)
- Ripple rejection rate: 80 dB typ. ($f = 1 kHz$, $V_{OUT} = 3 V$)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Input/output capacitor: Use of a ceramic capacitor of 0.1 µF or more is possible.

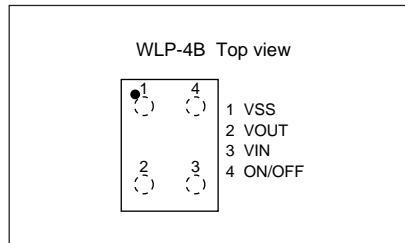

^{*1}1. Attention should be paid to the power dissipation of the package when the load is large.

APPLICATIONS

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances
- Constant voltage power supply for cellular phones

TO 150 mA OUTPUT CURRENT**HIGH RIPPLE REJECTION, WLP PACKAGE AND LOW DROPOUT CMOS VOLTAGE REGULATOR****S-L2985 series**

The S-L2985 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. A built-in overcurrent protection circuit prevents the load current from exceeding the current capacitance of the output transistor. Moreover, the battery life can be extended by using the power-on/off circuit. A greater variety of capacitors can be used with this series compared with existing voltage regulators developed using CMOS technology, including a small ceramic capacitor. The super-small WLP-4B package realizes high-density mounting.

Remark Please contact our sales office if you desire a product with an inverted ON/OFF pin logic.

FEATURES

- Low current consumption
35 μA typ., 65 μA max. (during operation)
0.1 μA typ., 1 μA max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: ±1.0%
- Output current
150 mA capable (product with 3.0 V output, when V_{IN} = 4 V)*1
- Dropout voltage
200 mV typ. (product with 3.0 V output, when I_{OUT} = 100 mA)
- Ripple rejection rate: 70 dB typ. (f = 1 kHz, V_{OUT} = 3 V)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit

APPLICATIONS

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances
- Constant voltage power supply for cellular phones

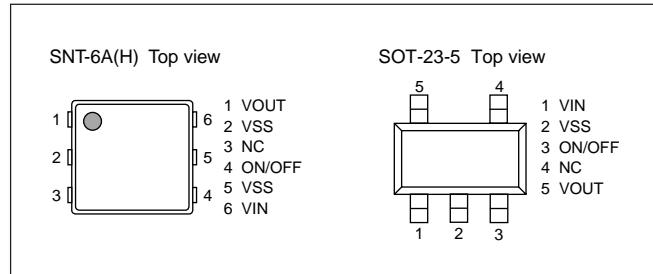

TO 150 mA OUTPUT CURRENT**ULTRA LOW CURRENT CONSUMPTION, HIGH RIPPLE REJECTION AND LOW DROPOUT CMOS VOLTAGE REGULATOR****S-1167 series**

The S-1167 series is a positive voltage regulator with ultra low current consumption, high ripple rejection, low drop voltage and high output voltage accuracy developed based on CMOS technology.

Although current consumption is very small with 9 μ A typ., S-1167 series realized the 70 dB of high ripple rejection rate. Besides a 1.0 μ F ceramic capacitor is available as an input-and-output capacitor.

Moreover, dropout voltage is also small since output voltage accuracy realizes $\pm 1.0\%$ of high accuracy, and the low-on-resistance transistor is built-in. A built-in Output current protector prevents the load current from exceeding the current capacitance of the output transistor. A shutdown circuit ensures long battery life.

Two packages, SOT-23-5 and SNT-6A(H), are available. Compared with the voltage regulators using the conventional CMOS process, S-1167 Series is the most suitable for the portable equipments with ultra low current consumption and corresponding to the small package.

Remark Please contact our sales office if you desire a product with an inverted ON/OFF pin logic.

■ FEATURES

- Low current consumption
9 μ A typ., 16 μ A max. (during operation)
0.1 μ A typ., 0.9 μ A max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: $\pm 1.0\%$
- Output current
150 mA capable (product with 3.0 V output, when V_{IN} = 4 V)*1
- Dropout voltage
150 mV (product with 3.0 V output, when I_{OUT} = 100 mA)
- Ripple rejection rate: 70 dB typ. (f = 1 kHz, V_{OUT} = 3 V)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Input/output capacitor: Use of a ceramic capacitor of 1.0 μ F or more is possible.

*1. Attention should be paid to the power dissipation of the package when the load is large.

■ APPLICATIONS

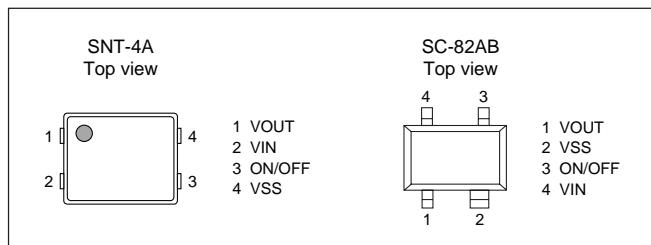

- Power supply for battery-powered devices
- Power supply for cellular phones
- Power supply for portable equipments

TO 150 mA OUTPUT CURRENT HIGH RIPPLE REJECTION AND SMALL PACKAGE CMOS VOLTAGE REGULATOR

S-1323 series

The S-1323 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. A built-in overcurrent protection circuit prevents the load current from exceeding the current capacitance of the output transistor. Moreover, the battery life can be extended by using the power-on/off circuit. A small SNT-4A and SC-82AB package realizes high-density mounting.

PIN CONFIGURATIONS

FEATURES

- Low current consumption
70 μ A typ., 90 μ A max. (during operation)
0.1 μ A typ., 1 μ A max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: $\pm 1.0\%$
- Output current
150 mA capable (product with 3.0 V output, when $V_{IN} = 4$ V)*1
- Dropout voltage
500 mV typ. (product with 3.0 V output, when $I_{OUT} = 150$ mA)
- Ripple rejection rate: 70 dB typ. ($f = 1$ kHz, $V_{OUT} = 3$ V)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Input/output capacitor: Use of a ceramic capacitor of 1.0 μ F or more is possible.

*1. Attention should be paid to the power dissipation of the package when the load is large.

APPLICATIONS

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances
- Constant voltage power supply for cellular phones

**TO 150 mA OUTPUT CURRENT, 10 V INPUT VOLTAGE
HIGH RIPPLE REJECTION LOW DROPOUT LOW INPUT AND OUTPUT CAPACITANCE CMOS VOLTAGE REGULATOR**
S-1200 series

The S-1200 series is a positive voltage regulator with a low dropout voltage, high output voltage accuracy developed based on CMOS technology.

A 0.1 μ F small ceramic capacitor can be used. It operates with low current consumption of 18 μ A typ.

A built-in Output current protector prevents the load current from exceeding the current capacitance of the output transistor.

Compared with the voltage regulators using the conventional CMOS process, small ceramic capacitors are also available. Furthermore a small SNT-6A(H) and SOT-23-5 packages realize high-density mounting.

Remark Please contact our sales office if you desire a product with an inverted ON/OFF pin logic.

■ FEATURES

- Input voltage: 2 to 10 V
- Low current consumption
18 μ A typ., 40 μ A max. (during operation)
0.01 μ A typ., 1 μ A max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: $\pm 1.0\%$
- Output current
150 mA capable (product with 3.0 V output, when $V_{IN} = 4 V$)¹
- Dropout voltage
140 mV typ. (product with 3.0 V output, when $I_{OUT} = 100 mA$)
- Ripple rejection rate: 70 dB typ. ($f = 1$ kHz, $V_{OUT} = 3 V$)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Input/output capacitor: Use of a ceramic capacitor of 0.1 μ F or more is possible.

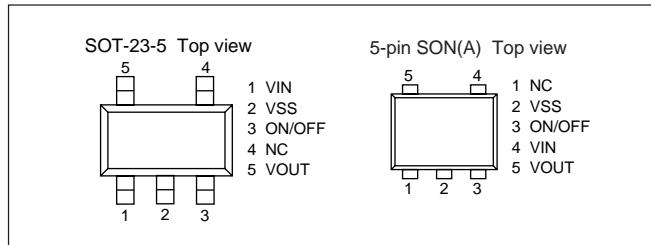

*1. Attention should be paid to the power dissipation of the package when the load is large.

■ APPLICATIONS

- Power supply for battery-powered devices
- Power supply for personal communication devices
- Power supply for home electric/electronic appliances
- Power supply for cellular phones

**TO 150 mA OUTPUT CURRENT, 10 V INPUT VOLTAGE
HIGH RIPPLE REJECTION AND LOW DROPOUT CMOS VOLTAGE REGULATOR**
S-L2980 series

The S-L2980 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. Moreover, the battery life can be extended by using the power-on/off circuit. A greater variety of capacitors can be used with this series compared with existing voltage regulators developed using CMOS technology, including a small ceramic capacitor.

■ FEATURES

- Input voltage: 2 to 10 V
- Low current consumption
90 µA typ., 140 µA max. (during operation)
0.1 µA typ., 1 µA max. (during power-off)
- Output voltage: 1.5 to 6.0 V (selectable in 0.1 V steps)
- Output voltage accuracy: ±2.0%
- Output current
150 mA capable (product with 3.0 V output, when V_{IN} = 4 V)*1
- Dropout voltage
120 mV typ. (product with 3.0 V output, when I_{OUT} = 50 mA)
- Ripple rejection rate: 70 dB typ. (f = 1 kHz, V_{OUT} = 3 V)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in short-circuit protection circuit
- Use of a low ESR capacitor is possible.
- Output capacitor: Use of a ceramic capacitor of 1.0 µF or more is possible.

*1. Attention should be paid to the power dissipation of the package when the load is large.

■ APPLICATIONS

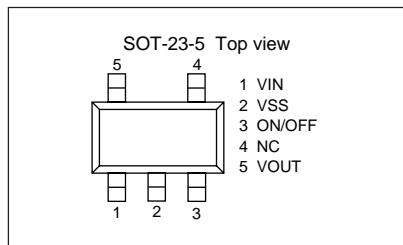

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances
- Constant voltage power supply for cellular phones

TO 200 mA OUTPUT CURRENT HIGH RIPPLE REJECTION AND LOW DROPOUT CMOS VOLTAGE REGULATOR

S-1165 series

The S-1165 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. A built-in overcurrent protection circuit prevents the load current from exceeding the current capacitance of the output transistor. Moreover, the battery life can be extended by using the power-on/off circuit. A small SOT-23-5 package realizes high-density mounting.

■ PIN CONFIGURATIONS

■ FEATURES

- Low current consumption
35 μ A typ., 65 μ A max. (during operation)
0.1 μ A typ., 1 μ A max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: $\pm 1.0\%$
- Output current
200 mA capable (product with 3.0 V output, when $V_{IN} = 4 V$)^{*1}
- Dropout voltage
140 mV typ. (product with 3.0 V output, when $I_{OUT} = 200 \text{ mA}$)
- Ripple rejection rate: 70 dB typ. ($f = 1 \text{ kHz}$, $V_{OUT} = 3 \text{ V}$)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit

TO 300 mA OUTPUT CURRENT

HIGH RIPPLE REJECTION AND LOW DROPOUT MIDDLE-OUTPUT CURRENT CMOS VOLTAGE REGULATOR

S-1131 series

The S-1131 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. A built-in overcurrent protection circuit prevents the load current from exceeding the current capacitance of the output transistor. Small SOT-89-3, SOT-89-5, and 6-pin HSON(A) packages realize high-density mounting.

TO 300 mA OUTPUT CURRENT**HIGH RIPPLE REJECTION LOW DROPOUT MIDDLE OUTPUT CURRENT CMOS VOLTAGE REGULATOR****S-1132 series**

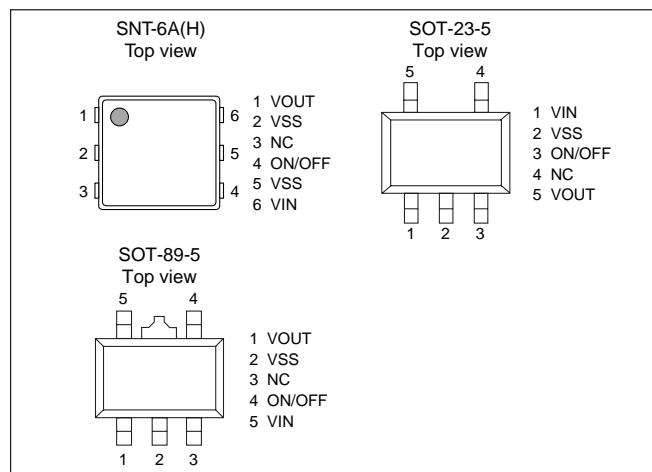

The S-1132 series is a positive voltage regulator with a low dropout voltage, high output voltage accuracy, and low current consumption (300 mA output current) developed based on CMOS technology.

A 0.1 μ F small ceramic capacitor can be used. It operates with low current consumption of 20 μ A typ.

A built-in Output current protector prevents the load current from exceeding the current capacitance of the output transistor.

Compared with the conventional 300 mA output current CMOS voltage regulators, high-density mounting is realized by using the super-small SNT-6A(H) package and a 0.1 μ F small ceramic capacitor.

Also, the low current consumption makes the S-1132 series ideal for mobile devices.

Remark Please contact our sales office if you desire a product with an inverted ON/OFF pin logic.

FEATURES

- Low current consumption
20 μ A typ., 40 μ A max. (during operation)
0.01 μ A typ., 1 μ A max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: \pm 1.0%
- Output current
300 mA capable (product with 3.0 V output, when V_{IN} = 4 V)*1
- Dropout voltage
130 mV typ. (product with 3.0 V output, when I_{OUT} = 100 mA)
- Ripple rejection rate: 70 dB typ. (f = 1 kHz, V_{OUT} = 3 V)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Input/output capacitor: Use of a ceramic capacitor of 0.1 μ F or more is possible.

*1. Attention should be paid to the power dissipation of the package when the load is large.

APPLICATIONS

- Power supply for battery-powered devices
- Power supply for personal communication devices
- Power supply for home electric/electronic appliances
- Power supply for cellular phones

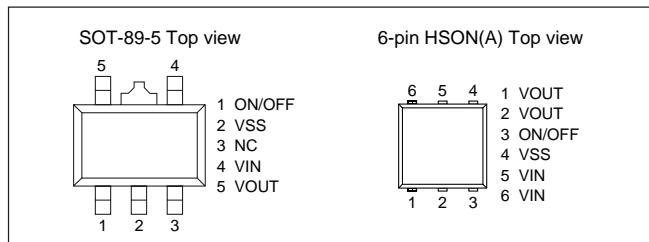

TO 800 mA OUTPUT CURRENT

HIGH RIPPLE REJECTION AND LOW DROPOUT HIGH-OUTPUT CURRENT CMOS VOLTAGE REGULATOR

S-1170 series

The S-1170 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy, and low current consumption, and has been developed using CMOS technology. Since a low on-resistance transistor is incorporated, the dropout voltage is small, and a large output current can be obtained. A built-in overcurrent protection circuit prevents the load current from exceeding the current capacitance of the output transistor, and a built-in thermal shunt circuit prevents damage due to heat generation. Small SOT-89-5 and 6-pin HSON(A) packages realize high-density mounting.

Remark Please contact our sales office if you desire a product with an inverted ON/OFF pin logic.

FEATURES

- Low current consumption
80 µA typ., 160 µA max. (during operation)
0.1 µA typ., 1 µA max. (during power-off)
 - Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
 - High output voltage accuracy: ±1.0%
 - Output current
800 mA capable (product with 3.0 V output, when V_{IN} = 4 V)*1
 - Dropout voltage
120 mV typ. (product with 3.0 V output, when I_{OUT} = 300 mA)
 - Ripple rejection rate: 70 dB typ. (f = 1 kHz, V_{OUT} = 3.0 V)
 - Built-in power-off circuit: Selection of positive/negative logic is possible.
 - Built-in overcurrent protection circuit
 - Built-in thermal shunt circuit
 - Input/output capacitor: Use of a ceramic capacitor of 4.7 µF or more is possible.
- *1. Attention should be paid to the power dissipation of the package when the load is large.

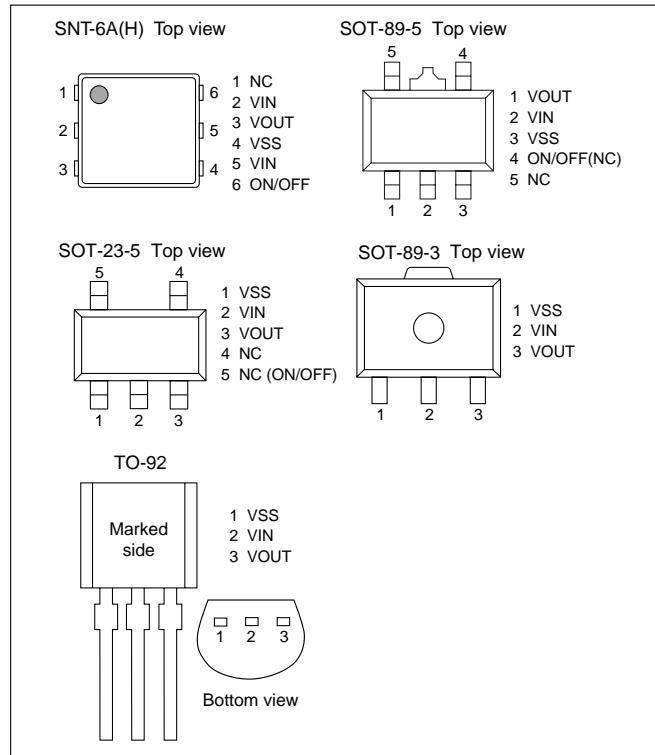

APPLICATIONS

- Constant voltage power supply for DVD drives and CD-ROM drives
- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for notebook PCs

HIGH OPERATING VOLTAGE CMOS VOLTAGE REGULATOR**S-812C series**

The S-812C series is a high operating voltage LDO voltage regulator developed using CMOS technology. The maximum operating voltage of the S-812C series is 16 V, making it ideal for high voltage applications. The low current consumption and power-off function of the S-812C series also make it suitable for portable devices that require low current consumption.

The S-812C series can be used with ceramic capacitors.

■ PIN CONFIGURATIONS**■ FEATURES**

- Low current consumption: 1.0 μ A typ., 1.8 μ A max.
(3.0 V output product, during operation)
- Output voltage range: 2.0 V to 6.0 V
(Selectable in 0.1 V steps)
- Output voltage accuracy: $\pm 2.0\%$
- Input voltage: 16 V max.
- Output current
 - 50 mA capable (3.0 V output product, when $V_{IN} = 5$ V)*1
 - 75 mA capable (5.0 V output product, when $V_{IN} = 7$ V)*1
- Dropout voltage: 120 mV typ.
($V_{OUT} = 5.0$ V, $I_{OUT} = 10$ mA)
- Output capacitor: A ceramic capacitor can be used.
- Built-in shutdown circuit: Shutdown on/off function and output signal polarity (positive/negative) are selectable.
- Short-circuit protection: Function selectable
Short-circuit current: 40 mA typ.
(With protection function)

*1. Attention should be paid to the power dissipation of the package when the load is large.

SUPER-SMALL PACKAGE VOLTAGE REGULATOR**S-817 series**

The S-817 series is a 3-terminal positive voltage regulator, developed using CMOS technology.

The small SNT-4A package (1.6 x 1.2 mm) and SC-82AB package (2.0 x 2.1 mm) of the S-817A series is ideal for designing small portable devices. Small ceramic capacitors can be used as the output capacitor, and the S-817 series provides stable operation with low loads down to 1 μ A. The S-817B series does not include a short-circuit protection circuit.

The S-817B series is available in four packages: SNT-4A, SC-82AB, SOT-23-5, TO-92 and SOT-89-3.

■ PIN CONFIGURATIONS**■ FEATURES**

- Low current consumption: 1.2 μ A typ., 2.5 μ A max. (during operation)
- Output voltage: 1.1 to 6.0 V (selectable in 0.1 V steps)
- Output voltage accuracy: $\pm 2.0\%$
- Input voltage: 10 V max.
- Output current: 50 mA capable
(Product with 3.0 V output, when $V_{IN} = 5$ V)^{*1}
75 mA capable
(Product with 5.0 V output, when $V_{IN} = 7$ V)^{*1}
- Dropout voltage: 160 mV typ.
($V_{OUT} = 5.0$ V, $I_{OUT} = 10$ mA)
- Low ESR capacitor: A ceramic capacitor of 0.1 μ F or higher.
- Short-circuit protection: Only for A series
- Excellent line regulation: Stable even with low load (1 μ A)
- Super-small package:
SNT-4A (A series)
SC-82AB (A series)
SOT-23-5 (B series)
TO-92 (B series)
SOT-89-3 (B series)

^{*1}. Attention should be paid to the power dissipation of the package when the load is large.

■ APPLICATIONS

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances

EXTERNAL TRANSISTOR TYPE VOLTAGE REGULATOR**S-816 series**

The S-816 series is an external transistor type positive voltage regulator with overcurrent protection and shutdown function, and has been developed using CMOS technology. Using an external PNP transistor, the S-816 series can configure a low dropout regulator with an output current in the range of several hundred mA to 1A.

An improved phase compensation circuit enables an excellent transient response with low current consumption, making the S-816 suitable for circuits with large input and/or load variations.

The SOT-23-5 small package combined with the low current consumption make the S-816 series ideal for battery-powered portable equipment. An input voltage of up to 16 V also enables direct input from an AC adapter.

■ PIN CONFIGURATIONS

Pin No.	Symbol	Description
1	EXT	Output pin for base-current control
2	VSS	GND pin
3	ON/OFF	Power-off pin
4	VIN	IC power supply pin
5	VOUT	Output voltage monitoring pin

■ FEATURES

- Low current consumption
30 µA typ., 40 µA max. (during operation)
1 µA max. (during power-off)
- Input voltage: 16 V max.
- Output voltage accuracy: ±2.0%
- Output voltage range: 2.5 V to 6.0 V
(Selectable in 0.1 V steps)
- Shutdown function
- Built-in current source (10 µA) eliminates the need for resistance between the base-emitters.
- Overcurrent (base current) protection

■ APPLICATIONS

- On-board power supply of battery devices for cellular phones, electronic organizers, and PDAs
- Constant voltage power supply for portable communication equipment, cameras, and video equipment
- Power supply for CPUs
- Switching regulator's next-stage regulator
- Main regulator for multi power supply system

LOW DROPOUT VOLTAGE REGULATOR

S-814 series

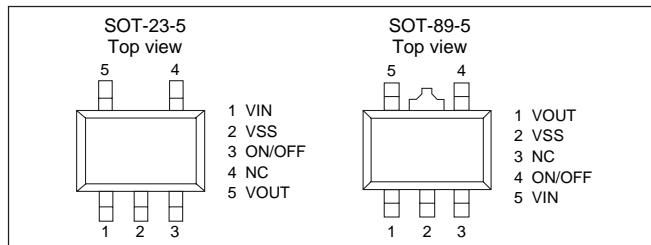

The S-814 series is a positive voltage regulator that features low dropout voltage, high output voltage accuracy and low current consumption, and has been developed using CMOS technology.

A built-in low on-resistance transistor enables a low dropout voltage and large output current, and the shutdown function can help extend battery life.

A greater variety of output capacitors can be used in the S-814 series compared with existing CMOS voltage regulators, including a small ceramic capacitor.

The small SOT-23-5 package is recommended for configuring portable devices and the SOT-89-5 for large output current applications.

Remark Please contact our sales office if you desire a product with an inverted ON/OFF pin logic.

FEATURES

- Low current consumption
30 µA typ., 40 µA max. (During operation)
100 nA typ., 500 nA max. (During power-off)
 - Output voltage: 2.0 V to 6.0 V (Selectable in 0.1 V steps)
 - Output voltage accuracy: ±2.0%
 - Input voltage: 10 V max.
 - Output current:
110 mA capable (product with 3.0 V output, when V_{IN} = 4 V)^{*1}
180 mA capable (product with 5.0 V output, when V_{IN} = 6 V)^{*1}
 - Low dropout voltage:
170 mV typ. (product with 5.0 V output, when I_{OUT} = 60 mA)
 - Built-in shutdown circuit
 - Built-in short-circuit protection circuit
 - Low ESR capacitor: A ceramic capacitor of 0.47 µF or more can be used as the output capacitor
 - Small package: SOT-23-5, SOT-89-5
- ^{*1}1. Attention should be paid to the power dissipation of the package when the load is large.

APPLICATIONS

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances

FEATURES

- Low current consumption
30 µA typ., 40 µA max. (during operation)
100 nA typ., 500 nA max. (during power-off)
 - Output voltage: 2.0 V to 6.0 V (selectable in 0.1 V steps)
 - Output voltage accuracy: ±2.0%
 - Input voltage: 10 V max.
 - Output current
200 mA capable (product with 3.0 V output, when V_{IN} = 4 V)*
300 mA capable (product with 5.0 V output, when V_{IN} = 6 V)*
 - Low dropout voltage
170 mV typ. (product with 5.0 V output, when I_{OUT} = 60 mA)
 - Built-in shutdown circuit
 - Low ESR capacitor: A ceramic capacitor of 2 µF or more can be used as the output capacitor
 - Small package: SOT-23-5, SOT-89-5
- *1. Attention should be paid to the power dissipation of the package when the load is large.

APPLICATIONS

- Constant voltage power supply for battery-powered devices
- Constant voltage power supply for communication devices
- Constant voltage power supply for household electrical appliances

HIGH RIPPLE REJECTION LOW DROPOUT CMOS VOLTAGE REGULATOR WITH RESET FUNCTION

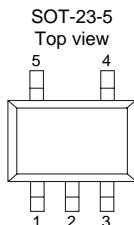

S-1701 series

The S-1701 series, developed based on CMOS technology, is a voltage regulator with a reset function and integrates a high-accuracy voltage detector with on-chip delay circuit and a positive voltage regulator with a low dropout voltage and high output voltage on one chip.

The S-1701 series is available in many types according to the selection of the voltage detector block of the voltage detector, including a SENSE pin input product. A built-in low on-resistance transistor provides a low dropout voltage and large output current.

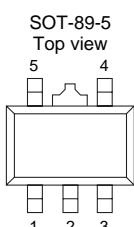

Small ceramic capacitors are available and an external capacitor for delay is needless. Small SOT-23-5 and SOT-89-5 packages realize high-density mounting.

PIN CONFIGURATIONS

Pin No.	Symbol	Description
1	VIN	Input voltage pin
2	VSS	GND pin
3	ON/OFF	Shutdown pin (A, B, C, D, E, F, G, H, J, K, L, M types)
3	SENSE	Detector SENSE pin (N, P, Q, R, S, T types)
3	NC ¹	No connection (U, V, W, X, Y, Z types)
4	V _{DOUT}	Detector output voltage pin
5	V _{OUT}	Regulator output voltage pin

¹1. The NC pin is electrically open.
The NC pin can be connected to VIN and VSS.

Pin No.	Symbol	Description
1	VIN	Input voltage pin
2	VSS	GND pin
3	V _{OUT}	Regulator output voltage pin
4	V _{DOUT}	Detector output voltage pin
5	ON/OFF	Shutdown pin (A, B, C, D, E, F, G, H, J, K, L, M types)
5	SENSE	Detector SENSE pin (N, P, Q, R, S, T types)
5	NC ¹	No connection (U, V, W, X, Y, Z types)

¹1. The NC pin is electrically open.
The NC pin can be connected to VIN and VSS.

FEATURES

Whole regulator

- Low current consumption
85 µA typ., 110 µA max. (during operation)

Regulator block

- Output voltage: 1.5 to 5.0 V (selectable in 0.1 V steps)
- High output voltage accuracy: ±1.0%
- Operating voltage range: 2.0 to 6.5 V
- Output current
400 mA capable (product with 3.0 V output, when $V_{IN} = 5\text{ V}$)¹
- Dropout voltage
140 mV typ. (product with 3.0 V output, when $I_{OUT} = 100\text{ mA}$)
- Ripple rejection rate: 70 dB typ. ($f = 1\text{ kHz}$, $V_{OUT} = 3\text{ V}$)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Input/output capacitor: Use of a ceramic capacitor of 1.0 µF or more is possible.

Detector block

- Detection voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
 - Detection voltage accuracy: ±1.0%
 - Operating voltage range: 0.8 to 6.5 V
 - Output mode: Nch open-drain active low output
 - No need of an external capacitor for delay
 - Three delay time settings: No delay (60 µs), 50 ms, 100 ms
- ¹1. Attention should be paid to the power dissipation of the package when the load large.

APPLICATIONS

- Power supply and reset circuit for battery-powered devices
- Power supply for personal communication devices
- Power supply for home appliances

■ FUNCTION LIST

Product Type	Regulator Block		Detector Block	
	ON/OFF Pin	ON/OFF Logic	SENSE Pin	Release Delay
S-1701 Series A Type	Provided	Active high	VIN connection (pin not provided)	No delay (60μs)
S-1701 Series B Type	Provided	Active high	VIN connection (pin not provided)	50ms
S-1701 Series C Type	Provided	Active high	VIN connection (pin not provided)	100ms
S-1701 Series D Type	Provided	Active high	VOUT connection (pin not provided)	No delay (60μs)
S-1701 Series E Type	Provided	Active high	VOUT connection (pin not provided)	50ms
S-1701 Series F Type	Provided	Active high	VOUT connection (pin not provided)	100ms
S-1701 Series G Type	Provided	Active low	VIN connection (pin not provided)	No delay (60μs)
S-1701 Series H Type	Provided	Active low	VIN connection (pin not provided)	50ms
S-1701 Series J Type	Provided	Active low	VIN connection (pin not provided)	100ms
S-1701 Series K Type	Provided	Active low	VOUT connection (pin not provided)	No delay (60μs)
S-1701 Series L Type	Provided	Active low	VOUT connection (pin not provided)	50ms
S-1701 Series M Type	Provided	Active low	VOUT connection (pin not provided)	100ms
S-1701 Series N Type	VIN connection (pin not provided)	None	Provided	No delay (60μs)
S-1701 Series P Type	VIN connection (pin not provided)	None	Provided	50ms
S-1701 Series Q Type	VIN connection (pin not provided)	None	Provided	100ms
S-1701 Series R Type	VOUT connection (pin not provided)	None	Provided	No delay (60μs)
S-1701 Series S Type	VOUT connection (pin not provided)	None	Provided	50ms
S-1701 Series T Type	VOUT connection (pin not provided)	None	Provided	100ms
S-1701 Series U Type	VIN connection (pin not provided)	None	VOUT connection (pin not provided)	No delay (60μs)
S-1701 Series V Type	VIN connection (pin not provided)	None	VOUT connection (pin not provided)	50ms
S-1701 Series W Type	VIN connection (pin not provided)	None	VOUT connection (pin not provided)	100ms
S-1701 Series X Type	VIN connection (pin not provided)	None	VIN connection (pin not provided)	No delay (60μs)
S-1701 Series Y Type	VIN connection (pin not provided)	None	VIN connection (pin not provided)	50ms
S-1701 Series Z Type	VIN connection (pin not provided)	None	VIN connection (pin not provided)	100ms

Remark For more details, refer to Data Sheet.

SUPER-SMALL PACKAGE 2-CIRCUIT HIGH RIPPLE REJECTION LOW DROPOUT CMOS VOLTAGE REGULATOR

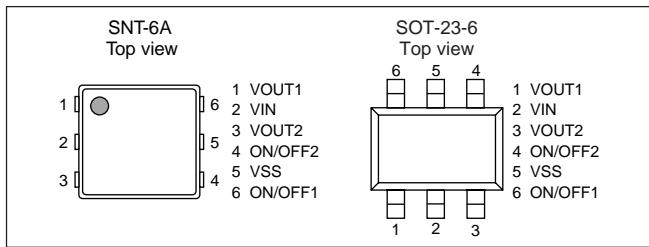

► NEW S-1711 series

The S-1711 series is a 2-channel positive voltage regulator with a low dropout voltage, high output voltage accuracy, and low current consumption (150 mA output current) developed based on CMOS technology.

A 1.0 μ F small ceramic capacitor can be used, and a 2-circuit voltage regulator with $\pm 1.0\%$ high-accuracy output voltage is incorporated in an SOT-23-6 or super-small SNT-6A package. A built-in output current protector prevents the load current from exceeding the current capacitance of the output transistor.

Compared with the conventional 150 mA output current 2-channel CMOS voltage regulators, high-density mounting is realized by using the super-small SNT-6A package and a small ceramic capacitor. Also, the low current consumption makes the S-1711 series ideal for mobile devices.

■ PIN CONFIGURATIONS

■ FUNCTION LIST

Product Type	ON/OFF Logic	Discharge Shunt Function	Pull-up/pull-down Resistance
S-1711 Series A Type	Active high	Available	Built-in pull-down resistance
S-1711 Series B Type	Active high	Available	None
S-1711 Series C Type	Active high	None	Built-in pull-down resistance
S-1711 Series D Type	Active high	None	None
S-1711 Series E Type	Active low	Available	Built-in pull-up resistance
S-1711 Series F Type	Active low	Available	None
S-1711 Series G Type	Active low	None	Built-in pull-up resistance
S-1711 Series H Type	Active low	None	None

Remark For more details, refer to Data Sheet.

■ FEATURES

- Low current consumption (Per circuit)
70 μ A typ., 90 μ A max. (during operation)
0.1 μ A typ., 1 μ A max. (during power-off)
- Output voltage: 1.5 to 5.5 V (selectable in 0.1 V steps)
- High output voltage accuracy: $\pm 1.0\%$
- Output current
150 mA capable (product with 3.0 V output, when $V_{IN} = 4 V$)^{*1}
- Dropout voltage
200 mV typ. (product with 3.0 V output, when $I_{OUT} = 150$ mA)
- Ripple rejection rate: 70 dB typ. ($f = 1$ kHz, $V_{OUT} = 3$ V)
- Built-in power-off circuit: Selection of positive/negative logic is possible.
- Built-in overcurrent protection circuit
- Use of a low ESR capacitor is possible.
- Input/output capacitor: Use of a ceramic capacitor of 1.0 μ F or more is possible.

***1.** Attention should be paid to the power dissipation of the package when the load is large.

■ APPLICATIONS

- Power supply for battery-powered devices
- Power supply for personal communication devices
- Power supply for home electric/electronic appliances
- Power supply for cellular phones

STEP-UP, SUPER-SMALL PACKAGE, 600 kHz, PWM CONTROL OR PWM/PFM SWITCHABLE SWITCHING REGULATOR CONTROLLER

S-8355/56/57/58 series

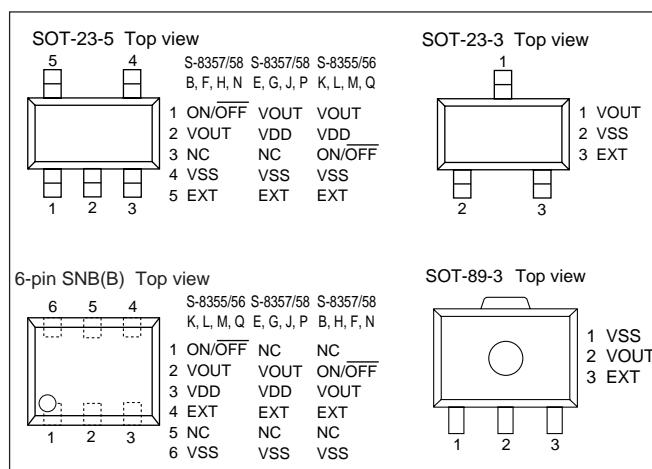

The S-8355/56/57/58 series is a CMOS step-up switching regulator which consists of a reference voltage source, an oscillation circuit, an error amplifier, a phase compensation circuit, a PWM controller (S-8355/57) and a PWM/PFM switching controller (S-8356/58).

A bipolar (NPN) transistor or an enhancement (N-ch) MOS FET transistor can be used as external transistor.

The S-8355/57 series realizes low ripple, high efficiency, and excellent transient characteristics due to its PWM controller, which can vary the duty ratio linearly from 0% to 83% (from 0 to 78% for 250 kHz, 300 kHz, and 600 kHz models), optimally-designed error amplifier, and phase compensation circuits.

The S-8356/58 series features a PWM/PFM switching controller that can switch the operation to a PFM controller under light loads to prevent a decrease in efficiency.

PIN CONFIGURATIONS

FUNCTION LIST

Product name	Control system	Switching frequency (kHz)	Shutdown function	Vdd/Vout separation type	Package	Applications
S-8355KxxMC	PWM	100	Yes	Yes	SOT-23-5	Application requiring a variable output voltage and a shutdown function

S-8358ExxMC	PWM/PFM switched	100	-	Yes	SOT-23-5	Application in which the output voltage is adjusted by external resistor
S-8358FxxMC/BD	PWM/PFM switched	300	Yes	-	SOT-23-5/6-pin SNB(B)	Application requiring a shutdown function and a thin coil
S-8358GxxMC/BD	PWM/PFM switched	300	-	Yes	SOT-23-5/6-pin SNB(B)	Application requiring a variable output voltage and a thin coil
S-8358HxxMC/BD	PWM/PFM switched	250	Yes	-	SOT-23-5/6-pin SNB(B)	Application requiring a shutdown function and a thin coil
S-8358JxxMC/BD	PWM/PFM switched	250	-	Yes	SOT-23-5/6-pin SNB(B)	Application in which the output voltage is adjusted by external resistor and requiring a thin coil
S-8358NxxMC/BD	PWM/PFM switched	600	Yes	-	SOT-23-5/6-pin SNB(B)	Application requiring a shutdown function and a thin coil
S-8358PxxMC/BD	PWM/PFM switched	600	-	Yes	SOT-23-5/6-pin SNB(B)	Application in which the output voltage is adjusted by external resistor and requiring a thin coil

FEATURES

- Low voltage operation:
Start-up is guaranteed from 0.9 V ($I_{OUT} = 1$ mA)
- Low current consumption:
25.9 μ A typ. (100 kHz product, 3.3 V, during operation)
0.5 μ A max. (during power-off)
- Duty ratio:
Built-in PWM/PFM switching control circuit (S-8356/58)
15 to 83% (100 kHz models),
15 to 78% (250 kHz, 300 kHz, and 600 kHz models)
- External parts: Coil, diode, capacitor, and transistor
- Output voltage:
1.5 to 6.5 V (for Vdd/Vout separate types) or
2.0 to 6.5 V (for other than Vdd/Vout separate types)
(Selectable in 0.1 V steps).
- Output voltage accuracy: $\pm 2.4\%$
- Oscillation frequency: 100, 250, 300, 600 kHz
- Soft start function: 6 ms typ. (100 kHz models)
- Shutdown function
- Package: 6-pin SNB(B), SOT-23-5, SOT-23-3, and SOT-89-3

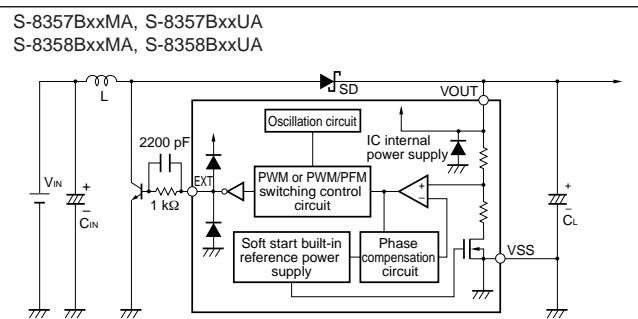

APPLICATIONS

- Power supplies for portable devices, such as digital cameras, electronic organizers, and PDAs,
- Power supplies for audio equipment, such as portable CD/MD players
- Constant voltage power supply of cameras, video equipment, and communication devices
- Power supply for microcomputers

POWER SUPPLY ICs Switching Regulators (DC-DC Converters)

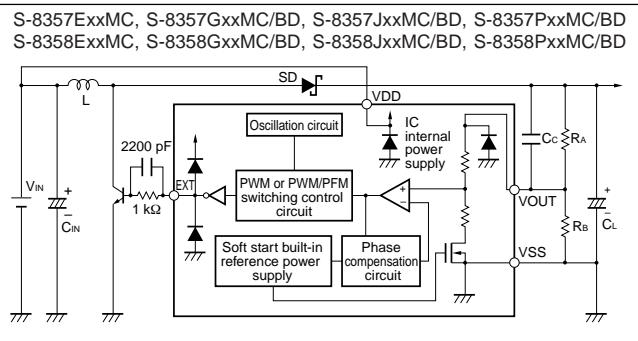

BLOCK DIAGRAM AND CIRCUIT CONNECTION EXAMPLE

1. Without shutdown function

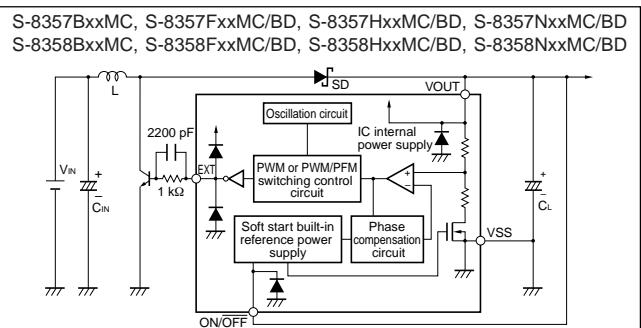

Remark The positive power supply pin of the circuits in the IC is VOUT.

3. VDD separate type (variable output voltage type)

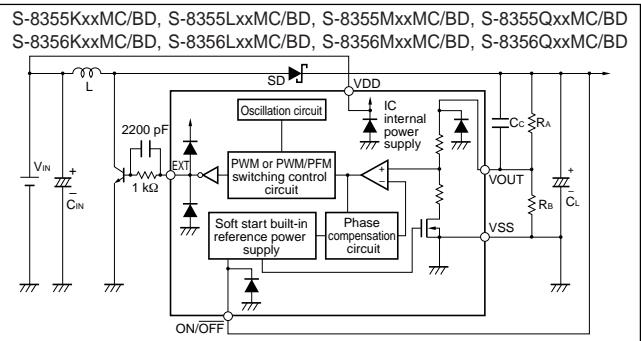

Remark The positive power supply pin of the circuits in the IC is VDD.

2. With shutdown function

Remark The positive power supply pin of the circuits in the IC is VOUT.

4. VDD/VOUT separate type (with shutdown function)

Remark The positive power supply pin of the circuits in the IC is VDD.

STEP-UP, PWM CONTROL OR PWM/PFM SWITCHABLE BUILT-IN TRANSISTOR SWITCHING REGULATOR

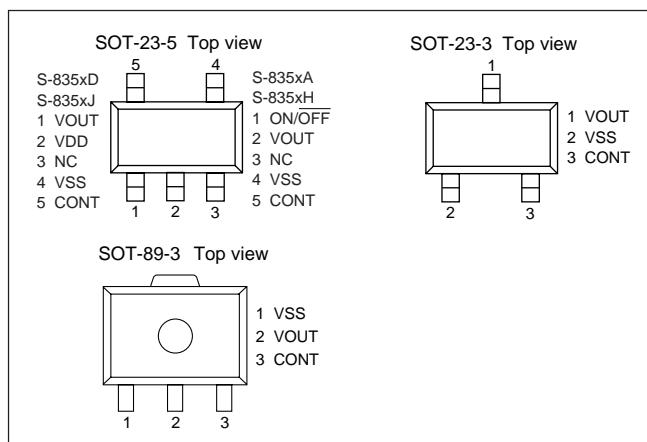

S-8353/8354 series

The S-8353/8354 series is a CMOS step-up switching regulator which consists of a reference voltage source, an oscillation circuit, a power MOS FET, an error amplifier, a phase compensation circuit, a PWM controller (S-8353 series) and a PWM/PFM switching controller (S-8354 series).

The step-up switching regulator can be configured simply by attaching a coil, capacitor, and diode externally. In addition to the above features, the small package and low power consumption of this series make it ideal for portable device applications requiring high efficiency. The S-8353 series realizes low ripple, high efficiency, and excellent transient characteristics due to its PWM controller, which can vary the duty ratio linearly from 0% to 83% (from 0% to 78% for 250 kHz models), optimally-designed error amplifier, and phase compensation circuits.

The S-8354 series features a PWM/PFM switching controller that can switch the operation to a PFM controller under a light load to prevent a decrease in efficiency.

PIN CONFIGURATIONS

FUNCTION LIST

Product name	Control system	Switching frequency (kHz)	Shutdown function	Vdd/Vout separation type	Package	Applications
S-8353AxxMC	PWM	50	Yes	-	SOT-23-5	Application requiring a shutdown function
S-8353AxxMA/UA	PWM	50	-	-	SOT-23-3/SOT-89-3	Application not requiring a shutdown function
S-8353CxxMA/UA	PWM	30	-	-	SOT-23-3/SOT-89-3	For pagers
S-8353DxxMC	PWM	50	-	Yes	SOT-23-5	Application in which the output voltage is adjusted by external resistor
S-8353HxxMC	PWM	250	Yes	-	SOT-23-5	Application requiring a shutdown function and a thin coil
S-8353HxxMA/UA	PWM	250	-	-	SOT-23-3/SOT-89-3	Application not requiring a shutdown function but requiring a thin coil.
S-8353JxxMC	PWM	250	-	Yes	SOT-23-5	Application in which the output voltage is adjusted by external resistor and requiring a thin coil
S-8354AxxMC	PWM/PFM switched	50	Yes	-	SOT-23-5	Application requiring a shutdown function

S-8354HxxMC	PWM/PFM switched	250	Yes	-	SOT-23-5	Application requiring a shutdown function and a thin coil
S-8354HxxMA/UA	PWM/PFM switched	250	-	-	SOT-23-3/SOT-89-3	Application not requiring a shutdown function but requiring a thin coil.
S-8354JxxMC	PWM/PFM switched	250	-	Yes	SOT-23-5	Application in which the output voltage is adjusted by external resistor and requiring a thin coil

FEATURES

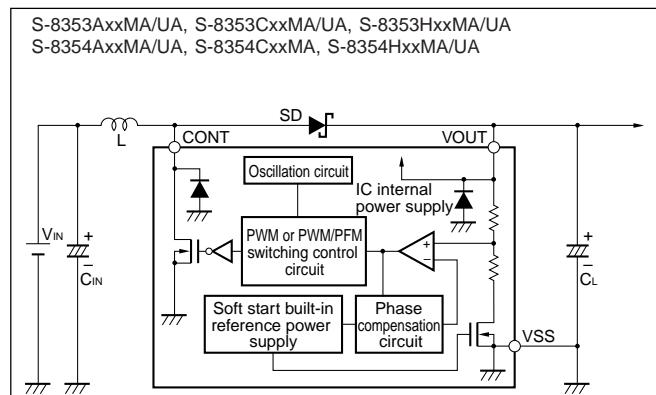

- Low voltage operation:
Start-up is guaranteed from 0.9 V ($I_{OUT} = 1 \text{ mA}$)
- Low current consumption:
18.7 μA typ. (50 kHz product, 3.3 V, during operation)
0.5 μA max. (during power-off)
- Duty ratio:
Built-in PWM/PFM switching control circuit (S-8354 series)
15 to 83% (30 kHz and 50 kHz models),
15 to 78% (250 kHz models)
- External parts: Coil, capacitor, and diode
- Output voltage:
1.5 to 6.5 V (for Vdd/Vout separate types) or
2.0 to 6.5 V (for other than Vdd/Vout separate types)
(Selectable in 0.1 V steps)
- Output voltage accuracy: $\pm 2.4\%$
- Oscillation frequency: 30, 50, and 250 kHz
- Soft start function: 6 ms typ. (50 kHz models)
- Package: SOT-23-5, SOT-23-3, and SOT-89-3

APPLICATIONS

- Power supplies for portable equipment such as digital cameras, electronic organizers, and PDAs
- Power supplies for audio equipment such as portable CD/MD players
- Constant voltage power supplies for cameras, video equipment, and communications equipment
- Power supplies for microcomputers

STEP-UP, 600 kHz, PWM CONTROL OR PWM/PFM SWITCHABLE BUILT-IN TRANSISTOR SWITCHING REGULATOR (MULTICHP PACKAGE)

► NEW S-83M355/83M356 series

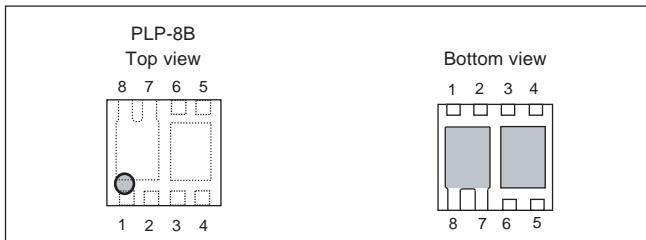

The S-83M355/83M356 series is a CMOS step-up switching regulator with power MOS FET (multichip package) which mainly consists of a reference voltage source, an oscillation circuit, an error amplifier, a phase compensation circuit, a PWM control circuit (S-83M355 series) and a PWM/PFM switching control circuit (S-83M356 series). With a built-in low on-state resistance power MOS FET, this product can adapt to applications requiring high efficiency and a high output current with few external parts.

The S-83M355 series employs a PWM control circuit whose duty ratio can be varied linearly, is ideal for applications requiring a low ripple voltage.

The S-83M356 series features a PWM/PFM switching control circuit that can prevent a decline in the efficiency during a light load.

S-83M335/83M356 series is ideal for applications requiring high efficiency and a high output current due to its built-in 20 V withstand voltage power MOS FET.

PIN CONFIGURATION

FEATURES

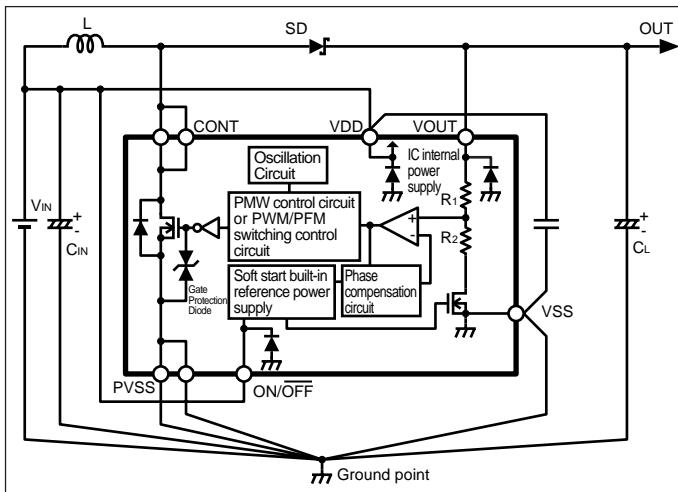

- Built-in power MOS FET: 75 mΩ (typ.)
: 20 V withstand voltage
- Input voltage: 1.5 V to 6.5 V
- Output voltage: 2.0 V to 15 V
: can be changed by an external resistor
- Oscillation frequency: 600 kHz
- Efficiency: 85% (typ.)
- Soft start function
- Shutdown function

APPLICATIONS

- Power supplies for portable equipment such as digital cameras, electronic notebooks, and PDAs
- Power supplies for audio equipment such as portable CD/MD players

Pin No.	Symbol	Description
1, 2	PVSS	Power GND pin
3	VSS	GND pin

**STEP-UP, SUPER-SMALL PACKAGE, PFM CONTROL SWITCHING REGULATOR/
SWITCHING REGULATOR CONTROLLER**
S-8351/8352 series

The S-8351/8352 series is a CMOS PFM-control step-up switching regulator that consists of a reference voltage source, an oscillator, and a comparator. The PFM controller allows the duty ratio to be automatically switched according to the load (light load: 50%, high output current: 75%), enabling products with a low ripple over a wide range, high efficiency, and high output current (product types A, B, and D). Products with a fixed duty ratio of 75% are also available (product type C).

With the S-8351 series, a step-up switching regulator can be configured by using an external coil, capacitor, and diode. The built-in MOS FET is turned off by a protection circuit when the voltage at the CONT pin exceeds the limit to prevent it from being damaged. This feature, along with the mini package and low current consumption, makes the S-8351 series ideal for portable equipment.

The S-8352 series, which features an external transistor, is suitable for applications requiring high output current.

STEP-UP, 1.2 MHz HIGH-FREQUENCY, PWM CONTROL SWITCHING REGULATOR CONTROLLER

S-8337/8338 series

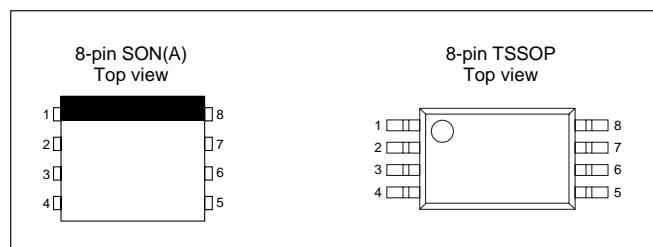

The S-8337/8338 series is a family of CMOS step-up switching regulators that include a reference voltage source, an oscillator, an error amplifier, a PWM controller, an under voltage lockout circuit (UVLO), and a timer-latch-type short-circuit protection circuit. The minimum operating voltage is a low 1.8 V, making this series ideal for LCD power supplies and mobile devices that operate on a low voltage.

The resistor connected to the ROSC pin allows an internal oscillation frequency of up to 1.133 MHz to be set.

In the S-8337, the resistor connected to the RDuty pin allows the PWM maximum duty to be controlled. In the S-8338, the maximum duty is fixed to 88%. Changing the values of the resistor and capacitor connected to the CC pin allows control of the phase compensation and gain value and enables the operating stability and transient response to be set appropriately for each application.

The reference voltage is a high-accuracy 1.0 V $\pm 1.5\%$, enabling the desired output voltage to be obtained via an external output voltage setting resistor. The capacitor connected to the CSP pin can be used to set the short-circuit protection delay time. If the status of the maximum duty continues due to short-circuiting, the capacitor is charged and the operation is stopped after a specified time. This status is cancelled when power is turned on again or the controller enters the power off status (S-8338). Either a ceramic or tantalum capacitor can be used as the output capacitor. The S-8337/8338 series are very user-friendly controller ICs due to the variety of possible settings and selections and the small package.

PIN CONFIGURATION

FEATURES

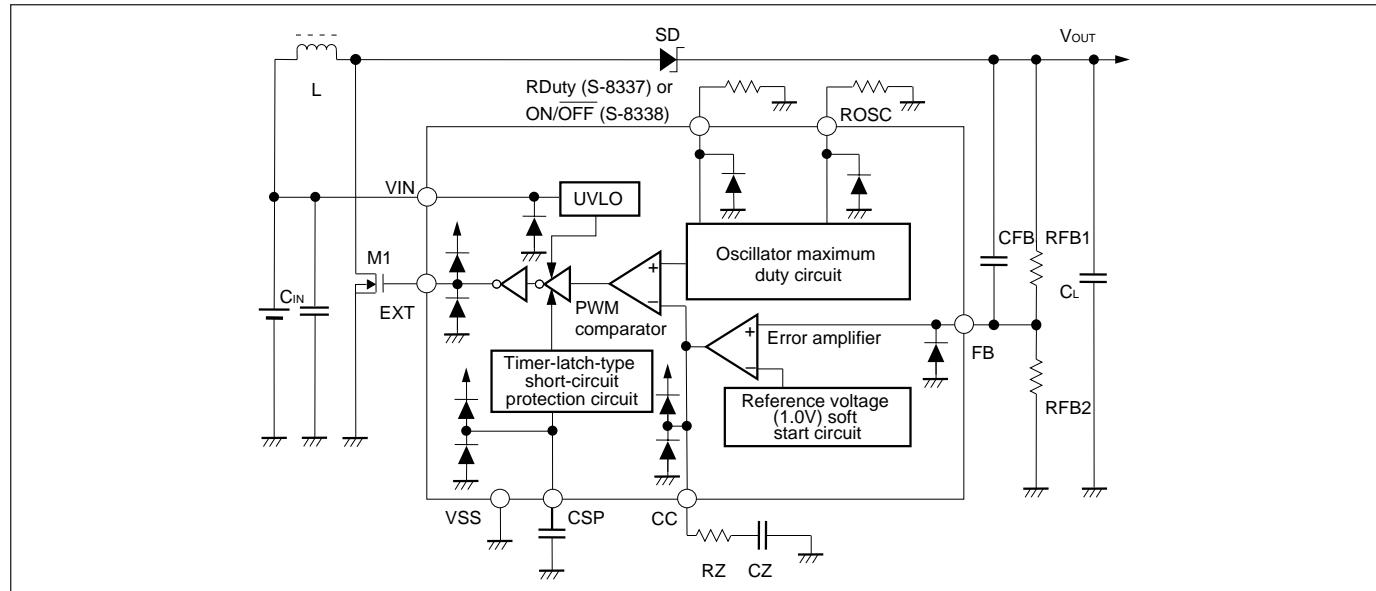

- Low voltage operation: 1.8 V to 6.0 V
- Oscillation frequency: Settable in range of 286 kHz to 1.133 MHz via external resistor
- Maximum duty: Settable in range of 47 to 88.5% via external resistor (S-8337 series)
Fixed to 88% typ. (S-8338 series)
- Reference voltage: 1.0 V $\pm 1.5\%$
- U.V.L.O. function:
Detection voltage selectable from 1.5 V to 2.3 V in 0.1 V steps
Hysteresis width selectable from 0.1 V to 0.3 V in 0.1 V steps
- Timer-latch-type short-circuit protection circuit:
Delay time settable via external capacitor
- Soft start function: Soft-start time adjustable in three steps: 10 ms, 15 ms, and 20 ms
- Phase compensation external setting: Adjustable by connecting resistor and capacitor to GND in series
- Power-off function: Current consumption during power-off 1.0 μ A max. (S-8338 series)
- Small package: 8-pin SON(A), 8-pin TSSOP

APPLICATIONS

- Power supply for LCD bias
- Power supply for portable devices

Pin No.	Symbol	Description
1	CC	Error amplifier output phase compensation pin
2	FB	Output voltage return pin
3	CSP	Short-circuit protection delay time setting pin
4	VIN	Power supply input pin
5	EXT	External transistor connector pin
6	VSS	GND pin
7	ROSC	Oscillation frequency setting resistor connection pin
8	RDuty	Maximum duty setting resistor connection pin (S-8337) ON/OFF Power-off pin (S-8338)

BLOCK DIAGRAM AND CIRCUIT CONNECTION EXAMPLE

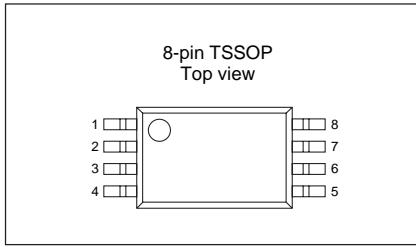

STEP-UP, 600 kHz, PWM CONTROL OR PWM/PFM SWITCHABLE SWITCHING REGULATOR CONTROLLER

S-8340/8341 series

The S-8340/8341 series is a family of PWM control (S-8340) and PWM/PFM switchover control (S-8341) CMOS step-up switching regulator controllers that consist of a reference voltage source, an oscillator, an error amplifier, a phase compensation circuit, a PWM controller, etc. A high oscillation frequency of 300 kHz or 600 kHz enables the realization of a high efficiency switching regulator capable of driving large output current using small external components. In addition, the output stage can be speed up due to the high speed switching of the low on-resistance N-ch power MOS. The S-8340 provides high efficiency, excellent transient characteristics and low ripple output from an optimally designed error amplifier, phase compensation circuit and PWM controller that varies the duty ratio linearly from 0% to 82%. The S-8341 achieves high efficiency over the entire load range due to the PWM/PFM switchover circuit, which enters PWM mode when the duty ratio is higher than 27% and PFM mode when lower.

The small 8-pin TSSOP package and high oscillation frequency make this series suitable for use as a power supply for portable devices.

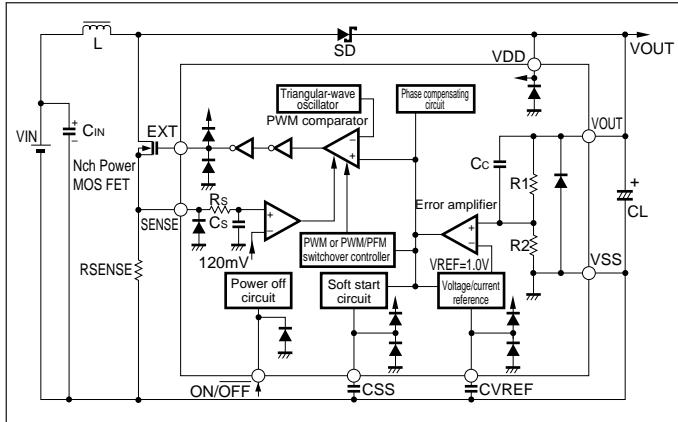

PIN CONFIGURATION

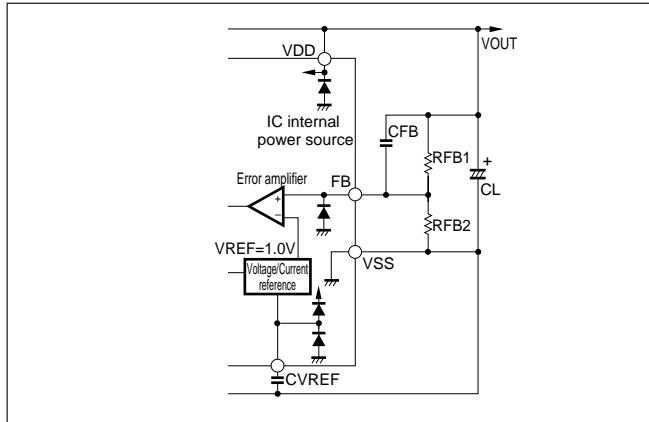

Pin No.	Symbol	Description
1	VSS	GND pin
2	CVREF	Bypass capacitor connection pin for reference voltage source
3	CSS	Soft start capacitor connection pin
4	ON/OFF	Power off pin "H": Normal operation (step-up operations) "L": Step-up stopped (all circuits stopped)
5	VDD	IC power supply pin
6	VOUT (FB)	Output voltage pin (FB for externally set types)
7	EXT	External transistor connector pin
8	SENSE	Current limiting detection pin

**STEP-UP, FOR LCD BIAS SUPPLY,
1-CHANNEL, PWM CONTROL SWITCHING REGULATOR CONTROLLER**

► NEW S-8333 series

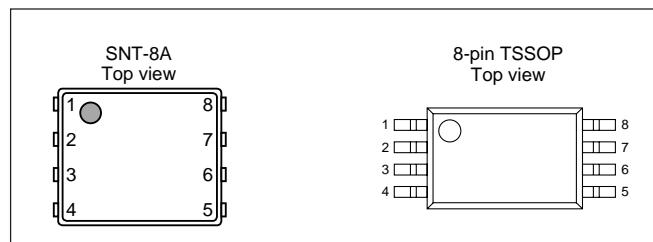

The S-8333 series is a family of CMOS step-up switching regulators that include a reference voltage source, an oscillator, an error amplifier, a PWM controller, an under voltage lockout circuit (UVLO), and a timer-latch-type short-circuit protection circuit. The minimum operating voltage is a low 1.8 V, making this series ideal for LCD power supplies and mobile devices that operate on a low voltage.

The resistor connected to the ROSC pin allows an internal oscillation frequency of up to 1.133 MHz to be set.

The resistor connected to the RDuty pin allows the PWM maximum duty to be controlled. The soft-start function at power application is accomplished by combining the reference voltage control and maximum duty control methods. Even if the voltage of the FB pin is retained lower than the reference voltage due to factor outside of the IC, the output voltage is raised by controlling the maximum duty. Changing the values of the resistor and capacitor connected to the CC pin allows control of the phase compensation and gain value and enables the operating stability and transient response to be set appropriately for each application.

The reference voltage is a high-accuracy $1.0\text{ V} \pm 1.5\%$, enabling the desired output voltage to be obtained via an external output voltage setting resistor. The capacitor connected to the CSP pin can be used to set the short-circuit protection delay time. If the status of the maximum duty continues due to short-circuiting, the capacitor is charged and the operation is stopped after a specified time. The short-circuit protection function is cancelled when the power supply is raised to the UVLO release voltage after it has been lowered to the UVLO detection voltage. Either a ceramic or tantalum capacitor can be used as the output capacitor. The S-8333 series are very user-friendly controller ICs due to the variety of possible settings and selections and the small package.

PIN CONFIGURATION

FEATURES

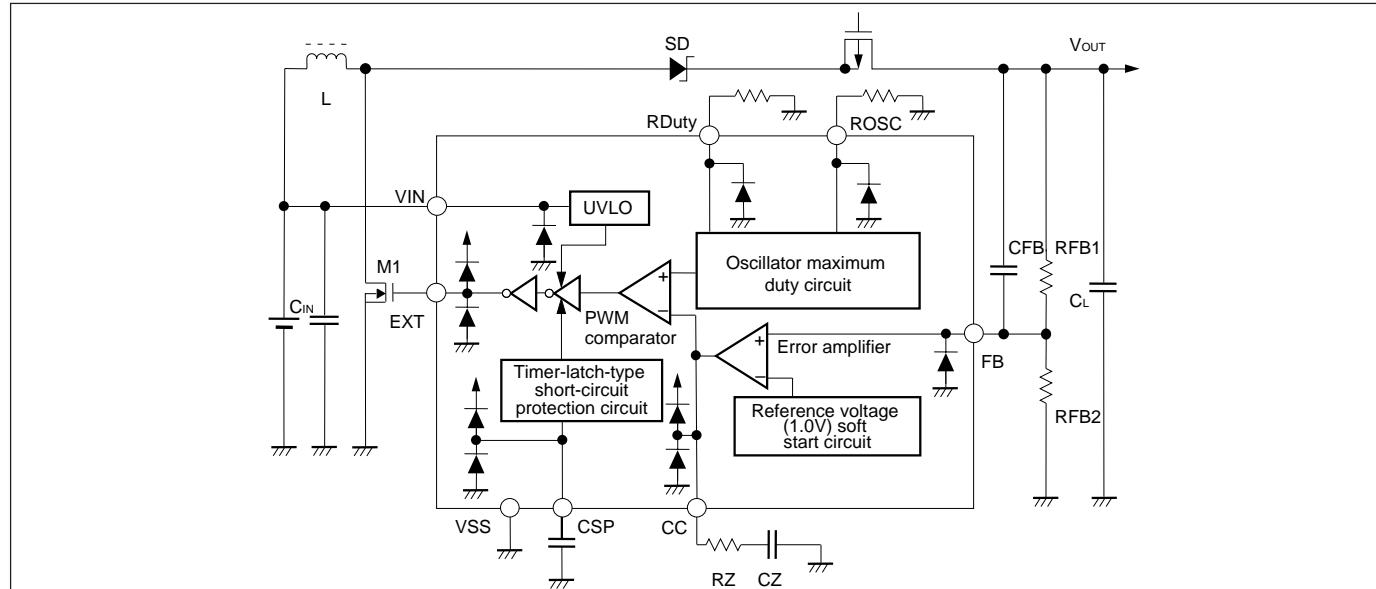

- Low voltage operation: 1.8 V to 6.0 V
- Oscillation frequency: Settable in range of 286 kHz to 1.133 MHz via external resistor
- Maximum duty: Settable in range of 47 to 88.5% via external resistor
- Reference voltage: $1.0\text{ V} \pm 1.5\%$
- U.V.L.O. function:
Detection voltage selectable from 1.5 V to 2.3 V in 0.1 V steps
Hysteresis width selectable from 0.1 V to 0.3 V in 0.1 V steps
- Timer-latch-type short-circuit protection circuit:
Delay time settable via external capacitor
- Soft start function: Soft-start time adjustable in three steps: 10 ms, 15 ms, and 20 ms
Both reference voltage control and maximum duty control methods are applied.
- Phase compensation external setting: Adjustable by connecting resistor and capacitor to GND in series
- Small package: SNT-8A, 8-pin TSSOP

APPLICATIONS

- Power supply for LCD bias
- Power supply for portable devices

Pin No.	Symbol	Description
1	CC	Error amplifier output phase compensation pin
2	FB	Output voltage return pin
3	CSP	Short-circuit protection delay time setting pin
4	VIN	Power supply input pin
5	EXT	External transistor connector pin
6	VSS	GND pin
7	ROSC	Oscillation frequency setting resistor connection pin
8	RDuty	Maximum duty setting resistor connection pin

BLOCK DIAGRAM AND CIRCUIT CONNECTION EXAMPLE

STEP-UP, FOR LCD BIAS SUPPLY, 3-CHANNEL SWITCHING REGULATOR

S-8335 series

The S-8335 series is an IC for the bias power supply of a Multi Line Addressing (MLA) drive LCD with a two-line simultaneous selection system. It can be used for a medium-sized LCD panel. The positive and negative power supplies required for the LCD common driver of 2MLA drive systems and each segment driver is supplied by two step-up types and one inversion type PFM control CMOS switching regulators. Since the current consumption is very small due to the CMOS structure, this series is ideal for the LCD power supply of portable devices requiring low power consumption. Moreover, it is possible to form a very low power consumption LCD module using an LCD common driver (HD66523R¹: product of Hitachi, Ltd.), a segment driver (HD66522²: product of Hitachi, Ltd.), and the S-8335 series.

*1. These drivers can support 1/240 and 1/200 duty.

APPLICATIONS

- Power supply of medium-sized LCD panel

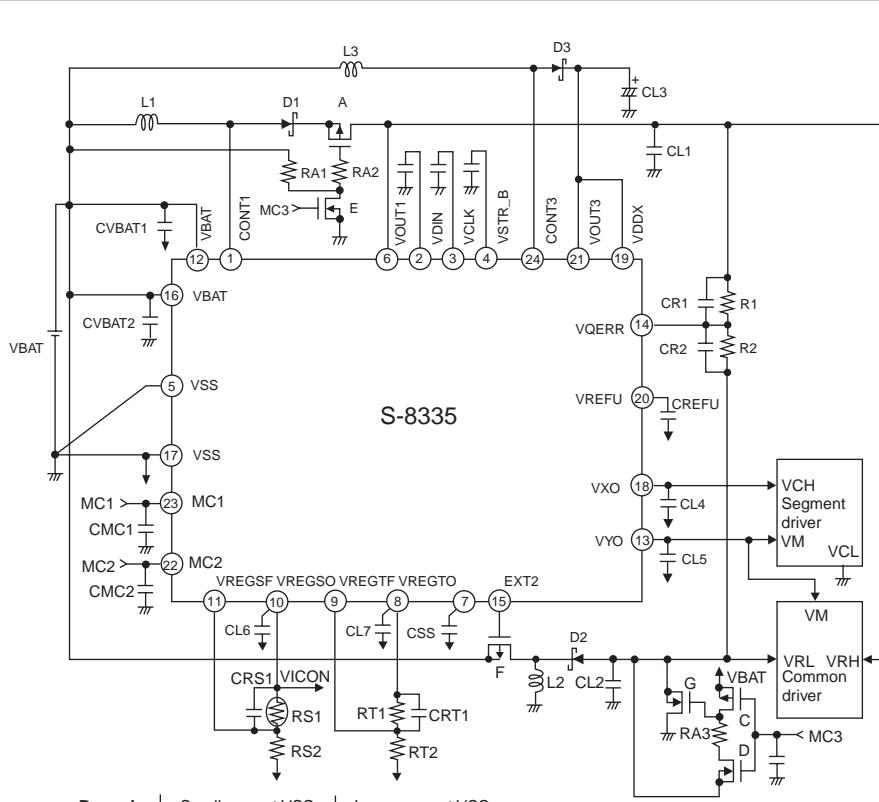

SELECTION GUIDE

Product name	Bias ratio	Common driver positive power supply VRH output voltage range [V]		Common driver negative power supply VRL output voltage range [V]	
		VRH_min	VRH_max	VRL_min	VRL_max
S-8335A240FT-TB-G	8.75	8.91	16.59	-6.87	-12.80
S-8335A200FT-TB-G	8.04	8.22	15.30	-6.18	-11.49
S-8335A160FT-TB-G	7.33	7.48	13.93	-5.44	-10.13
S-8335A120FT-TB-G	6.50	6.66	12.41	-4.61	-8.59

FEATURES

- Can be used in four kinds of LCD panels.
1/240 duty, 1/200 duty, 1/160 duty, 1/120 duty
- Input voltage range:
2.4 to 5.0 V (driving directly with one lithium battery is possible)
- Output voltage range
 - Common driver positive power supply (VRH) output voltage range (typ. value)
8.91 to 16.59 V (S-8335A240FT-TB-G)
8.22 to 15.30 V (S-8335A200FT-TB-G)
7.48 to 13.93 V (S-8335A160FT-TB-G)
6.66 to 12.41 V (S-8335A120FT-TB-G)
(Variable using built-in 6-bit electronic volume, also includes built-in power MOS FET)
 - Common driver negative power supply (VRL) output voltage range (typ. value)
-6.87 to -12.80 V (S-8335A240FT-TB-G)
-6.18 to -11.49 V (S-8335A200FT-TB-G)
-5.44 to -10.13 V (S-8335A160FT-TB-G)
-4.61 to -8.59 V (S-8335A120FT-TB-G)
- Segment driver positive power supply output voltage range 2.0 to 3.8 V
- Segment driver middle output voltage range 1.0 to 1.9 V
- Positive power supply (VICON) output voltage range for icons 1.0 to 2.2 V (a voltage can be set by external resistor)
- Low current consumption: 100 μ A typ. (Mode 1, VBAT = 3 V)
10 μ A typ. (Mode 2, VBAT = 3 V)
1 μ A max. (Mode 3, VBAT = 3 V)
- Triple operation mode function: Mode 1: Normal operation
Mode 2: Icon mode
Mode 3: Standby mode
- Shutdown function: Stepping up operation is stopped, and the VRH and VRL pins are shorted to VSS using an on-chip or external Nch transistor.
- Soft start function: Can be set by external capacitor (CSS).
- Oscillation frequency: 100 kHz \pm 20 kHz, duty = 50%
- Package: 24-pin TSSOP

EXAMPLE OF APPLICATION CIRCUIT

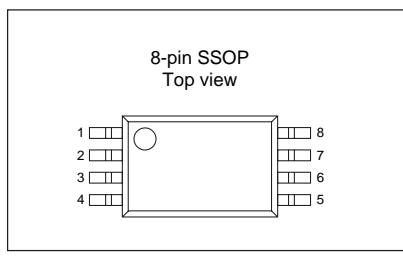

STEP-UP, FOR LCD BIAS SUPPLY, 1-CHANNEL SWITCHING REGULATOR

S-8330/8331 series

The S-8330/8331 series is a CMOS PWM-control step-up switching regulator that consists of a reference voltage source, an oscillation circuit, a power MOS FET (for the S-8330 series), and an error amplifier. The output voltage can be adjusted by electronic volume. A shutdown function is also available. The S-8330 series features low current consumption due to the CMOS structure, and a step-up switching regulator can be constructed simply by externally connecting a coil, capacitors and a diode. The compact 8-pin SSOP package and small number of external components make the S-8330 series ideal for LCD bias generators in portable equipment. For applications requiring a high output current, the external transistor controller type S-8331 series is also available.

PIN CONFIGURATION

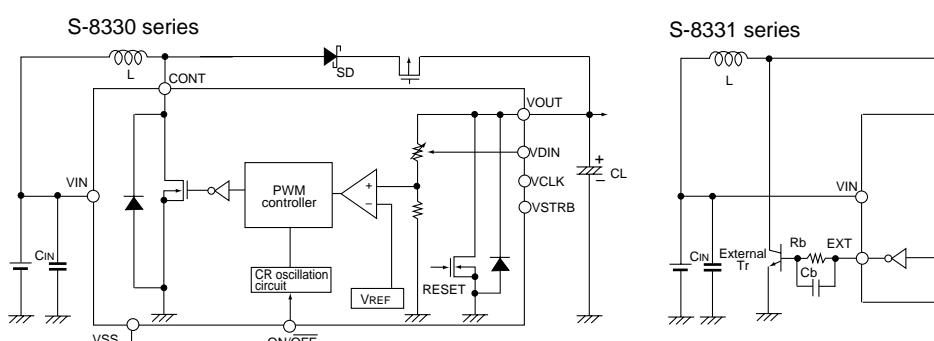

Pin No.	Symbol	Description
1	VDIN	Electric volume data input pin
2	VCLK	Electric volume clock input pin
3	VSTRB	Electric volume strobe signal input pin
4	VOUT	Output voltage monitor pin
5	VIN	Power supply pin
6	CONT	External inductor connection pin (S-8330 series: Open drain output)
	EXT	External transistor connection pin (S-8331 series: Push-pull (CMOS output))
7	ON / OFF	Shutdown pin "H": Normal operation (stepping up operation) "L": Stepping up stopped
8	VSS	GND pin

BLOCK DIAGRAM AND CIRCUIT CONNECTION EXAMPLE

STEP-DOWN, PWM CONTROL OR PWM/PFM SWITCHABLE SWITCHING REGULATOR CONTROLLER

S-8520/8521 series

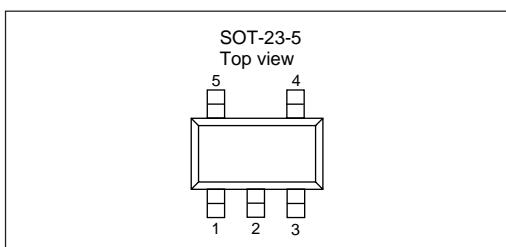

The S-8520/8521 series is a family of CMOS step-down switching regulator controllers with PWM-control (S-8520) and PWM/PFM switchover control (S-8521).

The S-8520 series provides low-ripple output, high-efficiency, and excellent transient characteristics due to a PWM controller capable of varying the duty ratio linearly from 0% up to 100%. The series also contains a soft-start circuit that prevents overshoot at startup.

The S-8521 series works with either PWM control or PFM control, and can switch from one to the other. It normally operates using PWM control with a duty ratio of 25% to 100%, and under a light load, it automatically switches to PFM control with a duty ratio of 25%. This series ensures high efficiency over a wide range of conditions, from standby mode to full operation.

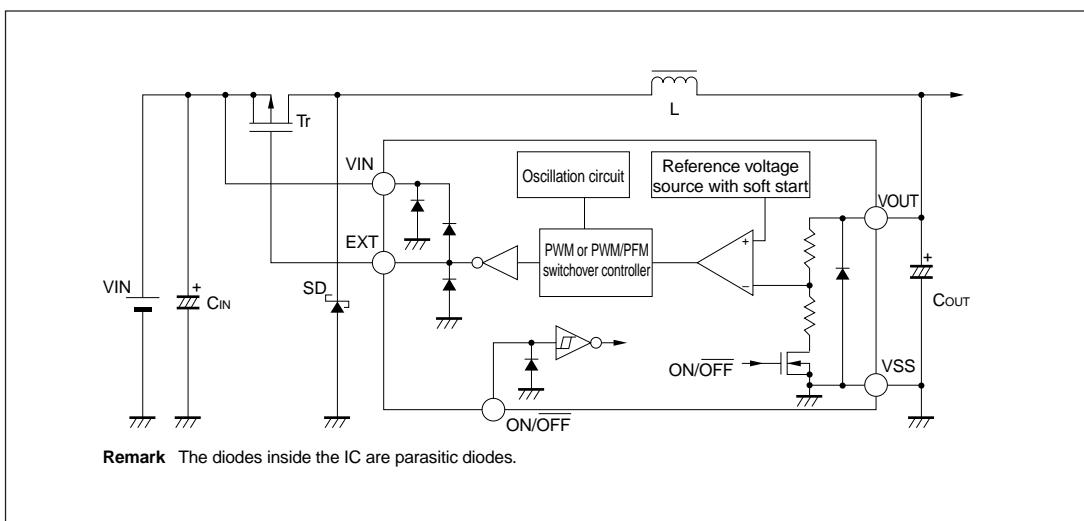

The combination of the SOT-23-5 small package and the low current consumption make the S-8520/8521 series an ideal power supply for portable devices.

PIN CONFIGURATION

Pin No.	Symbol	Description
1	ON/OFF	Power-off terminal "H": Normal operation (step-down operation) "L": Step-down operation stopped (All circuits deactivated)
2	VSS	GND pin
3	VOUT	Output voltage monitoring terminal
4	EXT	Connection terminal for external transistor
5	VIN	IC power supply terminal

BLOCK DIAGRAM AND CIRCUIT CONNECTION EXAMPLE

FEATURES

- Low current consumption:
60 μ A max. (A, B series, during operation)
21 μ A max. (C, D series, during operation)
100 μ A max. (E, F series, during operation)
0.5 μ A max. (during power-off)
- Input voltage: 2.5 V to 16 V (B, D, F series)
2.5 V to 10 V (A, C, E series)
- Output voltage: 1.5 V to 6.0 V (selectable in 0.1 V steps)
- Duty ratio: 0% to 100% PWM control (S-8520)
25% to 100% PWM/PFM switchover control (S-8521)
- External components: P-ch power MOS FET or PNP transistor, coil, diode and capacitors. (If a PNP transistor is used, a base resistor and a capacitor are required.)
- Oscillation frequency: 180 kHz typ. (A, B series),
60 kHz typ. (C, D series),
or 300 kHz typ. (E, F series)
- Soft-start function: 8 ms typ. (A, B series),
12 ms typ. (C, D series),
or 4.5 ms typ. (E, F series)
- Shutdown function
- Overload protection circuit: Overload detection time
4 ms typ. (A series),
14 ms typ. (C series),
2.6 ms typ. (E series)
- Package: SOT-23-5

APPLICATIONS

- On-board power supply of battery devices for portable telephones, electronic organizers, PDAs
- Power supply for audio devices such as portable CD players and headphone stereos
- Constant voltage power supply for cameras, video equipment and communications equipment
- Power supply for microcomputers
- Voltage conversion from 4-NiH or NiCd, or 2-Lithium ion batteries to 3.3 V/3 V
- Voltage conversion from AC adapter to 5 V/3 V

STEP-DOWN, 600 kHz, PWM CONTROL OR PWM/PFM SWITCHABLE SWITCHING REGULATOR CONTROLLER

S-8540/8541 series

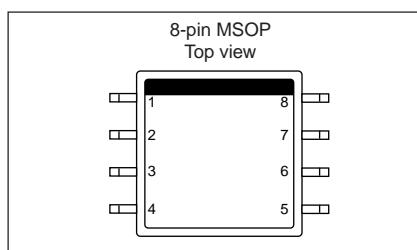

The S-8540/8541 series is a PWM control (S-8540) and PWM/PFM switchover control (S-8541) CMOS step-down switching regulator controller that includes a reference voltage source, an oscillation circuit, an error amplifier, a phase compensation circuit, a PWM controller, and a current limiter. Since the oscillation frequency is high (600 kHz and 300 kHz), a step-down switching regulator with an efficient and large output current can be constructed using only small external parts.

The S-8540 realizes low ripple and high efficiency due to a PWM controller that can change the duty ratio linearly from 0% to 100%, and an optimized error amplifier and phase compensation circuit.

The S-8541 operates in the PWM mode when the duty ratio is 29% and higher, and in the PFM mode when it is below 29% to realize high efficiency in the total load range.

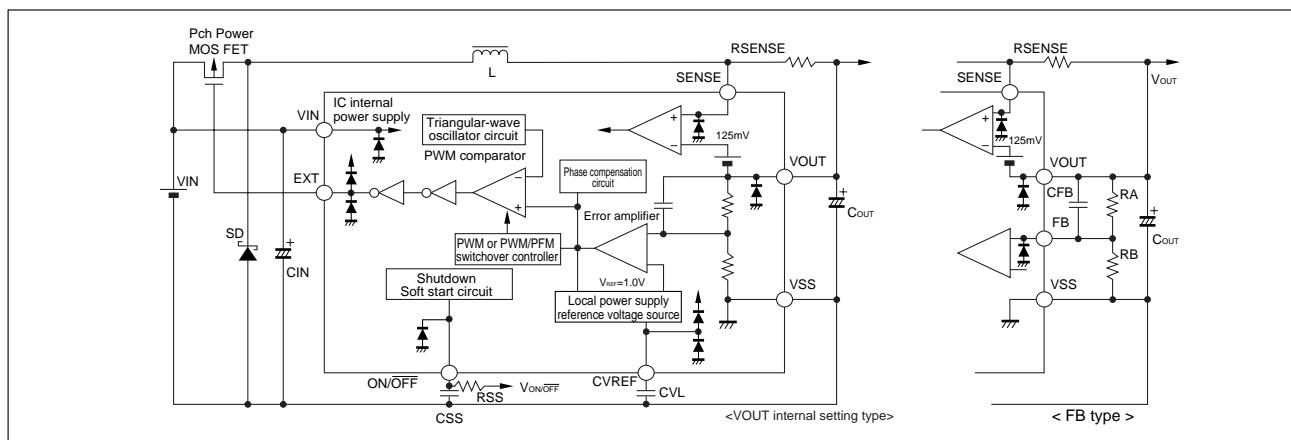

The combination of an 8-pin MSOP package and a high-oscillation frequency make the S-8540/8541 series controllers ideal as the main power supply of portable devices.

PIN CONFIGURATION

Pin No.	Symbol	Description
1	VSS	GND pin
2	EXT	External transistor connection pin
3	VIN	IC power supply pin
4	CVREF	Bypass capacitor connection pin for reference voltage source
5	ON/OFF	Shutdown connection pin, soft start capacitor connection pin Normal operation (step-down operation) All circuits stopped (step-down operation stopped)
6	NC (FB)	Output voltage fixed output type is NC. (Output voltage external setting type is FB)
7	VOUT	Output voltage pin
8	SENSE	Current limiting detection pin

Remark Please contact our sales office if a product with an output voltage other than the above is required.

STEP-DOWN, SYNCHRONOUS PWM CONTROL SWITCHING REGULATOR CONTROLLER

S-8533 series

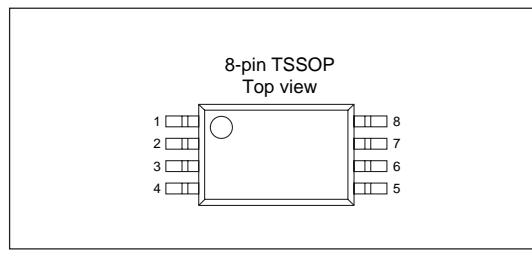

The S-8533 series is a synchronous PWM control CMOS step-down switching regulator controller that includes a reference voltage source, a synchronous rectification circuit, an oscillation circuit, an error amplifier, a phase compensation circuit, and a PWM controller.

An efficient step-down switching regulator can be realized simply by adding external Pch and Nch power MOS FETs, one coil, and three capacitors.

Since the oscillation frequency is a high 300 kHz, the S-8533 can be used to configure a high efficiency step-down switching regulator capable of driving high output current using small external components. Because of the synchronous rectification operation of the S-8533 series, a 3 to 10% increase in efficiency is obtained compared to conventional step-down switching regulators.

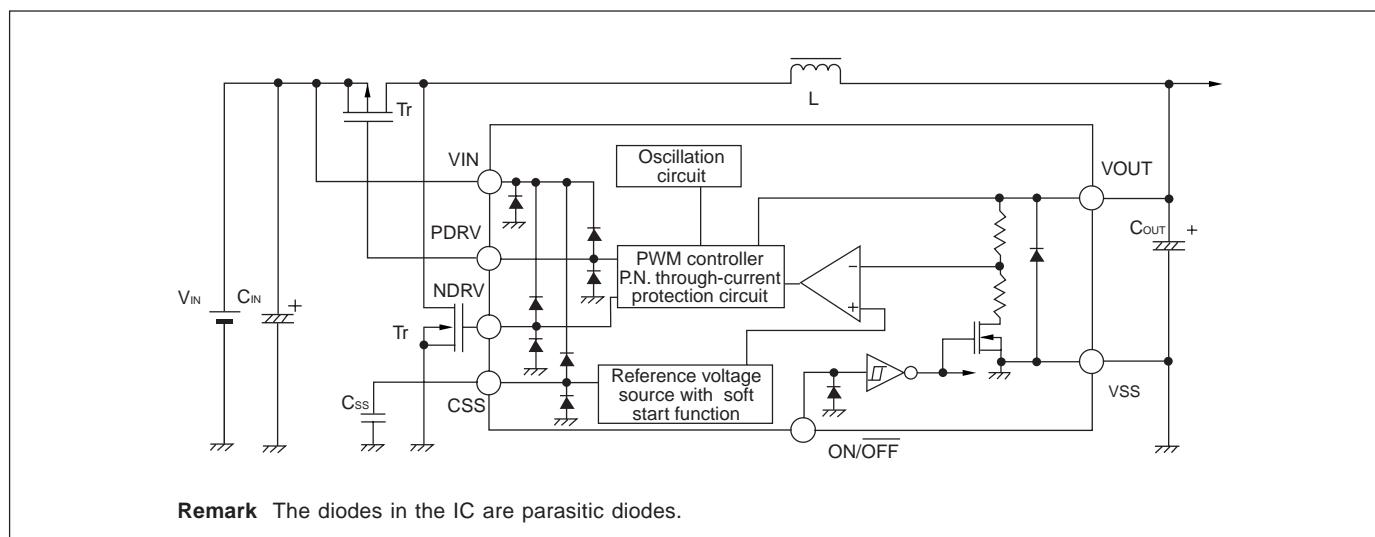

The 8-pin TSSOP and high oscillation frequency make the S-8533 ideal as the main power supply for portable devices.

PIN CONFIGURATIONS

Pin No.	Symbol	Description
1	NC	No connection
2	VOUT	Output voltage pin
3	ON / OFF	Shutdown pin "H": Usual operation (step-down operation) "L": Step-down stopped (all circuits stopped)
4	CSS	Soft start capacitor connection pin
5	VSS	GND pin
6	NDRV	External Nch connection pin
7	PDRV	External Pch connection pin
8	VIN	IC power supply pin

BLOCK DIAGRAM AND CIRCUIT CONNECTION EXAMPLE

FEATURES

- Synchronous rectification system realizing high efficiency (typ. 94%)
- Use at maximum duty = 100% and use of a battery up to maximum life is possible by using Pch and Nch MOS transistors on the MOS.
- Oscillation frequency: 300 kHz
- Input voltage: 2.7 to 16.0 V
- Output voltage: 1.25, 1.3 to 6.0 V (Selectable in 0.1 V steps)
- Output voltage accuracy: ±2.0%
- Soft start function: Can be set by external capacitor CSS.
- Shutdown function
- Small package: 8-pin TSSOP

APPLICATIONS

- Constant voltage power supply for hard disk and DVD drives
- Power supply for portable devices, such as digital cameras, PDAs, electronic organizers, and cellular phones
- Main or sub power supply of notebook computers and peripheral equipment
- Constant voltage power supply of cameras, video equipment, and communications devices

SELECTION GUIDE

Output voltage	8-pin TSSOP (3000/reel)
1.25V	S-8533A125FT-TB-G
1.5V	S-8533A15AFT-TB-G
1.8V	S-8533A18AFT-TB-G
2.5V	S-8533A25AFT-TB-G
2.7V	S-8533A27AFT-TB-G
3.3V	S-8533A33AFT-TB-G
5.0V	S-8533A50AFT-TB-G

Remark Please contact our sales office if a product with an output voltage other than the above is required.

STEP-UP OR DOWN, SINGLE-COIL, PWM CONTROL SWITCHING REGULATOR CONTROLLER

S-8460

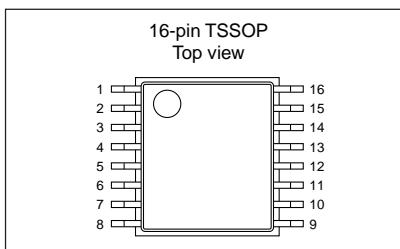

The S-8460 is a PWM control CMOS step-down switching regulator controller that includes a PWM step-up/down automatic switching circuit, a reference voltage circuit, an oscillation circuit, an error amplifier, a phase compensation circuit, and a PWM controller. The PWM step-up/down automatic switching control circuit realizes a highly efficient step-up/down switching regulator using one coil. Furthermore, efficient and large output current is enabled by externally attaching an N channel power MOS FET.

Moreover, the PWM controller, which can vary the duty ratio linearly from 0%, and the optimally designed error amplification circuit and phase compensation circuit realize low ripple and good transient response characteristics.

■ APPLICATIONS

- Power supply for portable devices, such as PDAs, electronic organizers, and cellular phones
- Main or the sub power supply of notebook computers and peripheral equipment
- Constant voltage power supply of cameras, video equipment, and communications.
- Available from 2 dry battery cells and 1 lithium cell to AC adapter

■ PIN CONFIGURATION

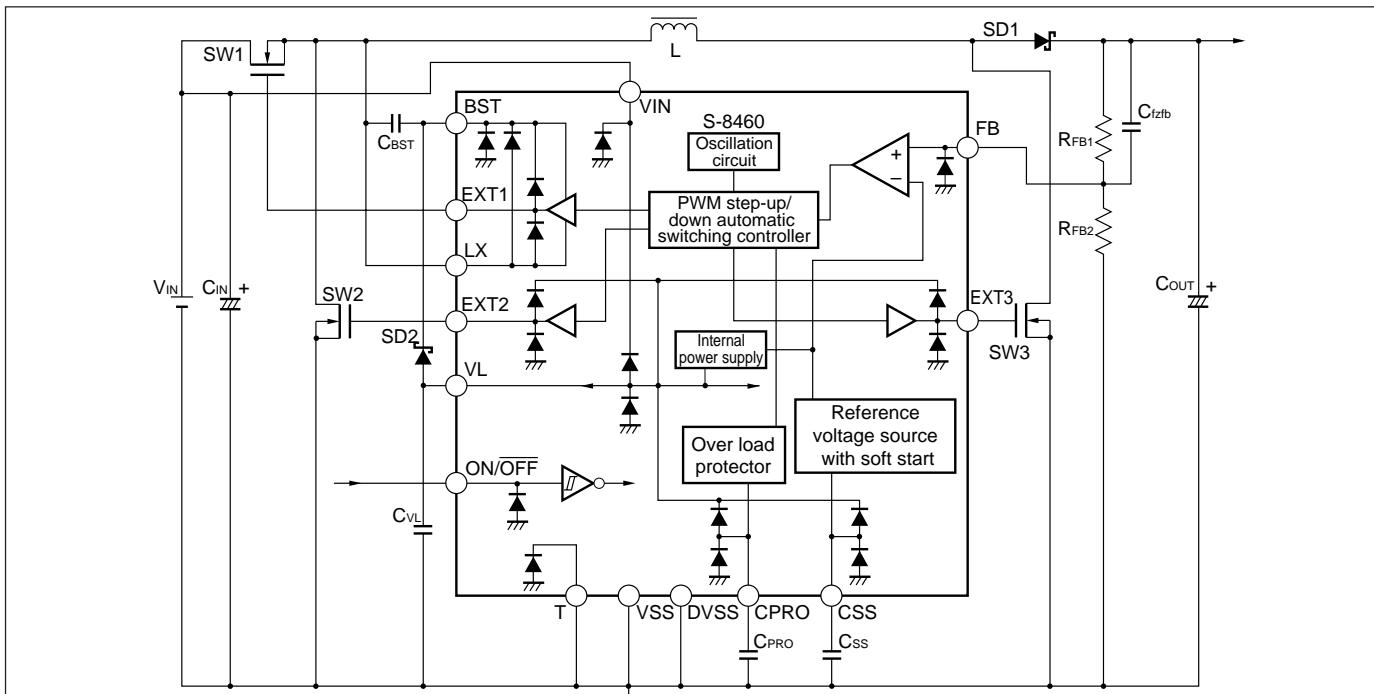

Pin No.	Symbol	Description
1	VIN	IC power supply pin
2	VL	Boost power supply pin
3	ON/OFF	Shutdown pin "H": Usual operation (step-up/down). "L": All circuits stopped (step-up/step-down stopped)
4	VSS	GND pin
5	CSS	Soft start capacity connection pin
6	CPRO	Protection time setting capacity connection pin
7	T	Test pin, usually connected to GND
8	N.C.	Non connection
9	FB	FB pin
10	N.C.	Non connection
11	EXT3	External transistor drive pin 3
12	DVSS	Digital GND pin
13	EXT2	External transistor drive pin 2
14	LX	Coil connection pin
15	EXT1	External transistor drive pin 1
16	BST	Boost capacitor pin for SW1 drive

■ BLOCK DIAGRAM AND CIRCUIT CONNECTION EXAMPLE

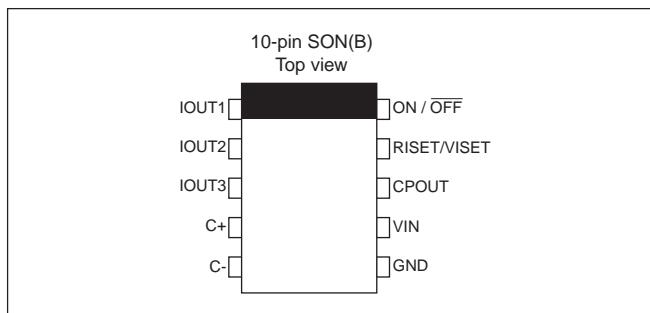

Remark Diodes in the internal IC are parasitic diodes.

3-CHANNEL WHITE LED DRIVER IC (CHARGE PUMP IC WITH BUILT-IN CONSTANT CURRENT CIRCUIT)

S-8813 series

The S-8813 series is a CMOS charge pump DC-DC converter with a built-in constant current circuit. The constant current output feature is ideal for the power supply of LEDs. There are three output channels so three LEDs can be driven. Variable voltage and variable current setting resistor types are available. Since small ceramic capacitors can be used for the external capacitors such as the pump capacitor, input capacitor, and output capacitor, the mounting area can be minimized.

PIN CONFIGURATION

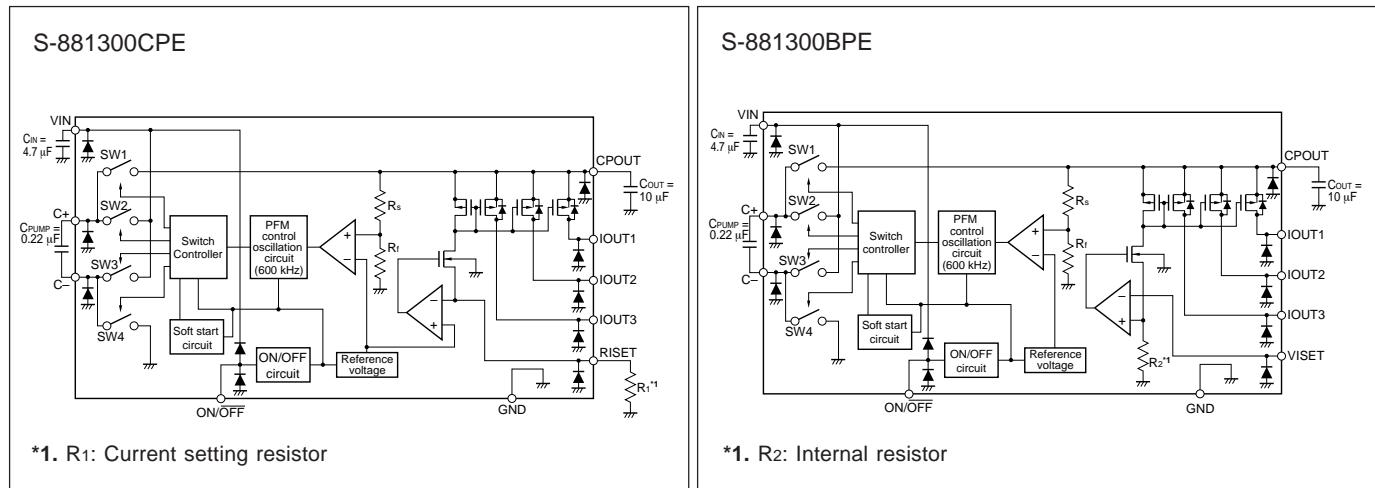

FEATURES

- PFM control CMOS charge pump
- Built-in constant current circuit
- Power supply voltage: 2.7 to 4.5 V
- Output current value:
The two types, a current variable enable variable voltage type and a current setting variable resistor type, are available between 5.0 mA and 18.0 mA (When $V_{OUT1,2,3} \leq 4.0$ V, $V_{IN} = 3.0$ V)
 - Output current dispersion among pins: $\pm 1\%$ max.
 - Built-in soft start circuit: 1.5 ms typ.
 - Constant current output pin: 3 ch $\pm 5\%$ precision
 - Oscillation frequency: 600 kHz typ.
 - ON/OFF function available (during standby: 1 μ A max.)
 - Light control function: Variable via external resistor (S-881300CPE)
Variable via external input voltage (S-881300BPE)
Variable via PWM signal (S-881300CPE)
 - Ultra-small package: 10-pin SON(B)

APPLICATIONS

- Power supply for white LED display backlight
- Constant current circuit
- Cellular phone and PDA with 1 cell lithium battery
- Power supply for flat panel display

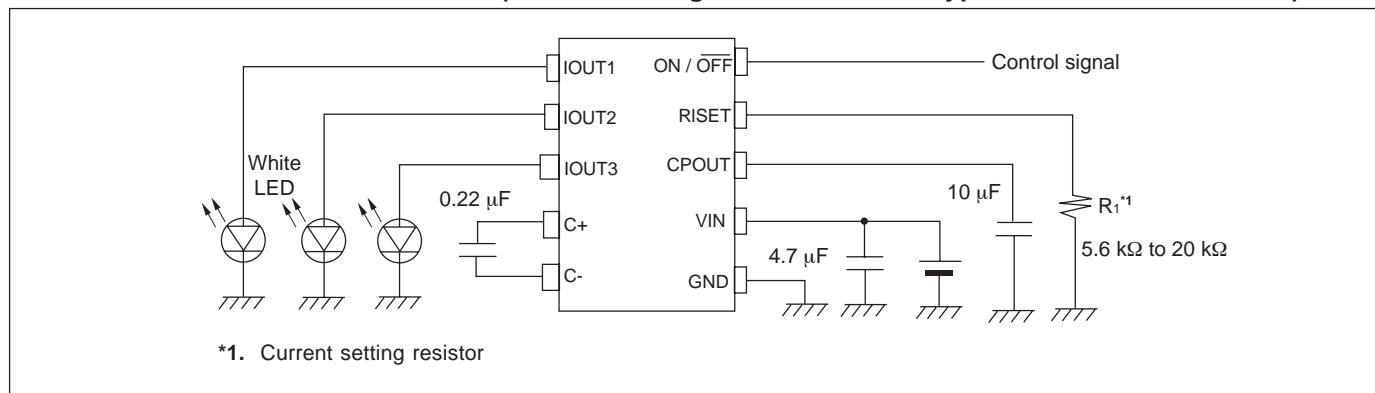

BLOCK DIAGRAM

PRODUCTS

- S-881300CPE-IPATFG (Current setting variable resistor type)
- S-881300BPE-IOQTFG (Variable voltage type)

APPLICATION CIRCUIT EXAMPLE (Current setting variable resistor type: S-881300CPE-IPATFG)

STEP-UP CHARGE PUMP DC-DC CONVERTER

S-8821 series

The S-8821 series is a CMOS step-up charge pump DC-DC converter with a voltage regulation function. The S-8821 series consists of an oscillation circuit, a controller, a reference voltage circuit, an error amplifier circuit, and an output switching transistor, and can regulate the output voltage by PFM control. Since small ceramic capacitors can be used for the pump capacitor, input capacitor, and output capacitor, the mounting area can be minimized.

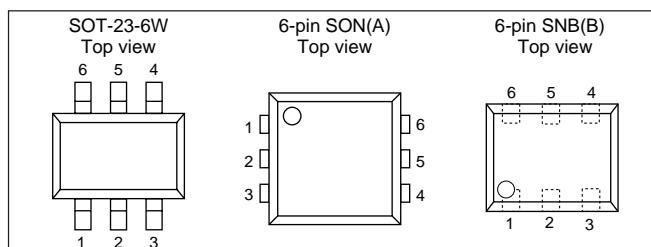

■ FEATURES

- Step-up CMOS charge pump
- Power supply voltage: 1.6 to 5.0 V
- Output voltage: 2.5 to 5.5 V (selectable in 0.1 V steps)
- Output voltage accuracy: $\pm 2\%$
- Output current: $25 \text{ mA} (\text{V}_{\text{IN}} = (\text{V}_{\text{OUT}} \text{ (s)} \times 0.8) \text{ V}$
- Oscillation frequency: 1.0 MHz
- ON/OFF function
- Ultra-small package: 6-pin SON(A), SOT-23-6W, and 6-pin SNB(B)

■ APPLICATIONS

- Lithium ion battery driven applications
- Local power supply

■ PIN CONFIGURATIONS

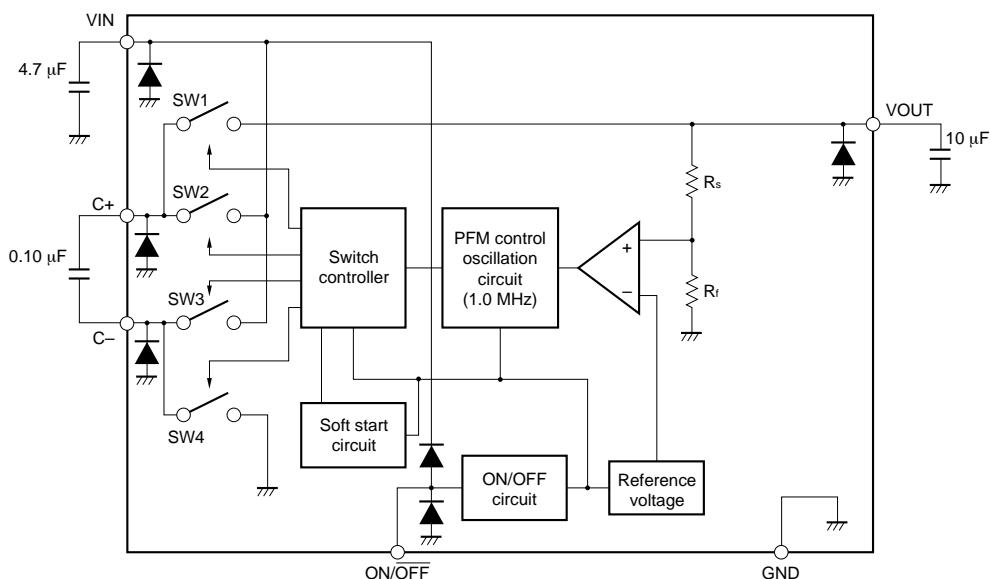

Pin No.			Symbol	Description
SOT-23-6W	6-pin SON(A)	6-pin SNB(B)		
1	5	6	VIN	Voltage input pin
2	4	5	C+	Charge-pump pump capacitor connection pin (positive pin)
3	3	4	C-	Charge-pump pump capacitor connection pin (negative pin)
4	1	3	ON/OFF	Shutdown pin High level (H):normal operation (step-up) Low level (L):step-up halt (all circuits halt)
5	2	2	GND	GND pin
6	6	1	VOUT	Voltage output pin

■ BLOCK DIAGRAM

ULTRA-LOW VOLTAGE OPERATION CHARGE PUMP IC FOR STEP-UP DC-DC CONVERTER STARTUP

▶ NEW S-882Z series

The S-882Z series is a charge pump IC for step-up DC-DC converter startup, which differs from conventional charge pump ICs, in that it uses fully depleted SOI (Silicon on Insulator) technology to enable ultra-low voltage operation.

Being capable of stepping up an extremely low input voltage of 0.3 to 0.35 V, this series enables the efficient use of very low energy levels. The stepped up electric power is stored in a startup capacitor, and it is discharged as the startup power of the step-up DC-DC converter when the startup capacitor reaches the discharge start voltage level.

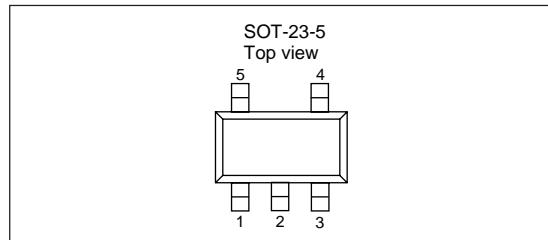

■ FEATURES

- Operating input voltage: 0.3 to 3.0 V
- Current consumption:
 - During operation : 0.5 mA max. (at $V_{IN} = 0.3$ V)
 - During shutdown : 0.6 μ A max. (at $V_{IN} = 0.3$ V)
- Discharge start voltage: 1.8 to 2.4 V (selectable in 0.2 V steps)
- Shutdown voltage:
- Oscillation frequency: 350 kHz typ. (at $V_{IN} = 0.3$ V)
- Small package: SOT-23-5 package
- External component: Startup capacitor (C_{CPOUT}), 1 unit

■ APPLICATIONS

- Stepping up from low-voltage power supply such as solar cell and fuel cell
- Stepping up internal power supply voltage of RF tag
- Intermittent power supply to intermittently operating system

■ PIN CONFIGURATIONS

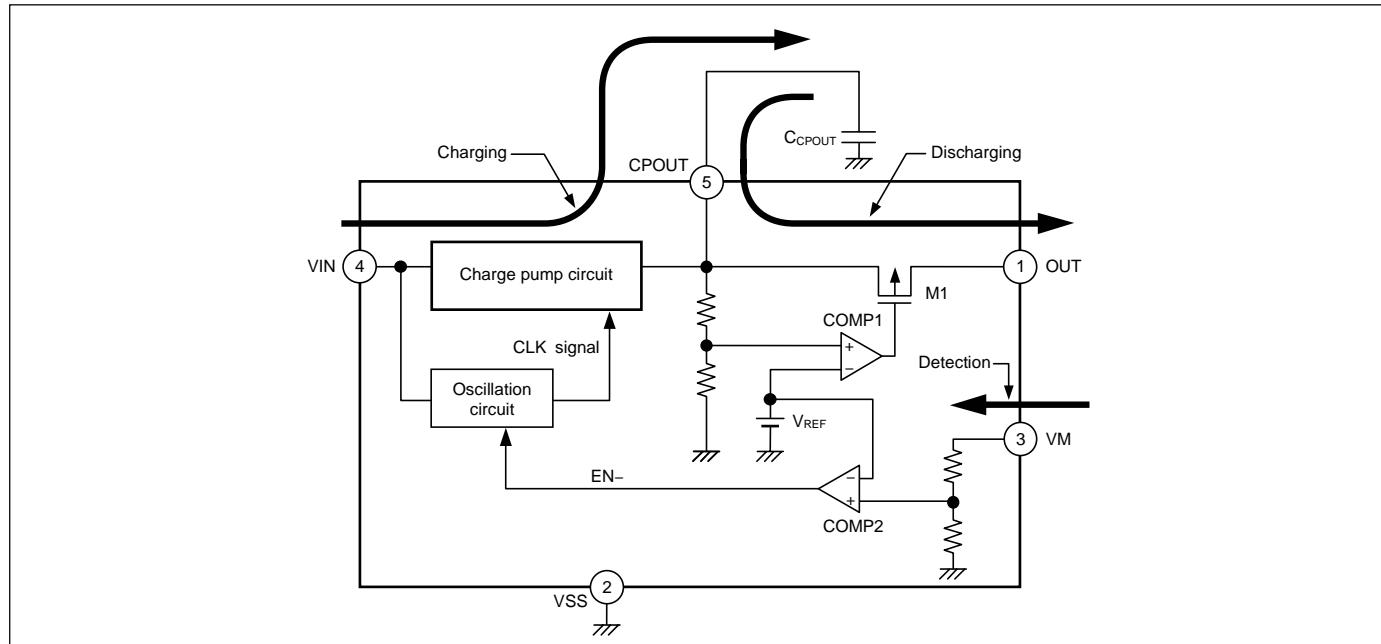

Pin No.	Symbol	Description
1	OUT	Output pin (step-up DC-DC converter connection pin)
2	VSS	GND pin
3	VM	Step-up DC-DC converter output voltage monitor pin
4	VIN	Power supply input pin
5	CPOUT	Startup capacitor connection pin

■ SELECTION GUIDE

Discharge start voltage	Shutdown voltage	SOT-23-5
1.8V \pm 0.1V	1.9V \pm 0.1V	S-882Z18-M5T1G
2.0V \pm 0.1V	2.1V \pm 0.1V	S-882Z20-M5T1G
2.2V \pm 0.1V	2.3V \pm 0.1V	S-882Z22-M5T1G
2.4V \pm 0.1V	2.5V \pm 0.1V	S-882Z24-M5T1G

Remark Contact our sales office for products with discharge start voltage other than those specified above.

HIGH WITHSTANDING-VOLTAGE VOLTAGE REGULATOR WITH RESET FUNCTION

S-87x series

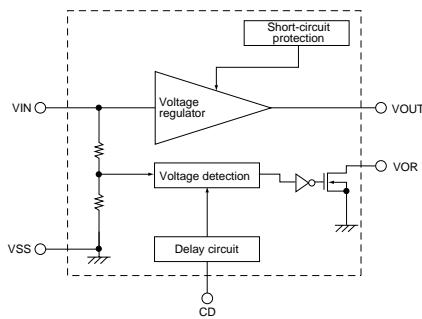

The S-87x series is a low-current-consuming, high-operation-voltage regulator with a reset function that integrates a highly precise voltage detection circuit and a voltage regulator on a single chip. The output voltage and detection voltage are fixed internally and have a $\pm 2.4\%$ accuracy. The S-87x series basically consists of a voltage detector, a voltage regulator, and a short-circuit protection circuit with selection of a delay circuit or a shutdown function also possible. The package is the SOT-89-5.

PIN CONFIGURATION

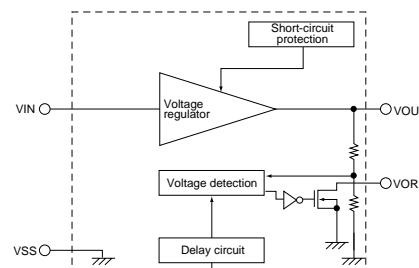

BLOCK DIAGRAM

1) Built-in delay circuit, V_{IN} detection (S-87xxxxA/F series)

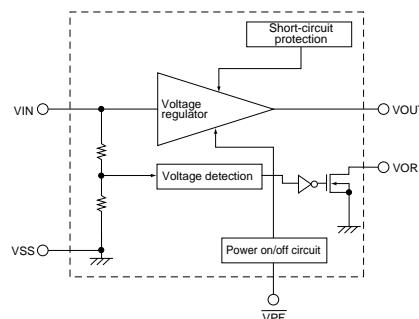

2) Built-in delay circuit, V_{OUT} detection (S-87xxxxB series)

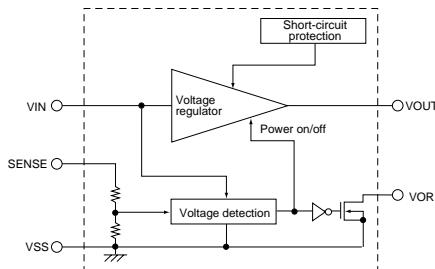

3) Built-in power on/off (regulator only)

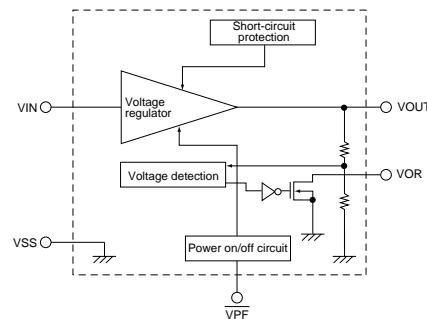

V_{IN} detection (S-87xxxxC series)

4) Built-in power on/off (regulator only) SENSE detection (S-87xxxxE series)

5) Built-in power on/off (regulator only) V_{OUT} detection (S-87xxxxG series)

FUNCTION TABLE

Series name	Voltage detector (VD)	Detection voltage accuracy (%)	Release voltage accuracy (%)	Built-in delay circuit	Power-off function for regulator
S-87xxxxA	V_{IN} detection	$\pm 2.4\%$	-	Yes	No

POWER SUPPLY ICs Composite ICs

BATTERY BACKUP IC

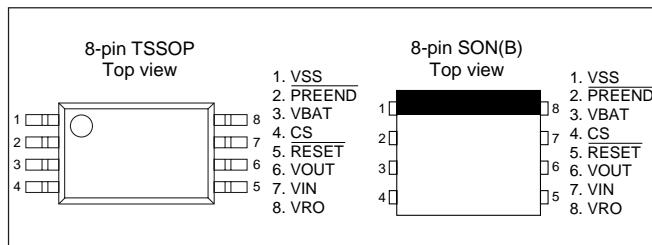

S-8424A series

The S-8424A series is a CMOS IC designed for use in the switching circuits of primary and backup power supplies. It consists of two voltage regulators, three voltage detectors, a power supply switch and its controller, as well as other functions on a single chip.

In addition to the switching function between the primary and backup power supply, the S-8424A series can provide the microcontrollers with three types of voltage detection output signals corresponding to the power supply voltage.

Moreover adopting a special sequence for switch control enables the effective use of the backup power supply, making this IC ideal for configuring a backup system.

BLOCK DIAGRAM

FEATURES

- Low current consumption
15 μ A max. ($V_{IN} = 6$ V, during normal operation)
2.1 μ A max. (during backup)
- Voltage regulator
• Output voltage accuracy: $\pm 2\%$
• Output voltage: 2.3 V to 5.4 V (selectable in 0.1 V steps)
- Three built-in voltage detectors (CS, PREEND, RESET)
• Detection voltage accuracy: $\pm 2\%$
• Detection voltage: 2.4 V to 5.3 V (selectable in 0.1 V steps)
(CS voltage detector)
1.7 V to 3.4 V (selectable in 0.1 V steps)
(PREEND, RESET voltage detector)
- Switching circuit for primary power supply and backup power supply configurable on one chip
- Efficient use of backup power supply possible
- Special sequence
Backup voltage is not output when the primary power supply voltage does not reach the initial voltage at which the switch unit operates.
- Package: 8-pin TSSOP
8-pin SON(B)

APPLICATIONS

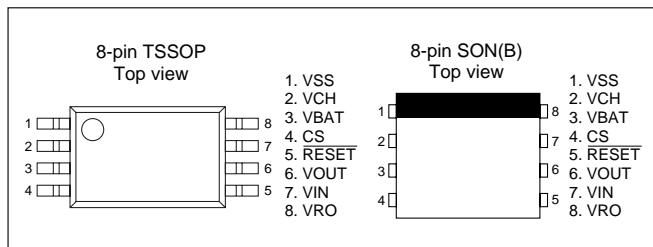

- Camcorders
- Digital still cameras
- Memory cards
- SRAM backup equipment

BATTERY BACKUP IC**S-8425 series**

The S-8425 series is a CMOS IC designed for use in the switching circuits of primary and backup power supplies. It consists of three voltage regulators, two voltage detectors, a power supply switch and its controller, as well as other functions on a single chip.

In addition to the function for switching between the primary and backup power supply, the S-8425 series can provide microcontrollers with two types of voltage detection output signals corresponding to the power supply voltage.

Moreover, adopting a special sequence for switch control enables the effective use of the backup power supply, making this IC ideal for configuring a backup system.

■ PIN CONFIGURATION**■ FEATURES**

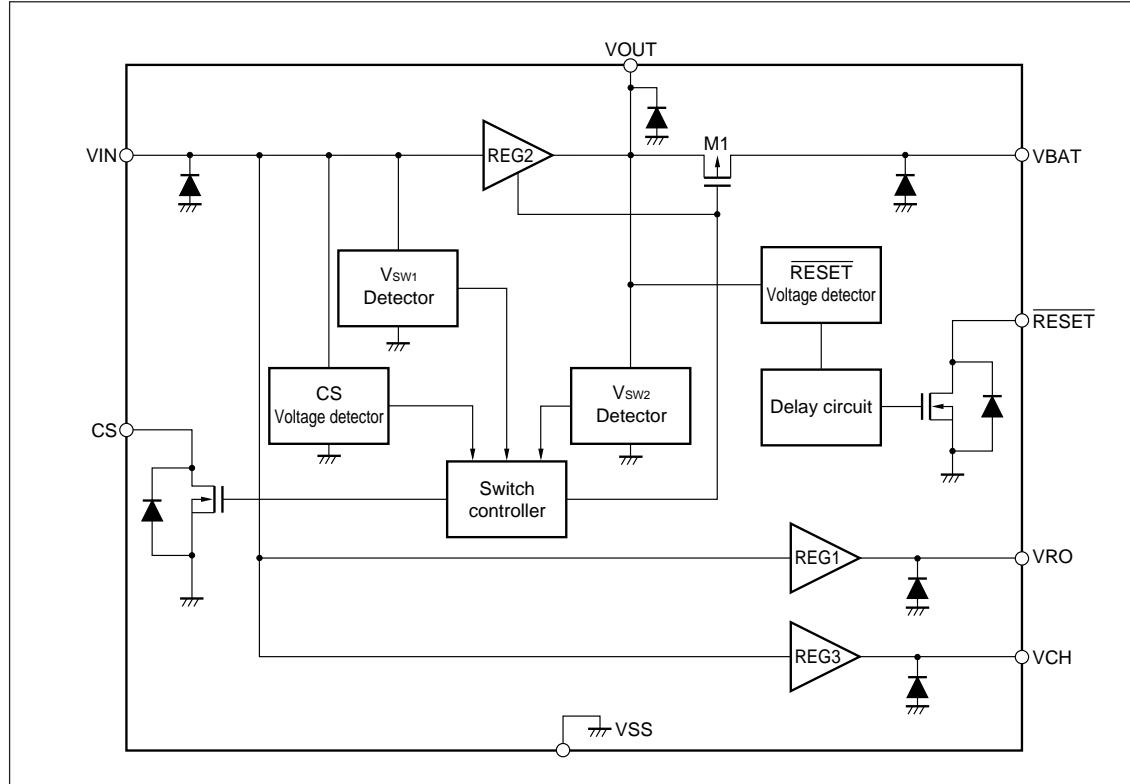

- Low current consumption
15 μ A max. (V_{IN} = 6 V, during normal operation)
2.1 μ A max. (during backup)
- Voltage regulator
 - Output voltage accuracy: $\pm 2\%$
 - Output voltage: Independently selectable in 0.1 V steps in the range of 2.3 V to 5.4 V
- Two built-in voltage detectors (CS, RESET)
 - Detection voltage accuracy: $\pm 2\%$
 - Detection voltage: Selectable in 0.1 V steps in the range of 2.4 V to 5.3 V (CS voltage detector)
Selectable in 0.1 V steps in the range of 1.7 V to 3.4 V (RESET voltage detector)
- RESET release delay: 300 μ s min.
- Switching circuit for primary power supply and backup power supply configurable on one chip
- Efficient use of backup power supply possible
- Special sequence
 - Backup voltage is not output when the primary power supply voltage does not reach the initial voltage at which the switch unit operates.
- Package: 8-pin TSSOP
8-pin SON(B)

■ APPLICATIONS

- Camcorders
- Digital still cameras
- Memory cards
- SRAM backup equipment

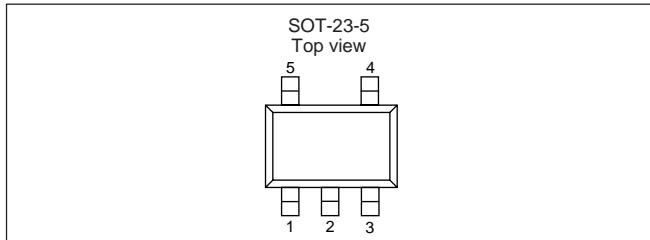

■ SELECTION GUIDE

Item	Package	Output voltage (V)			CS voltage (V)		RESET voltage (V)		Switch voltage (V)	
		V _{RO}	V _{OUT}	V _{CH}	-V _{DET1}	+V _{DET1}	-V _{DET2}	+V _{DET2}	V _{SW1}	
S-8425AAFT-TB-G	8-pin TSSOP	3.000	3.000	3.300	3.300	3.401	2.200	2.312	+V _{DET1} × 0.85

■ BLOCK DIAGRAM

BATTERY PROTECTION IC FOR 1-CELL PACK► NEW **S-8211A/C series**

The S-8211A/C series are protection ICs for single-cell lithium-ion/lithium-polymer rechargeable batteries and include high-accuracy voltage detectors and delay circuits. These ICs are suitable for protecting single-cell rechargeable lithium-ion/lithium-polymer battery packs from overcharge, overdischarge, and overcurrent.

■ PIN CONFIGURATION

Pin No.	Symbol	Description
1	VM	Voltage detection between VM pin and VSS pin (Overcurrent/charger detection pin)
2	VDD	Connection for positive power supply input
3	VSS	Connection for negative power supply input
4	DO	Connection of discharge control FET gate (CMOS output)
5	CO	Connection of charge control FET gate (CMOS output)

Pin No.	Symbol	Description
1	NC	No connection
2	CO	Connection of charge control FET gate (CMOS output)
3	DO	Connection of discharge control FET gate (CMOS output)
4	VSS	Connection for negative power supply input
5	VDD	Connection for positive power supply input
6	VM	Voltage detection between VM pin and VSS pin (Overcurrent/charger detection pin)

■ FEATURES

- High-accuracy voltage detection circuit
- Overcharge detection voltage:
3.9 to 4.4 V (5 mV steps)
Accuracy ± 25 mV ($+25^{\circ}\text{C}$)
Accuracy ± 30 mV (-5 to $+55^{\circ}\text{C}$)
- Overcharge release voltage:
3.8 to 4.4 V^{*1} Accuracy ± 50 mV
- Overdischarge detection voltage:
2.0 to 3.0 V (10 mV steps) Accuracy ± 50 mV
- Overdischarge release voltage:
2.0 to 3.4 V^{*2} Accuracy ± 100 mV
- Discharge overcurrent detection voltage:
0.05 to 0.30 V (10 mV steps) Accuracy ± 15 mV
- Load short-circuiting detection voltage:
S-8211A series: 1.2 V (fixed) Accuracy ± 300 mV
S-8211C series: 0.5 V (fixed) Accuracy ± 200 mV
- Charge overcurrent detection voltage:
-0.1 V (fixed) Accuracy ± 30 mV
- Detection delay times are generated by an internal circuit (external capacitors are unnecessary).
Accuracy $\pm 20\%$
- High-withstanding-voltage device is used for charger connection pins (VM pin and CO pin : Absolute maximum rating = 28 V)
- 0 V battery charge function available/unavailable are selectable.
- Shutdown function Yes/No are selectable.
- Wide operating temperature range -40 to $+85^{\circ}\text{C}$
- Low current consumption
- Operation mode 3.0 μA typ., 5.5 μA max. ($+25^{\circ}\text{C}$)
- Power-down mode 0.2 μA max. ($+25^{\circ}\text{C}$)
- Small package: SOT-23-5, SNT-6A

*1. Overcharge release voltage = Overcharge detection voltage – Overcharge hysteresis voltage
(Overcharge hysteresis voltage can be selected as 0 V or from a range of 0.1 to 0.4 V in 50 mV steps.)

*2. Overdischarge release voltage = Overdischarge detection voltage + Overdischarge hysteresis voltage
(Overdischarge hysteresis voltage can be selected as 0 V or from a range of 0.1 to 0.7 V in 100 mV steps.)

■ APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

BATTERY PROTECTION IC FOR 1-CELL PACK**S-8261 series**

The S-8261 series is a protection IC for lithium ion/lithium polymer rechargeable batteries and includes a high-precision voltage detection circuit and a delay circuit. This series is the optimal IC for protection against overcharge, overdischarge, and overcurrent in 1-cell lithium ion/lithium-polymer rechargeable battery packs. The withstand voltage of the charger connection pin is improved compared with the S-8241 series.

■ PIN CONFIGURATION

Pin No.	Symbol	Description
1	DO	FET gate connection pin for discharge control (Push-pull (CMOS output))
2	VM	Detection pin of voltage between VM and VSS (Overcurrent detection pin)
3	CO	FET gate connection pin for charge control (Push-pull (CMOS output))
4	DP	Test pin for delay time measurement
5	VDD	Positive power supply input pin
6	VSS	Negative power supply input pin

Pin No.	Symbol	Description
1	CO	FET gate connection pin for charge control (Push-pull (CMOS output))
2	VM	Detection pin of voltage between VM and VSS (Overcurrent detection pin)
3	DO	FET gate connection pin for discharge control (Push-pull (CMOS output))
4	VSS	Negative power supply input pin
5	DP	Test pin for delay time measurement
6	VDD	Positive power supply input pin

■ FEATURES

- Built-in high precision voltage detection circuit
 - Overcharge detection voltage: 3.9 V to 4.4 V, accuracy of ± 25 mV
 - Overcharge hysteresis voltage: 0 V to 0.4 V, accuracy of ± 25 mV
 - Overdischarge detection voltage: 2.0 V to 3.0 V, accuracy of ± 50 mV
 - Overdischarge hysteresis voltage: 0 V to 0.7 V, accuracy of ± 50 mV
- Overcurrent 1 detection voltage: 0.05 V to 0.3 V, accuracy of ± 15 mV
- Overcurrent 2 detection voltage: 0.5 V (fixed), accuracy of ± 100 mV
- A high withstand voltage device is used for the charger connection pin.
Absolute maximum rating: 28 V
- Various delay times are realized with a built-in circuit only. $\pm 20\%$ accuracy
- Three-stage overcurrent detection circuit built-in
 - Overcurrent 1, overcurrent 2, load short circuit
- 0 V battery charge function available/unavailable are selectable
- Charger detection function and unusual charge current detection function available
- Low current consumption: 3.5 μ A typ., 7.0 μ A max. (during operation)
0.1 μ A max. (during power-down)
- Wide operating temperature range: -40°C to $+85^{\circ}\text{C}$
- Small package:
SOT-23-6
6-pin SNB(B)

■ APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

BATTERY PROTECTION IC FOR 1-CELL PACK**S-8241 series**

The S-8241 series is a protection IC for lithium ion/lithium polymer rechargeable batteries and includes a high-precision voltage detection circuit and a delay circuit. It is the optimal IC for protection against overcharge, overdischarge, and overcurrent in 1-cell lithium-ion/lithium polymer rechargeable battery packs.

■ PIN CONFIGURATION

Pin No.	Symbol	Description
1	VM	Detection pin of voltage between VM and VSS (overcurrent detection pin)
2	VDD	Positive power supply input pin
3	VSS	Negative power supply input pin
4	DO	FET gate for discharge control connection pin (Push-pull (CMOS output))
5	CO	FET gate for charge control connection pin (Push-pull (CMOS output))

Pin No.	Symbol	Description
1	VM	Detection pin of voltage between VM and VSS (overcurrent detection pin)
2	VDD	Positive power supply input pin
3	CO	FET gate for charge control connection pin (Push-pull (CMOS output))
4	DO	FET gate for discharge control connection pin (Push-pull (CMOS output))
5	VSS	Negative power supply input pin

■ FEATURES

- Built-in high-precision voltage detection circuit
 - Overcharge detection voltage: 3.9 V to 4.4 V (in 5 mV steps), accuracy: ± 25 mV (25°C), and ± 30 mV (-5°C to $+55^\circ\text{C}$)
 - Overcharge release voltage: 3.8 V to 4.4 V¹, accuracy: ± 50 mV
 - Overdischarge detection voltage: 2.0 V to 3.0 V (in 100 mV steps), accuracy: ± 80 mV
 - Overdischarge release voltage: 2.0 V to 3.4 V², accuracy: ± 100 mV
 - Overcurrent 1 detection voltage: 0.05 V to 0.3 V (in 5 mV steps), accuracy: ± 20 mV
 - Overcurrent 2 detection voltage: 0.5 V (fixed), accuracy: ± 100 mV
- *1. Overcharge release voltage = Overcharge detection voltage - Overcharge hysteresis width
Overcharge hysteresis width can be selected as 0.0 V or from between 0.1 V and 0.4 V in 50 mV steps.
- *2. Overdischarge release voltage = Overdischarge detection voltage + Overdischarge hysteresis width
Overdischarge hysteresis width can be selected from between 0.0 V and 0.7 V in 100 mV steps.
- A high withstand voltage device is used for the charger connection pin (VM pin, CO pin: absolute maximum rating = 26 V)
- Various delay times: A built-in circuit can generate overcharge: tcu, overdischarge: tdl, overcurrent 1: tiov1, and overcurrent 2: tiov2 with no external capacitor. Accuracy: $\pm 30\%$
- Three-stage over-current detection circuit built-in (overcurrent 1, overcurrent 2, load short circuit)
- 0 V battery charge function available/unavailable are selectable
- Selection of shutdown function is possible. (Yes/No)
- Charger detection function and unusual charge current detection function available
- Small package: SOT-23-5 and 5-pin SON(A)
- Low current consumption:
3.0 μA typ. 5.0 μA max. (during operation)
0.1 μA max. (during power-down)
- Wide operating temperature range: -40°C to $+85^\circ\text{C}$

■ APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

*1. Refer to the delay time combination

Remarks 1. Please contact the SII marketing department for the products with detection voltage value other than those specified above.

2. S-8241xxxMC: SOT-23-5 (3000/reel), S-8241xxxPN: 5-pin SON(A) (3000/reel)

Delay time combination

Delay time combination	Overcharge detection delay time	Overdischarge detection delay time	Overcurrent 1 detection delay time
(1)	1.0 s	125 ms	8 ms
(2)	0.125 s	31 ms	16 ms
(3)	0.25 s	125 ms	8 ms
(4)	2.0 s	125 ms	8 ms

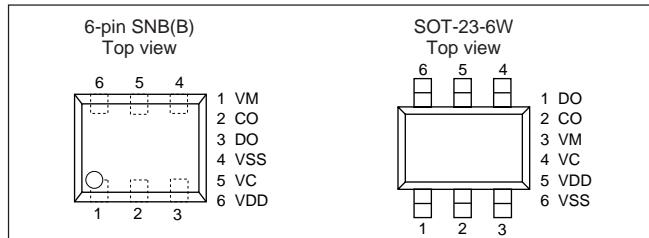

BATTERY PROTECTION IC FOR 2-SERIAL-CELL PACK

S-8242 series

The S-8242 Series are protection ICs for 2-serial-cell lithium ion/lithium polymer rechargeable batteries and include high-accuracy voltage detectors and delay circuits.

These ICs are suitable for protecting 2-cell rechargeable lithium-ion/lithium-polymer battery packs from overcharge, overdischarge, and overcurrent.

PIN CONFIGURATIONS

FEATURES

- (1) High-accuracy voltage detection for each cell
 - Overcharge detection voltage n ($n = 1, 2$)
3.9 to 4.4 V (50 mV steps) Accuracy ± 25 mV
 - Overcharge release voltage n ($n = 1, 2$)
3.8 to 4.4 V*1 Accuracy ± 50 mV
 - Overdischarge detection voltage n ($n = 1, 2$)
2.0 to 3.0 V (100 mV steps) Accuracy ± 50 mV
 - Overdischarge release voltage n ($n = 1, 2$)
2.0 to 3.4 V*2 Accuracy ± 100 mV
- *1. Overcharge release voltage = Overcharge detection voltage – Overcharge hysteresis voltage
(Overcharge hysteresis voltage n ($n = 1, 2$) can be selected as 0 V or from a range of 0.1 to 0.4 V in 50 mV steps.)
- *2. Overdischarge release voltage = Overdischarge detection voltage + Overdischarge hysteresis voltage
(Overdischarge hysteresis voltage n ($n = 1, 2$) can be selected as 0 V or from a range of 0.1 to 0.7 V in 100 mV steps.)
- (2) Two-level overcurrent detection (overcurrent 1, overcurrent 2)
 - Overcurrent detection voltage 1
0.05 V, 0.08 to 0.30 V (10 mV steps) Accuracy ± 15 mV
 - Overcurrent detection voltage 2
1.2 V (fixed) Accuracy ± 300 mV
- (3) Delay times (overcharge, overdischarge, overcurrent) are generated by an internal circuit (external capacitors are unnecessary).
- (4) 0 V battery charge function available/unavailable are selectable.
- (5) Charger detection function
 - The overdischarge hysteresis is released by detecting negative voltage at the VM pin (-0.7 V typ.). (Charger detection function)
- (6) High-withstanding-voltage devices
 - Absolute maximum rating: 28 V
- (7) Wide operating temperature range -40 to +85°C
- (8) Low current consumption
 - Operation mode 10 μ A max. (+25°C)
 - Power-down mode 0.1 μ A max. (+25°C)
- (9) Small package SOT-23-6W, 6-Pin SNB(B)

APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

BATTERY PROTECTION IC FOR 2-SERIAL-CELL PACK**S-8232 series**

The S-8232 series is a series of lithium ion rechargeable battery protection ICs incorporating high-accuracy voltage detection circuits and delay circuits.

This series is suitable for a 2-cell lithium-ion battery pack.

PIN CONFIGURATION**FEATURES**

- Built-in high-accuracy voltage detection circuit
 - Overcharge detection voltage: $3.90\text{ V} \pm 25\text{ mV}$ to $4.60\text{ V} \pm 25\text{ mV}$ (5 mV steps)
 - Overcharge release voltage: $3.60\text{ V} \pm 50\text{ mV}$ to $4.60\text{ V} \pm 50\text{ mV}$ (5 mV steps)
- (The overcharge release voltage can be selected from within a range of a 0 to 0.3 V differential from the overcharge detection voltage)
- Overdischarge detection voltage: $1.70\text{ V} \pm 80\text{ mV}$ to $2.60\text{ V} \pm 80\text{ mV}$ (50 mV steps)
- Overdischarge release voltage: $1.70\text{ V} \pm 100\text{ mV}$ to $3.80\text{ V} \pm 100\text{ mV}$ (50 mV steps)
- (The overdischarge release voltage can be selected from within a range of a 0 to 1.2 V differential from the overdischarge detection voltage)
- Overcurrent detection voltage 1: $0.07\text{ V} \pm 20\text{ mV}$ to $0.30\text{ V} \pm 20\text{ mV}$ (5 mV steps)
- High input-voltage device: Absolute maximum rating: 18 V
- Wide operating voltage range: 2.0 V to 16 V
- The delay time for overcharge detection, overdischarge detection, and overcurrent detection can be set via an external capacitor. The respective time ratios are 100:10:1.
- Two overcurrent detection levels (protection for short-circuiting)
- Internal auxiliary overcharge detection circuit (fail-safe for overcharge detection)
- 0 V battery charging function ("Charge-prohibited" can be set by an option)
- Low current consumption
 - $7.5\text{ }\mu\text{A}$ typ., $14.2\text{ }\mu\text{A}$ max. (-40 to $+85^\circ\text{C}$, during operation)
 - 0.2 nA typ., $0.1\text{ }\mu\text{A}$ max. (-40 to $+85^\circ\text{C}$, during power-down)
- Small package: 8-pin TSSOP
(Mounting area: 6.4 mm × 3.1 mm)

APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

*1. Confirm the operation using the data sheet. With overdischarge detection/release hysteresis, without final overcharge function, without 0 V charging function.

*2. No overcharge detection/release hysteresis.

*3. Final overcharge magnification: $\times 1.11$. Other: $\times 1.25$.

*4. Without final overcharge function.

Remarks 1. Please contact our sales office if a product with a detection voltage other than the above is required.

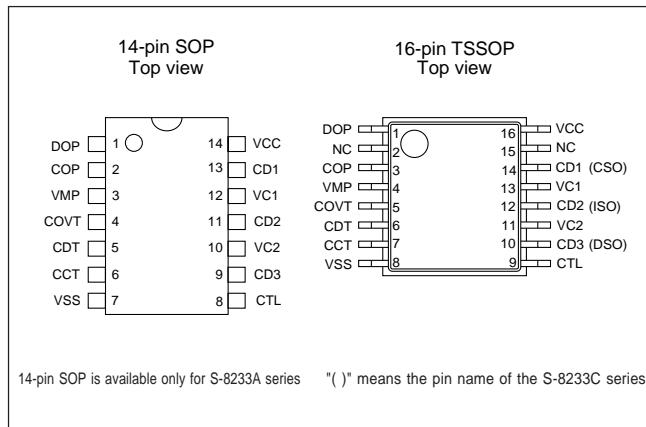

2. Be sure to design all applications of the S-8232 series with emphasis on safety.

BATTERY PROTECTION IC FOR 3-SERIAL-CELL PACK

S-8233A/B/C series

The S-8233A/B/C series is a series of lithium ion rechargeable battery protection ICs incorporating high-accuracy voltage detectors and a delay circuit. This series is suitable for protecting a three-cell pack.

PIN CONFIGURATIONS

FEATURES

- Built-in high-accuracy voltage detection circuit
 - Overcharge detection voltage: $4.10\text{ V} \pm 0.05\text{ V}$ to $4.35\text{ V} \pm 0.05\text{ V}$ (0.05 V steps)
 - Accuracy of overcharge detection voltage: $\pm 25\text{ mV}$ (B series)
 - Overcharge release voltage: $3.85\text{ V} \pm 0.10\text{ V}$ to $4.35\text{ V} \pm 0.10\text{ V}$ (0.05 V steps)
- (The overcharge release voltage can be selected from within a range of a 0 to 0.3 V differential from the overcharge detection voltage)
- Overdischarge detection voltage: $2.00\text{ V} \pm 0.08\text{ V}$ to $2.70\text{ V} \pm 0.08\text{ V}$ (0.10 V steps)
- Overdischarge release voltage: $2.00\text{ V} \pm 0.10\text{ V}$ to $3.70\text{ V} \pm 0.10\text{ V}$ (0.10 V steps)
- (The overdischarge release voltage can be selected from within a range of a 0 to 1.0 V differential from the overdischarge detection voltage)
- Overcurrent detection voltage 1: $0.15\text{ V} \pm 10\%$ to $0.50\text{ V} \pm 10\%$ (0.05 V steps)
- Function for checking battery-pack status (C series)
- High input-voltage device: Absolute maximum rating: 26 V
- Wide operating voltage range: 2 V to 24 V
- The delay time for each type of detection can be set via an external capacitor.
- Three overcurrent detection levels (protection for short-circuiting)
- Internal charge/discharge prohibition circuit via the control pin
- A function for charging batteries from 0 V is available.
- Low current consumption
 $50\text{ }\mu\text{A}$ max. (+25°C, during operation)
 $0.1\text{ }\mu\text{A}$ max. (+25°C, during power-down)
- Package: 14-pin SOP (A series only)
16-pin TSSOP

APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

BATTERY PROTECTION IC FOR 2-SERIAL OR 3-SERIAL CELL PACK**S-8253A/B series**

The S-8253A/B series are ICs for protecting 2-cell or 3-cell lithium ion rechargeable batteries and incorporate high-accuracy voltage detection and delay circuits. The S-8243A/B series are suitable for protecting lithium-ion battery packs from overcharge, overdischarge and overcurrent.

■ PIN CONFIGURATION

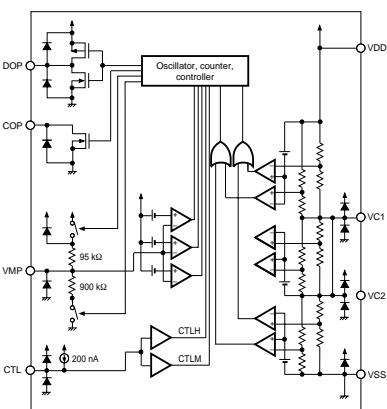

Pin No.	Symbol	Description
1	DOP	Connection of discharge control FET gate (CMOS output)
2	COP	Connection of charge control FET gate (N-ch open-drain output)
3	VMP	Voltage detection between VDD and VMP (overcurrent detection pin)
4	CTL	Input of charge/discharge control signal, pin for shortening test time (L: Normal operation, H: Charge/discharge inhibited, M ($V_{DD} \times 1/2$): Test time reduced)
5	VSS	Connection for negative power supply input and negative voltage of battery 2
6	VC2	S-8253A series S-8253B series Connection for negative voltage of battery 2 and positive voltage of battery 3
7	VC1	Connection for negative voltage of battery 1 and positive voltage of battery 2
8	VDD	Connection for positive power supply input and positive voltage of battery 1

*1. In the case of the S-8253A.

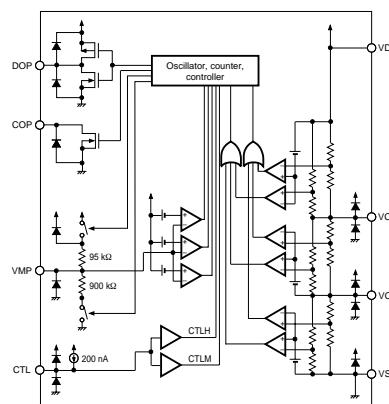

"No connection" means electrically open. In this case, this pin can be connected to VDD or VSS.

BATTERY PROTECTION IC FOR 3-SERIAL OR 4-SERIAL CELL PACK

S-8243A/B series

The S-8243A/B series is lithium ion rechargeable battery protection IC incorporating high-accuracy battery protection circuits, a battery monitor amp and a voltage regulator.

The S-8243A/B series is suitable for protection of 3-serial or 4-serial cell lithium-ion battery packs from overcharge, overdischarge and overcurrent. Combining this series with a microcomputer or gas gauge IC makes it possible to indicate the remaining battery.

■ BLOCK DIAGRAM

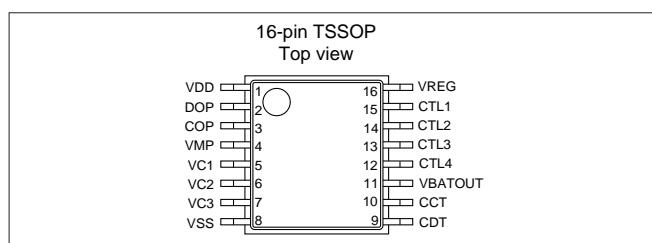

■ FEATURES

- High-accuracy voltage detection for each cell
 - Overcharge detection voltage n ($n = 1$ to 4)
3.9 V to 4.4 V (50 mV step), accuracy ± 25 mV
 - Hysteresis voltage n ($n = 1$ to 4) of overcharge detection
-0.10 V to -0.40 V or 0 V (50 mV step), accuracy ± 50 mV
(Overcharge release voltage n (= Overcharge detection voltage n + Hysteresis voltage n) can be selected within the range 3.8 V to 4.4 V.)
 - Overdischarge detection voltage n ($n = 1$ to 4)
2.0 V to 3.0 V (100 mV step), accuracy ± 80 mV
 - Hysteresis voltage n ($n = 1$ to 4) of overdischarge detection
0.20 V to 0.70 V or 0 V (100 mV step), accuracy ± 100 mV
(Overdischarge release voltage n (= Overdischarge detection voltage n + Hysteresis voltage n) can be selected within the range 2.0 V to 3.4 V.)
- Three-level overcurrent protection including protection for short-circuiting
 - Overcurrent detection voltage 1
0.05 V to 0.3 V (50 mV step), accuracy ± 25 mV
 - Overcurrent detection voltage 2
0.5 V, accuracy ± 100 mV
 - Overcurrent detection voltage 3
 $V_{DD}/2$, accuracy $\pm 15\%$
- Delay times for overcharge detection, overdischarge detection and overcurrent detection 1 can be set by an external capacitor.
(Delay times for overcurrent detection 2 and 3 are fixed internally.)
- Charge/discharge operation can be controlled through the control pins.
- High-accuracy battery monitor amp
 $GAMP = V_{BATTERY} \times 0.2 \pm 1.0\%$
- Voltage regulator
 $V_{OUT} = 3.3 V \pm 2.4\%$ (3 mA max.)
- High input-voltage device
Absolute maximum rating: 26 V
- Wide operating voltage range: 6 V to 18 V
- Wide operating temperature range: -40°C to +85°C
- Low current consumption
120 µA max. (during operation)
0.1 µA max. (during power-down)
- Small package: 16-pin TSSOP

■ APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

BATTERY PROTECTION IC FOR 3-SERIAL OR 4-SERIAL CELL PACK**S-8254 series**

The S-8254 series are lithium ion rechargeable battery protection ICs for 3-cell or 4-cell batteries in series and incorporate high-accuracy voltage detectors and a delay circuit. Whether the IC is used for a 3-cell or 4-cell battery can be selected using the SEL pin.

■ PIN CONFIGURATIONS**■ FEATURES**

- Built-in high-accuracy voltage detection circuit
 - Overcharge detection voltage: 3.90 V to 4.40 V (0.05 V steps)
 - Accuracy of overcharge detection voltage: ± 25 mV
 - Overcharge release voltage: 3.80 V to 4.40 V (0.05 V steps)
 - Overdischarge detection voltage: 2.00 V to 3.00 V (0.10 V steps)
 - Overdischarge detection voltage accuracy: ± 80 mV
 - Overdischarge release voltage: 2.00 V to 3.40 V (0.10 V steps)
- High input-voltage device: Absolute maximum rating: 26 V
- Wide operating voltage range: 2 V to 24 V
- Wide operating temperature range: -45 to +85°C
- Three overcurrent detection levels (protection for short-circuiting)
- Overcharge detection delay time, overdischarge detection delay time, and overcurrent detection delay time 1 settable via external capacitor
- 3-serial cell and 4-serial cell switchable via SEL pin
- Charge/discharge controllable via control pin
- Low current consumption: 30 μ A max. (+25°C, during operation)
0.1 μ A max. (+25°C, during power-down)
- Package: 16-pin TSSOP

■ APPLICATIONS

- Lithium ion rechargeable battery packs
- Lithium polymer rechargeable battery packs

Remarks 1. Please contact our sales office if a product with a detection voltage other than the above is required.

2. Be sure to design all applications of the S-8254 series with emphasis on safety.

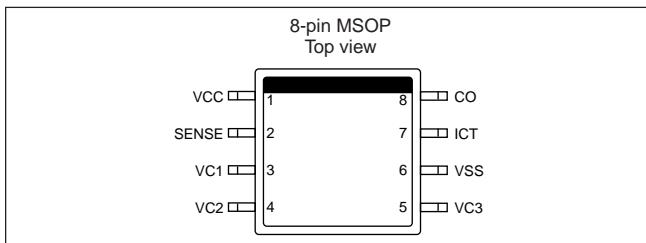

BATTERY PROTECTION IC FOR 1 TO 4-SERIAL CELL PACK (SECONDARY PROTECTION)

S-8244 series

The S-8244 series is a rechargeable lithium ion battery secondary protection IC with a built-in high-precision voltage detection circuit and delay circuit.

By short-circuiting between each cell, this series can be used for 1 to 4 cells in a series connection.

■ PIN CONFIGURATION

■ FEATURES

- Built-in high-precision voltage detection circuit
 - Overcharge detection voltage: 3.7 V to 4.5 V (in 5 mV steps), accuracy: $\pm 25 \text{ mV}$ (25°C), and $\pm 50 \text{ mV}$ (-40°C to $+85^\circ\text{C}$)
 - Hysteresis: Selection of one of the following five values is possible.
 $0.38 \text{ V} \pm 0.1 \text{ V}$, $0.25 \text{ V} \pm 0.07 \text{ V}$, $0.13 \text{ V} \pm 0.04 \text{ V}$, $0.045 \text{ V} \pm 0.02 \text{ V}$, none
- A high withstanding voltage device is used for the charger connection pin. (Absolute maximum rating = 26 V)
- Wide operation voltage range: 3.6 V to 24 V (Normal operation range of delay circuit in overvoltage detection)
- The delay time at detection can be set by an external capacitor.
- Low current consumption
 - $3.0 \mu\text{A}$ max. ($+25^\circ\text{C}$, 3.5 V for each cell)
 - $2.4 \mu\text{A}$ max. ($+25^\circ\text{C}$, 2.3 V for each cell)
- Small package: 8-pin MSOP
- Output signal type and logic: Selection of one of the following four types is possible.
 - Push-pull (CMOS output), active "H"
 - Push-pull (CMOS output), active "L"
 - P-ch open-drain output, active "L"
 - Open-drain (Nch open-drain) output, active "H"

(The product with a 0.045 V hysteresis is only applicable for Push-pull (CMOS output).)

■ APPLICATIONS

- Lithium ion rechargeable battery packs (for secondary protection)
- Lithium polymer rechargeable battery packs
(for secondary protection)

Remark Please contact our sales office if a product with a detection voltage other than the above is required.

Memory Lineup

HIGH-RELIABILITY, SUPER-SMALL PACKAGE 2-WIRE SERIAL E²PROM

The S-24CS01A/02A/04A/08A/16A/64A/128A are 2-wire, low-power-consumption serial E²PROMs with a wide operating voltage range. Depending on the product, the memory size is 1 Kb, 2 Kb, 4 Kb, 8 Kb, 16 Kb, 64 Kb or 128 Kb. An endurance of 1 million cycles (100,000 in some products) over a wide temperature range (-40 to +85°C) is guaranteed and data can be retained for even after 1 million rewrites (100,000 rewrites for some models), making these highly reliable memories.

These products feature a function to prohibit writing during low-voltage supply and enable page write and sequential read.

The use of a super-small SNT¹ package and WLP² means that these memories are excellent for small and thin applications such as mobile devices.

*1. Small-outline Non-leaded Thin package

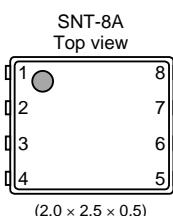

*2. Wafer Level chip size Package

S-24CS01A/02A/04A/08A/16A/64A/128A

■ FEATURES

- Low current consumption: 2.0 µA (S-24CS01A/02A/04A/08A)
(Vcc = 5.5 V, during standby)
5.0 µA (S-24CS16A/64A)
(Vcc = 5.5 V, during standby)
0.8 mA max.
(Vcc = 5.5 V, during reading)
- Operating voltage range: 1.8 to 5.5 V (during reading)
2.7 to 5.5 V (during writing)
- Page write: 8 bytes/page (S-24CS01A/02A)
16 bytes/page (S-24CS04A/08A/16A)
32 bytes/page (S-24CS64A)
- Sequential read
- Operating frequency: 400 kHz (Vcc = 4.5 to 5.5V)
- Endurance
 - S-24CS01A/02A/04A/08A: Up to 10 million cycles (25°C)
1 million cycles guaranteed (85°C)
 - S-24CS16A/64A: Up to 1 million cycles (25°C)
100,000 cycles guaranteed (85°C)
- Data retention: 10 years
(after 1 million rewrites or 100,000 rewrites)
- Write protection: 100%
- Write protection under low power supply voltage
- Package:
 - SNT-8A
 - 8-pin DIP
 - 8-pin SOP
 - 8-pin TSSOP
 - WLP-6A
 - WLP-8C

*1. Cycles/word (Word: 8 bits)

HIGH-RELIABILITY, SUPER-SMALL PACKAGE 3-WIRE SERIAL E²PROM

S-93C46B/56B/66B/76A/86B

The S-93C46B/56B/66B/76A/86B are high-speed, low-current-consumption 3-wire E²PROMs with a wide operating voltage range.

Depending on the product, the memory size is 1 Kb, 2 Kb, 4 Kb, 8 Kb, or 16 Kb. It is organized as 64-word × 16-bit, 128-word × 16-bit, 256-word × 16-bit, 512-word × 16-bit, and 1024 words × 16 bits respectively. Each is capable of sequential read, at which time addresses are automatically incremented in 16-bit blocks. The instruction code is compatible with the NM93CSxx.

These highly reliable E²PROM memories feature a guaranteed endurance of 1 million cycles over a wide operating temperature range (-40 to +85°C), data retention of 10 years after 1 million rewrites, and a maximum operating temperature of 105°C.

Built-in data protection functions such as prohibiting write operations during low-voltage supply and protecting against write due to erroneous instruction recognition make these products ideal for storing important data.

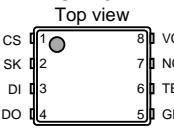

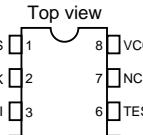

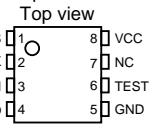

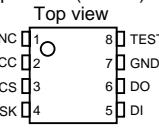

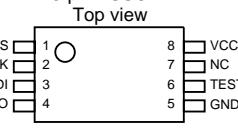

The availability of a super-small SNT[®] package makes these memories ideal for small and thin applications such as mobile devices.

*1. Small-outline Non-leaded Thin package

■ FEATURES

- Low current consumption:
 - 1.5 µA max. (Vcc = 5.5 V, during standby)
 - 0.8 mA max. (Vcc = 5.5 V, during reading)
 - 0.4 mA max. (Vcc = 2.5 V, during reading)
- Wide operating voltage range:
 - 1.8 to 5.5 V (during reading)
 - 2.7 to 5.5 V (during writing)
- Sequential read capable
- Write protection under low power supply voltage
- Protect function against write due to erroneous instruction recognition (S-93C46B/56B/66B/86B)
- Endurance:
 - Up to 10 million cycles (25°C)
 - 1 million cycles guaranteed (85°C)
- Data retention: 10 years (after 1 million rewrites)
- High temperature operation: Supports 105°C max.

*1. Cycles/word (Word: 16 bits)

HIGH-RELIABILITY, 3-WIRE SERIAL E²PROM WITH 125°C OPERATION GUARANTEED

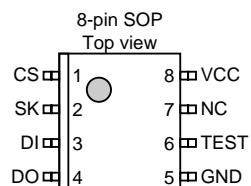

S-93A46A/56A/66A/86A

The S-93A46A/56A/66A/86A are high-temperature operation, high-speed, low-current-consumption 3-wire E²PROMs with a wide operating voltage range.

Depending on the product, the memory size is 1 Kb, 2 Kb, 4 Kb, or 16 Kb. The products are organized as 64 words × 16 bits, 128 words × 16 bits, 256 words × 16 bits, and 1024 words × 16 bits, respectively. Each is capable of sequential read, at which time addresses are automatically incremented in 16-bit blocks. The instruction code is compatible with the NM93CSxx. An endurance of 1 million cycles (85°C) is guaranteed and data can be retained for 15 years after 150,000 rewrites (at 125°C), making these highly reliable memories. A high tolerance under severe usage conditions also makes operation at high temperatures possible (operating temperature range: -40 to +125°C).

These products feature a function to prohibit writing during low-voltage supply and to protect against writing due to erroneous instruction recognition, making them ideal for storing important data.

■ PIN CONFIGURATIONS

S-93A66AD0A-J8T2GD (Wafer burn-in)
S-93A86AD0A-J8T2GD (Wafer burn-in)

■ FEATURES

- Low current consumption:
3.0 μA max. (Vcc = 5.5 V, during standby)
1.0 mA max. (Vcc = 5.5 V, during reading)
0.6 mA max. (Vcc = 2.7 V, during reading)
- Wide operating voltage range:
2.7 to 5.5 V (during reading)
2.7 to 5.5 V (during writing)
- Sequential read capable
- Write protection under low power supply voltage
- Protect function against write due to erroneous instruction recognition
- CMOS schmitt input (CS, SK)
- Endurance: 1 million cycles guaranteed (85°C)
- Data retention: 15 years (after 150,000 rewrites (at 125°C))
- High temperature operation:
Operating temperature -40 to 125°C

*1. Cycles/word (Word: 16 bits)

*2. After 150,000 rewrites (at 125°C)

LOW VOLTAGE OPERATION, SUPER-SMALL PACKAGE 2-WIRE SERIAL E²PROM

S-24C02BP/04BP

The S-24C02BP/04BP are 2-wire, low voltage operation, low-power-consumption serial E²PROMs with a wide operating voltage range. Depending on the product, the memory size is 2 Kb or 4 Kb.

An endurance of 1 million cycles over a wide temperature range (-40 to +85°C) is guaranteed and data can be retained for 10 years after 1 million rewrites, making these highly reliable memories.

These products enable page write and sequential read. The use of a super-small 8-pin SNT¹ package and WLP² means that these memories are excellent for small and thin applications such as mobile devices.

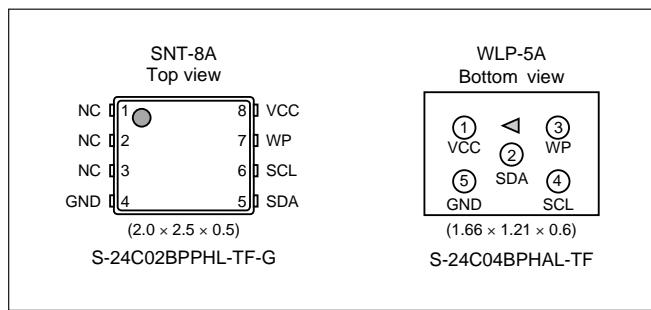

*1. Small-outline Non-leaded Thin package

*2. Wafer Level Chip Size Package

■ FEATURES

- Low current consumption: 1.0 μ A max.
(Vcc = 5.5 V, during standby)
0.8 mA max.
(Vcc = 5.5 V, during reading)
- Operating voltage range: 1.6 to 5.5 V (during reading)
1.8 to 5.5 V (during writing, S-24C02BP)
1.7 to 5.5 V (during writing, S-24C04BP)
- Page write:
- Sequential read
- Operating frequency: 400 kHz (Vcc = 4.5 to 5.5V)
- Endurance: 1 million cycles guaranteed (85°C)
- Data retention: 10 years (after 1 million rewrites)
- Write protection: 100%
- Package: SNT-8A (S-24C02BP)
WLP-5A (S-24C04BP)

LOW VOLTAGE OPERATION, SUPER-SMALL PACKAGE 3-WIRE SERIAL E²PROM

S-93L46A/56A/66A/76A

The S-93L46A/56A/66A/76A are low-voltage-operation high-speed, low-current-consumption 3-wire E²PROMs with a wide operating voltage range.

Depending on the product, the memory size is 1 Kb, 2 Kb, 4 Kb, or 8 Kb. It is organized as 64-word × 16-bit, 128-word × 16-bit, 256-word × 16-bit, and 512-word × 16-bit respectively. Each is capable of sequential read, at which time addresses are automatically incremented in 16-bit blocks. The instruction code is compatible with the NM93CSxx.

These highly reliable E²PROM memories feature a guaranteed endurance of 1 million cycles over a wide operating temperature range (-40 to +85°C), data retention of 10 years after 1 million rewrites.

Built-in data protection functions such as prohibiting write operations during low-voltage supply and protecting against write due to erroneous instruction recognition make these products ideal for storing important data.

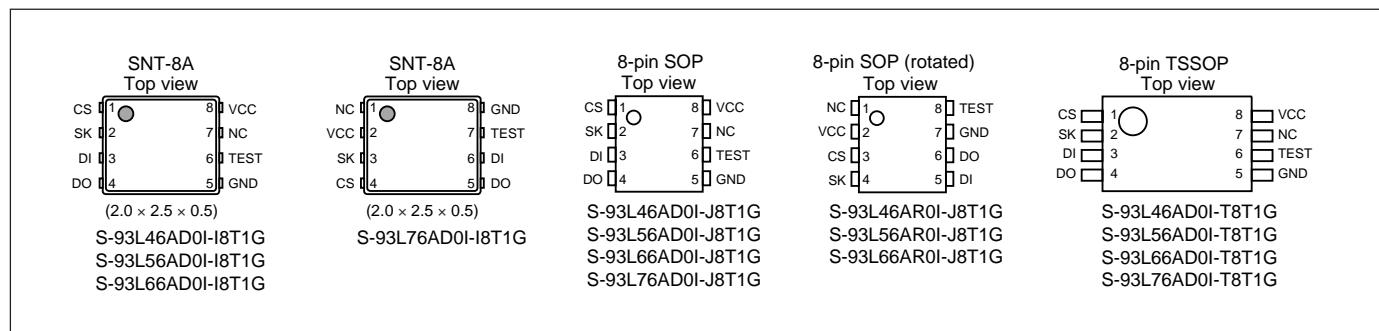

The use of a super-small SNT¹ package means that these memories are excellent for small and thin applications such as mobile devices.

*1. Small-outline Non-leaded Thin package

■ FEATURES

- Low current consumption:
 - 1.5 µA max. (Vcc = 5.5 V, during standby, S-93L46A/56A/66A)
 - 2.0 µA max. (Vcc = 5.5 V, during standby, S-93L76A)
 - 0.8 mA max. (Vcc = 5.5 V, during reading)
 - 0.4 mA max. (Vcc = 2.5 V, during reading)
- Wide operating voltage range:
 - 1.6 to 5.5 V (during reading)
 - 1.8 to 5.5 V (WRITE, ERASE)
 - 2.7 to 5.5 V (WRAL, ERAL)
- Sequential read capable
- Write protection under low power supply voltage
- Protect function against write due to erroneous instruction recognition (S-93L46A/56A/66A)
- Endurance:
 - Up to 10 million cycles (25°C)
 - 1 million cycles guaranteed (85°C)
- Data retention: 10 years (after 1 million rewrites)

0.5 μ A RAIL-TO-RAIL CMOS OPERATIONAL AMPLIFIER 1 Circuit S-89430A/89431A

The mini-analog series is a group of ICs that incorporate a general-purpose analog circuit in an ultra-small package. The S-89430/89431 are CMOS type operational amplifiers that feature Rail-to-Rail^{*1} I/O and an internal phase compensation circuit. These features enable driving at a lower voltage (from 0.9 V) and with lower current consumption (0.5 μ A typ.) than existing general-purpose operational amplifiers, making the S-8943xA/B series ideal for use in battery-powered compact portable devices.

The S-89430A/89431A series is a single operational amplifier, with one circuit incorporated in the ultra-small SC-88A.

*1. Rail-to-Rail is a registered trademark of Motorola, Inc.

V _{io} = 5 mV max.	S-89431ACNC-HBVTFG

■ SPECIFICATIONS

T_a = 25°C (typ.)

Product name	S-89431ACNC		
Absolute maximum rating	7 V		
Operating temperature range	−40 to +85°C		
Package	SC-88A		
Operating voltage	0.9 to 5.5 V		
Power supply voltage V _{DD}	At 0.9 V	At 1.8 V	At 3.0 V
Current consumption *1	0.9 μ A max.	0.9 μ A max.	0.9 μ A max.
Input offset voltage	5 mV max.	5 mV max.	5 mV max.
Input offset current	1 pA	1 pA	1 pA
Input bias current	1 pA	1 pA	1 pA
Common-mode input voltage range	0 to 0.9 V	0 to 1.8 V	0 to 3.0 V
Voltage gain (open loop)	75 dB	75 dB	80 dB
Maximum output voltage swing *2	V _{OH} 0.85 V min. V _{OL} 0.05 V max.	1.75 V min. 0.05 V max.	2.95 V min. 0.05 V max.
Slew rate	4.0 V/ms	4.5 V/ms	5.0 V/ms
Gain bandwidth product	5.0 kHz	5.0 kHz	4.8 kHz
Source current (V _{OUT} = V _{SS})	40 μ A min.	1.2 mA min.	4.8 mA min.
Sink current (V _{OUT} = V _{DD})	12 μ A min.	1.2 mA min.	4.8 mA min.

*1. Value with V_{IN} = V_{DD}/2 in voltage follower configuration

*2. R_L = 100 k Ω

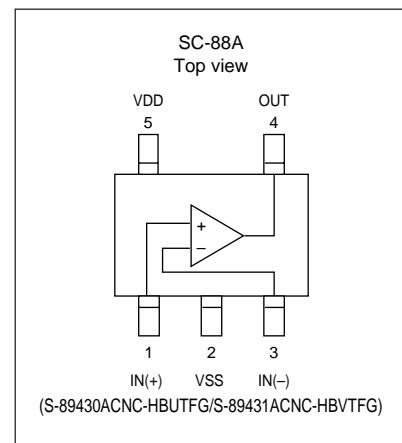

■ FEATURES

- Can be driven at lower voltage than existing general-purpose operational amplifiers: V_{DD} = 0.9 to 5.5 V
- Ultra-low current consumption: I_{DD} = 0.5 μ A typ.
- Rail-to-rail wide I/O voltage range: V_{CMR} = V_{SS} to V_{DD}
- Low input offset voltage: 5.0 mV max.
- No external devices required due to an internal phase compensation
- Small package SC-88A

■ APPLICATIONS

- Cellular phones, digital still cameras, PDAs, notebook PCs, digital camcorders

■ PIN CONFIGURATIONS

CMOS OPERATIONAL AMPLIFIER

The mini analog series is a family of ICs that integrate general-purpose analog circuits in ultra-small packages. The S-89110/89120 is a CMOS operational amplifier with a wide operating voltage range and ultra-low current consumption. The S-89110/89120 provides the best solution for battery-powered portable equipment.

1 Circuit S-89110A/89120A
► Under development 2 Circuits S-89110B/89120B

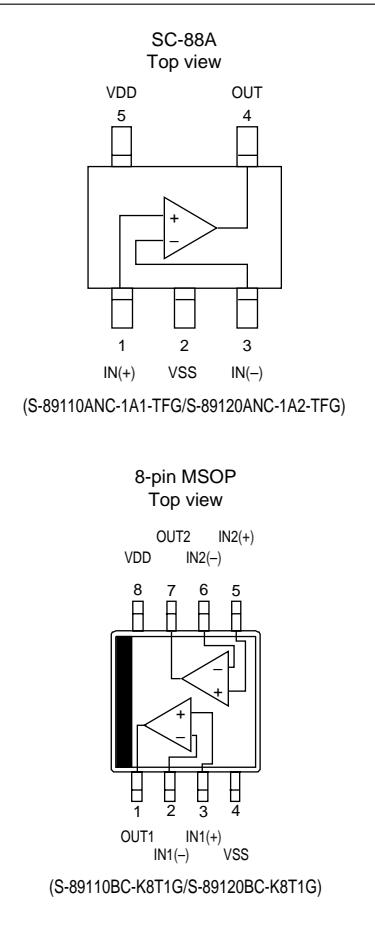

■ FEATURES

- Low operation voltage : V_{DD} = 1.8 to 5.5 V
- Low current consumption: I_{DD} = 50 µA (S-89110)
I_{DD} = 10 µA (S-89120)
- Low input offset voltage: 4.0 mV max.
- Small package:
SC-88A
8-pin MSOP (under development)

■ APPLICATIONS

- Cellular phones, PDAs, cameras, digital cameras, camcorders, notebook PCs

■ PIN CONFIGURATION

0.7 μ A RAIL-TO-RAIL CMOS COMPARATOR

1 Circuit S-89530A/89531A

The mini analog series is a family of ICs that integrate general-purpose analog circuits in ultra-small chip packages. The S-89530/89531 is a CMOS comparator with Rail-to-Rail^{*1} I/O. Since this series features low voltage drive and low current consumption compared with the conventional comparator, it is ideal for small battery-powered portable applications.

*1. Rail-to-Rail is a registered trademark of Motorola, Inc.

■ PIN CONFIGURATION

TEMPERATURE SWITCH IC

S-8130 series

The S-8130AA series is a temperature switch IC that contains a semiconductor temperature sensor with $\pm 2.5^\circ\text{C}$ temperature accuracy, and performs temperature detection. It operates from a power supply voltage of 2.2 V, and integrates a temperature sensor with a temperature coefficient of $-13 \text{ mV}/^\circ\text{C}$, a reference voltage generator, a comparator, a voltage detector, and a noise protection circuit in a single small 8-pin MSOP package. With an operating temperature range of -40°C to $+100^\circ\text{C}$ and excellent linearity compared with temperature sensors such as the conventional thermistor, this series is ideal for a wide range of temperature control applications. The detection temperature is set internally.

In the S-8130AC series, the detection temperature can be set by an external resistor.

■ BLOCK DIAGRAM (S-8130AA series)

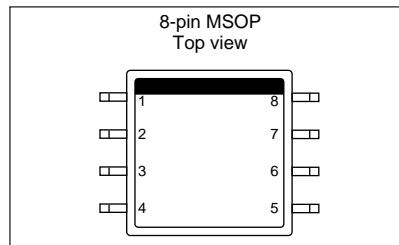

■ FEATURES

- Detection temperature accuracy: $\pm 2.5^\circ\text{C}$
($+60$ to $+95^\circ\text{C}$, in 5°C steps)
- Temperature voltage output based on Vss
- Low voltage operation: $V_{DD} = 2.2 \text{ V min.}$
- Low current consumption: $15 \mu\text{A typ.}$ ($+25^\circ\text{C}$)
- Logical output is fixed by the latch after temperature detection.
- Small package: 8-pin MSOP
- Error prevention circuit for temperature detection built in

■ PIN CONFIGURATION

(common to S-8130AA/AC series)

Pin No.	Symbol	Description
1	VDD	Positive power supply pin
2	DET	Setting temperature detection output signal (active high)
3	CD2	Delay time setting capacitor connection pin for voltage detection circuits
4	CD1	Capacitor connection pin for error prevention time setting
5	VSS	Ground pin
6	RESET	Reset I/O pin (active low)
7	RT	Reference voltage input pin
8	VOUT	Reference voltage output pin for built-in comparator

■ SELECTION GUIDE

S-8130AA series

Product name	Detection temperature TDET	DET output	Release voltage VRET	RESET
S-8130AAAFN-MAAT2G	80°C	Active high	2.4 V	Pull up
S-8130AACFN-MAET2G	86°C	Active high	2.9 V	Pull up

S-8130AC series

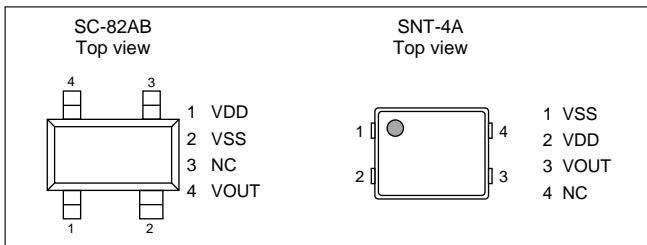

Product name	DET output	Release voltage VRET	RESET
S-8130ACAFN-MACT2G	Active high	2.4 V	Pull up

TEMPERATURE SENSOR IC

The S-8110C/8120C series is a family of high-precision temperature sensor ICs on a single chip with a linear output voltage for temperature changes. Each chip is composed of a temperature sensor, a constant current circuit, and an operational amplifier. It can be used at temperatures ranging from -40°C to $+100^{\circ}\text{C}$. These devices have much better linearity than other temperature sensors such as thermistors, and can be used for a wide range of temperature control applications.

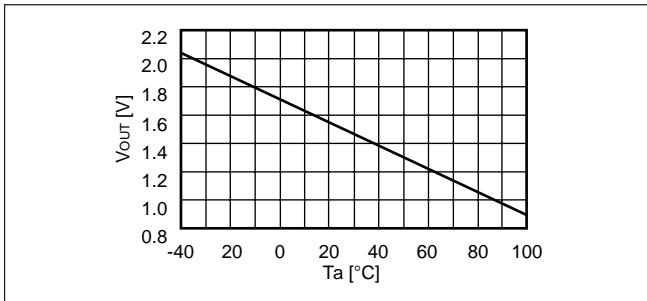

■ PIN CONFIGURATIONS

■ SPECIFICATIONS

Item	Operating voltage range	Temperature sensitivity (typ.)	Output accuracy	Linearity	Operating temperature range	Current consumption (typ. $\text{Ta}=+25^{\circ}\text{C}$)	Package

■ TEMPERATURE (Ta) VS. OUTPUT VOLTAGE (Vout) CHARACTERISTICS GRAPH (TYPICAL DATA)

■ FEATURES

- Linear output voltage for temperature change
- Low current consumption
- Built-in operational amplifier
- Vss based output
- Compact package:
 - SC-82AB
 - SNT-4A

■ APPLICATIONS

- High-frequency circuits such as cellular phones and radio equipment
- Compensation of oscillation frequency in crystal oscillator
- LCD contrast compensation
- Temperature detection in battery management
- Compensation of amplifier gain
- Heat prevention for charged batteries or halogen lights
- Compensation of auto focus circuits

LINEAR IMAGE SENSOR IC FOR CONTACT IMAGE SENSOR

S-86xx

The S-86xx series are linear image sensor ICs ideal for multi-chip contact image sensors. These devices synchronize analog image signals received from the light receiving element with the clock and output them sequentially. Three models are available: the S-8605B series, which uses phototransistors as the light receiving element, and the S-8665BWI, which use photodiodes as the light receiving element.

The S-8605B series and S-8665BWI also operate on a 3.3 V single power supply.

■ FEATURES

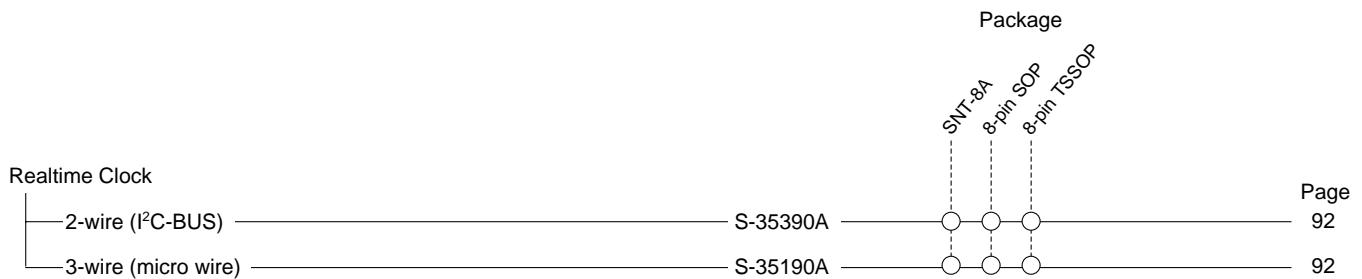

- Reading widths supporting various sizes.
 - Can be used to read various document sizes by changing the number of linearly arranged chips.
- Double-input drive (SI and CLK)
 - Easy to start using start and clock signals.
- Fast operation
- Low voltage operation: 3.3 to 5 V single power supply (S-8605B series/S-8665BWI)
- Photodiode light receiving element with good picture quality (S-8665BWI)

■ SPECIFICATIONS

Product name	Resolution	Reading width	Light receiving element	Clock frequency	Output amplifier	Densitvity	Format
S-8605BWI	8 dpi	12.00 mm	Photo-Tr	2.0MHz	Integrated	15V/lx*s	Wafer
S-8605BWI01	8 dpi	12.00 mm	Photo-Tr	2.0MHz	-	7V/lx*s	Wafer
S-8665BWI	600 dpi	19.79 mm	Photo-Di	5.0MHz	Integrated	95V/lx*s	Wafer

REALTIME CLOCK, PROGRAMMABLE PORT CONTROLLER, MINI LOGIC

Realtime Clock Lineup

Programmable Port Controller Lineup

Mini Logic Lineup

REALTIME CLOCK**S-35190A/35390A**

The S-35190A/35390A are low-current-consumption CMOS realtime clock ICs that feature a wide operating voltage range (1.3 V to 5.5 V) and can be driven on a variety of supply voltages, from a main supply to a backup supply. The time keeping current consumption of 0.25 μ A and minimum time keeping operation voltage of 1.1 V enable greatly increased battery duration.

In a system that operates on a backup battery, the free register incorporated in the realtime clock can be used for the user backup memory function. This user register can hold data on a supply voltage as low as 1.2 V (min.), so the data stored in the register before the main power supply was cut can be called any time after the voltage is restored.

These products also include a clock adjustment function that enables wide-ranging correction of deviation in the frequency of the crystal oscillator at a minimum resolution of 1 ppm. Also, by combining this function with a temperature sensor, the clock adjustment value can be set in accordance with changes in the temperature, which makes it possible to realize a clock function that retains a high degree of accuracy regardless of temperature variation.

■ FEATURES

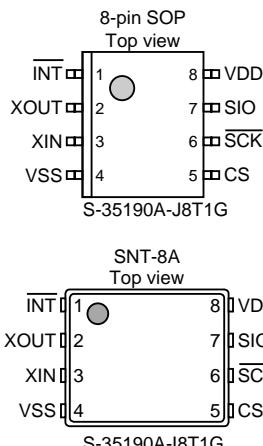

- Low current consumption: 0.25 μ A typ.
($V_{DD} = 3.0$ V, $T_a = 25^\circ\text{C}$)
- Wide operating voltage range: 1.3 to 5.5 V
- Minimum time keeping operation voltage: 1.1 V typ.
- Built-in clock adjustment function
(minimum resolution: 1 ppm or 3 ppm)
- Built-in free user register
- 3-wire (micro wire) CPU interface (S-35190A)
- 2-wire ($\text{I}^2\text{C BUS}$) CPU interface (S-35390A)
- Built-in alarm interrupter
- Built-in flag generator at power down or power on
- Auto calendar up to the year 2099, automatic leap year calculation function
- Built-in constant voltage circuit
- Built-in 32 kHz crystal oscillator (Cd built in, Cg external)
- Package: 8-pin SOP, 8-pin TSSOP, SNT-8A

■ APPLICATIONS

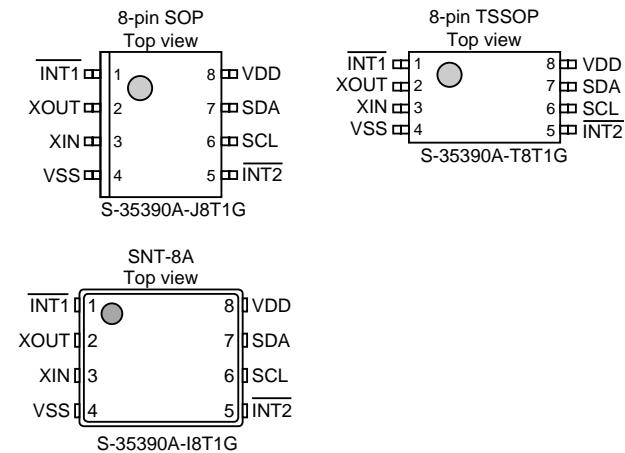

- Digital still cameras
- Digital video cameras
- Electronic voltmeters
- DVD recorders
- TVs, radios
- PHS
- Mobile phones
- Car navigation

PROGRAMMABLE PORT CONTROLLER (PORT EXPANDER WITH BUILT-IN E²PROM CIRCUIT)

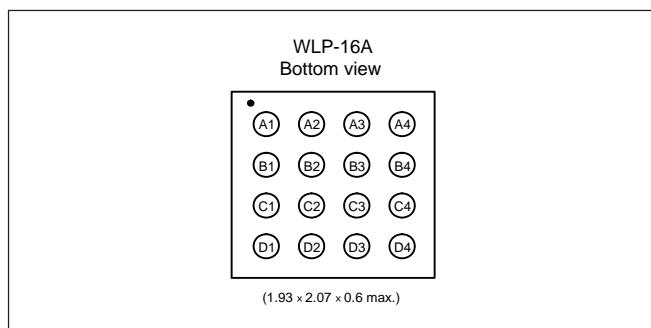

▶ NEW S-7750B

The S-7750B is a programmable port controller IC comprising E²PROM, a data output controller, a circuit to prevent malfunction during low supply voltage, etc.

It operates at 400 kHz and interfaces with external devices via the I²C BUS. High and low of the 8-channel digital output, and the delay time of each channel can be controlled by serial signals.

Initial value, and reverse delay time can be set for the 8-channel digital output pins, respectively for each port. This is effective for controlling turning on or off the voltage regulator in mobile phones. The built-in E²PROM allows the initial value of each control setting to be retained when power is off.

■ PIN CONFIGURATIONS

■ FEATURES

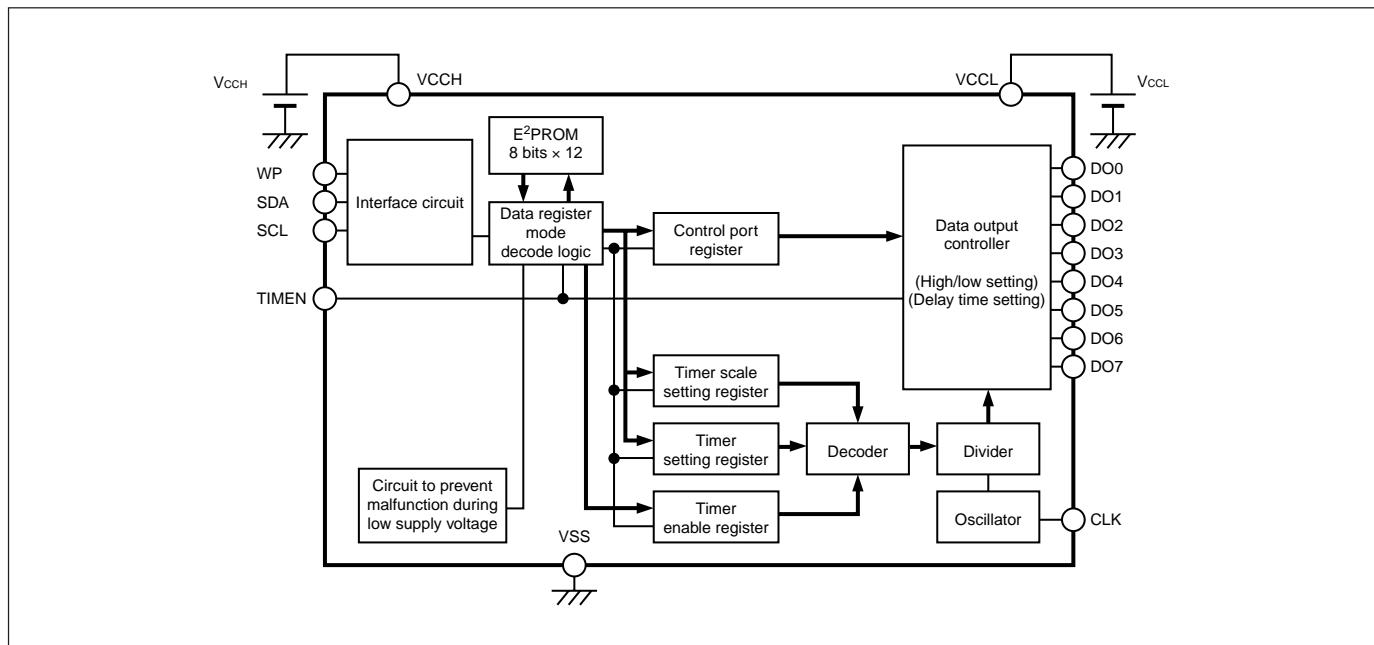

- Operating voltage range: 2.3 V to 4.5 V
- 8-channel digital output
- Operating frequency: 400 kHz
- Malfunction prevention function at low supply voltage
- Low current consumption During standby: 3.0 μ A max. ($V_{CC} = 4.5$ V)
- Built-in E²PROM circuit
- E²PROM endurance: 10^5 cycles (at -40 to +85°C)
- E²PROM write protect function

■ APPLICATIONS

- The voltage regulator turns on or off control in mobile phones

Pin No.	Symbol	Description
A1	CLK	External clock input
A2	SCL	Serial clock input
A3	WP	Write protect input
A4	VCCH	Power supply
B1	DO7	Output port 7
B2	VSS	Ground
B3	SDA	Serial data I/O
B4	DO0	Output port 0
C1	DO6	Output port 6
C2	TIMEN	Timer enable input
C3	DO3	Output port 3
C4	DO1	Output port 1
D1	DO5	Output port 5
D2	DO4	Output port 4
D3	VCCL	Power supply for output port
D4	DO2	Output port 2

■ BLOCK DIAGRAM

MINI LOGIC SERIES**S-75V/75L series**

The mini logic series features one standard logic gate in a super small package and plays a complimentary role for the input/output signals of microcomputers, gate arrays and so on. The S-75V series realizes high speed operation compatible with LSTTL. The S-75L series can operate between 1.0 V to 3.6 V, making it suitable for small battery-powered portable equipment.

■ FEATURES

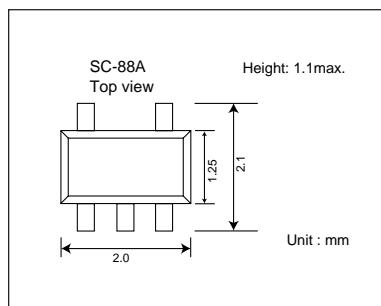

- Wide operating power supply range: 2.0 V to 5.5 V (S-75V series)
1.0 V to 3.6 V (S-75L series)
- Low current consumption: 1.0 μ A max. (5.5 V, 25°C) (S-75V series)
- All inputs have power down protection function
- Super-small package: SC-88A

■ APPLICATIONS

- Cellular phones, PHS, PDAs, cameras, digital cameras
- Camcorders, pagers
- PCs, notebook PCs and peripheral equipment

- The information herein is subject to change without notice.
- Neither reproduction, duplication nor unauthorized use of this catalog in whole or part is allowed without the prior written approval of Seiko Instruments Inc.
- The colors of the products reproduced herein ("Products") may be different from the actual colors. Check colors on actual products before using the Products.
- Circuits and respective application methods described herein are for reference only. Seiko Instruments Inc. shall not be liable for any damages or losses resulting from any claim by third parties that any Products or application methods described herein infringe any right intellectual property right. All intellectual property rights with respect to the Products belong exclusively to Seiko Instruments Inc. Seiko Instruments Inc. does not grant users of the Products any right or license to the Products hereunder.
- When Products include Strategic Products (or Services) stipulated in the Foreign Exchange and Trade Control Law, they shall not be exported without permission of governmental authorities.
- The Products are designed for consumer equipment and cannot be used as part of any device or equipment which influences the human body or requires a significantly high reliability, such as physical exercise equipment, medical equipment, disaster prevention equipment, gas related equipment, vehicles, aircraft and equipment mounted on vehicles.
- Although Seiko Instruments Inc. exerts the greatest possible effort to ensure high quality and reliability, the failure or malfunction of semiconductor products may occur. The user of these products should therefore give thorough consideration to safety design, including redundancy, fire-prevention measures, and malfunction prevention, to prevent any accidents, fires, or community damage that may ensue.

Environmental Activities at Seiko Instruments Inc. Semiconductor Division

SII Group Environmental Policy: Environmental Concept

As a good corporate citizen, the SII Group will continue to harmonize its corporate activities with the global environment, protect and improve the environment, and contribute to the establishment of a sustainable society that can coexist with all living things.

In line with the environmental policies of the SII Group, the Semiconductor Division of SII not only develops environmentally conscious products, but also makes every effort to implement energy-saving measures, reduce the amount of waste, and effectively utilize paper resources.

– Specific Actions Taken by the Semiconductor Division of SII to Protect the Environment –

1. Energy Saving

♣Producing energy-saving products

We promote the development of energy-efficient (low power consumption) products by utilizing the features of CMOS ICs.

♣Creating more energy-efficient manufacturing processes

We are creating more energy-efficient manufacturing processes at our semiconductor manufacturing sites.

2. Zero Emissions (Elimination of Waste Sent to Disposal Site)

We are achieving a reduction in waste by actively promoting recycling of materials used in the semiconductor manufacturing process, such as etching solution, washing water, and packing materials.

Waste reductions are also being achieved in our office, where staff are encouraged to not only sort garbage for recycling, but also to actively recycle the paper they use in daily operations.

3. Chemical Materials Management

♣Activities to reduce the impact of chemical substances

SII Semiconductor Division has been an industry leader to stop the use of ozone-layer depletion materials :

- SII discontinued specific fluorine in August 1992 ;
- SII discontinued Trichloroethane in November 1993 ;
- SII discontinued organic chloride solvents in March 1999 ;
- SII discontinued alternative fluorine HCFC-141b (a global warming factor gas) in March 2000.

We continuously review our processes to reduce chemical materials which are harmful to our global environment.

♣Lead-Free Soldering

The plating on the outer leads of our semiconductor devices has been lead-free since December 2003.

4. Design of Environmentally Conscious Products

♣Implementation of environmental assessments

Products to be newly developed undergo stringent environmental assessments. These assessments involve checking whether the product contains any banned or regulated substances. An MSDS (Material Safety Data Sheet) is also obtained so that we can evaluate the environmental impact and safety of the product, and thereby reduce the impact of that product on the environment.

5. Green Purchasing

We observe the "Green Purchasing Guidelines" set by the SII Group to promote green purchasing in cooperation with our suppliers.

All Products Are Lead-Free and Compliant with the RoHS Directive

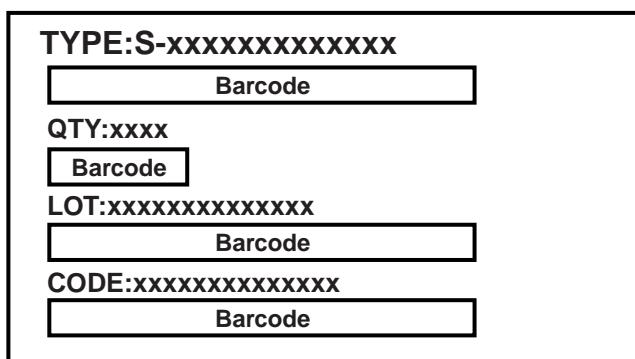

The products in this catalog are all lead-free.

- The products in this catalog are all lead-free and the 6 banned materials regulated by the RoHS Directive^{Note} (cadmium, hexavalent chromium, mercury, lead, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE)) are not used.
- The electrical characteristics, mechanical characteristics, and packages of the lead-free products in this catalog are the same as the leaded products. (The only change is that the pin leads are lead-free plated.)
- SII lead-free products have part numbers with a "G" suffix, except for the following products.
 - Some lead-free product part numbers have "GB", "GD", or "GZ" suffixes.
 - Although the products having WLP, SNB, or PLP packages do not have part numbers with the "G" suffix, they are all lead-free.

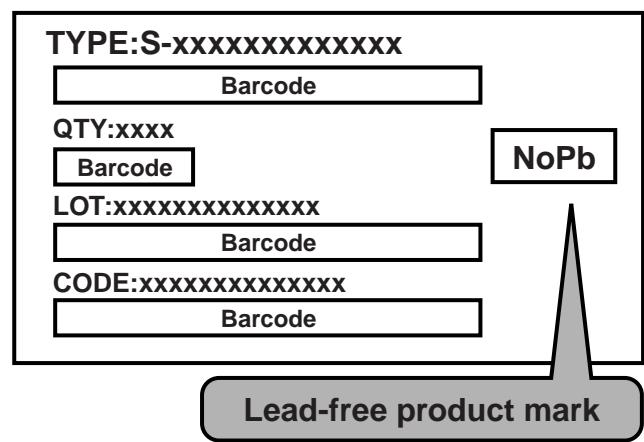

– For Customers Already Using SII Products –

The barcode labels attached on the inner boxes and reels can be used to distinguish lead-free products from leaded products.

Barcode label for leaded products

Barcode label for lead-free products

Note RoHS Directive: The restriction of the use of certain hazardous substances in electrical and electronic equipment

The RoHS Directive, adopted by the European Parliament and the European Council, restricts the use of the following materials for electrical and electronic equipment put on the market in Europe from July 1, 2006.

Hg (mercury), Cd (cadmium), Pb (lead), Cr⁶⁺ (hexavalent chromium), PBB (polybrominated biphenyls), PBDE (polybrominated diphenyl ethers)

TAKUMI, only achieved by the finest artisans and craftsmen in Japan's long history. Based on our 60 years history of precision watch manufacturing, SII embodies TAKUMI as the core of our DNA. Our TAKUMI spirit comes to life in all of our components through lower power consumption, high precision and continuous commitment to challenge and improve.

The Semiconductor Division of Seiko Instruments Inc. who manufactures the products described in this catalog holds the QS-9000 quality management system certificates, and the ISO-14001 environmental management system certificate.

Be sure to dispose of products described in this catalog in accordance with the laws and local ordinances of your county.
